COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., JANUARY, 1905. No. 1.

## PROGRESS OF FARM WORK.

The weather was quite favorable for farm work usual to the season, during the greater portion of January, over the eastern and central counties, but the ground was either too wet, or was frozen over the extreme western ones making farm work impracticable.

The month was slightly cooler than usual up to the 25th, and was very cold, with a cold wave, from the 25th to its close. The cold wave caused below freezing temperatures to the coast and lower temperatures in the interior than any recorded since February 1899. The freezing weather was very damaging to truck along the coast, killing all but the hardiest varieties, such as lettuce.

The precipitation was copious, and about normal, over the northwestern counties, and was deficient in all other portions, amounting to less than an inch in some of the southern counties. It was practically all in the form of rain.

Wheat was not damaged by the cold wave, but oats were seriously injured in a number of localities. It is not thought that fruit trees were affected as the previous low temperature had prevented budding, and it was not cold enough to injure the trees themselves.

Considerable plowing was accomplished in the eastern and central counties, and some spring oats were sown, but scarcely any work of this kind was done in the western counties.

While country roads were not in extremely bad condition generally, there was a much smaller quantity of commercial fertilizer hauled than is usual to this month. Some fields were plowed and bedded for corn and cotton, although this work was practicable only in a few localities.

Barometer and Wind Table for January, 1905.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for January, 1905, was 41.4°, which is 4.3° below normal. The highest local mean was 47.3° at Beaufort; the lowest was 33.8° at Greenville. The monthly extremes were a maximum of 77° at Walterboro on the 1st and 12th, and a minimum of 8° at Greenville on the 26th, making the State range 69°. The greatest local range was 64° at Conway and Dillon, the least was 39° at Clemson College. The mean of the daily maximum temperatures was 51.5°, and of the daily minimum temperatures was 31.2°, making the average daily range 20.3°.

Ice.—The lake at Conway froze over on the 27th, and remained frozen to the 29th.

Precipitation, in Inches.

The precipitation averaged 2.00 inches, which is 1.57 below normal. The greatest local amount was 4.84 at Walhalla, the least was 0.30 at St. George. The greatest 24-hour fall was 2.65 at Walhalla on the 12th. The average number of days with 0.01 inch, or more, of precipitation was 7, ranging from 1 at Allendale to 10 at Gaffney, Saluda and Spartanburg.

Excessive Precipitation.—Walhalla, 12th, 2.65 in 24 hours. Sleet.—Sleet was noted at Cheraw on the 3rd, Lugoff, 7th; Walhalla, 9th, 24th.

Snow.—Snow fell at Barksdale and Little Mountain on the 3rd; Bowman, Charleston, Columbia, Dillon, Florence, Georgetown, Heath Springs, Lugoff, Seivern, Stateburg and Summerville on the 7th; Batesburg, 6th, 7th; Greenville, Winthrop College, Yorkville on the 30th; Liberty, 7, 9, 10, 29, 30th; Newberry, 3, 6, 7th; Spartanburg, 6, 7, 29th; Walhalla, 7, 28th. The greatest depth was 1.0 inch at Gaffney and Greenville.

Weather.—The average number of clear days was 15, of partly cloudy ones 6, and of cloudy ones 10.

Winds.—The prevailing direction of the wind was from the west at 16 stations, from the southwest and northwest at 11 each; from the north at 5; from the northeast and east at 3 each.

High Winds.—Bowman, 3, 25; Clarks Hill, Liberty, Little Mountain, 25; Columbia, 3, 6, 7, 12, 14, 25, 26; Georgetown, 26; Heath Springs, 24, 25; Lugoff, 4, 25; Saluda, Spartanburg, 24; Society Hill, 3, 6, 7, 24, 25; Summerville, 3, 7, 24, 25; Yorkville, 3, 7.

## MISCELLANEOUS PHENOMENA (with dates).

Thunderstorms.—Stateburg, 6th.

Solar Halos.—Charleston, 1 (?); Santuc, 18; Stateburg, 5, 18, 27th.

Lunar Halos.—Beaufort, 21st; Charleston, 3, (dates not given); Little Mountain, 22nd; Santuc, 19, 21st; Stateburg, 17, 18, 21st.

Fogs, Dense.—Barksdale, 24th; Beaufort, Heath Springs, 13th; Charleston, 13, 19th; Columbia, 13, 19, 20th; Greenville, 10, 19, 24th; Liberty, 13, 19, 20, 21, 24th; Little Mountain, Stateburg, 19, 20th; Newberry, 20, 24th; Saluda, 20th; Santuc, 11, 12, 13, 20; Yemassee, 30th; Yorkville, 6, 12, 13, 19, 20, 24th.

## REMARKS BY OBSERVERS.

AIKEN.—The month was colder than usual, but with less precipitation. BARKSDALE.—Very little farm work was done, as the ground was either too wet or was frozen; oats were killed out to some extent. BATESBURG.—Very little farm work was done, and only small quantities of fertilizers hauled; all grain crops look well, and the acreage is large.

BEAUFORT.—The mean temperature was 3° below normal, and the precipitation 0.91 below. The cold wave on the 26th did much damage to all growing truck; oats were not much damaged. The temperature was lower than in any January since the station was established, in 1889. BOWMAN.—January was remarkably cold, with little or no pleasant weather during the month. About the usual amount of farm work has been done. Small grain crops not promising, as late plantings were injured by cold. HEATH SPRINGS.—Notwithstanding that the temperature was very low this January, very little oats were killed. Some oats were sown to the end of the month. LIBERTY.—No plowing was done during the month, as the ground was unfit the whole time; small grain crops were frozen, but do not appear to be seriously injured. The month as a whole was very cold. LITTLE MOUNTAIN.—Stubble lands were plowed and some oats were sown during the latter part of the month. LUGOFF.—The night of the 25th was the coldest in a number of years. Some oats were injured by freezing. NEWBERRY.—A dry and cold month. Some oats were sown and much plowing was done. SANTUC.—The month was mostly cloudy or partly cloudy, and had rapidly fluctuating temperatures, and was generally unfavorable for crops. There were many fogs, but the precipitation was light. STATEBURG.—The temperature, to the last week, was moderately but steadily cold. The cold wave of the 24th-27th caused the lowest temperature of the season. Some desultory work was done in preparation for the next seasons crops, although but little was accomplished. TRENTON.—The precipitation was 2.16 inches less than the normal for January. Oats were badly damaged by freezing.

#### PHENOLOGICAL OBSERVATIONS.

Observations made at Weather Bureau and voluntary observers' stations show that there is a steady progressive movement, from the south northward in the spring, of mean temperatures above the active growing point. This movement averages about 13 miles a day along the Atlantic coast. Inland the rate of progression is less regular and less subject to latitude; there elevation above sea-level becomes an important factor, while the general topography and the soil are modifying conditions to promote or retard the fitness of the ground for cultivation, and, in warmth, for the favorable germination of seeds. Each locality has its own peculiarities in this respect, but in a general way, and for comparative purposes, phenological observations at any one place will afford data for a large surrounding territory.

For the year 1904 there were only four phenological reports rendered as follows: from Charleston, from Dillon in Marion county, from Lugoff in Kershaw county and from Newberry, Newberry county. The report from Dillon was not as full as the other three. The three full reports were quite full and if they afford insufficient data for generalization, they do show the possible utility of a long series of these reports, and mark an encouraging beginning.

Following the order in which the respective subjects are stated on the Forms, it is found that forest trees are only in a general way an index of the earliness of a season or of the setting in of autumnal decay. The trees selected, by suggestions from interested observers, were the poplar for the early leafing variety, hickory for the medium and blackgum for the late. Other varieties were substituted in the Charleston report making comparison with the earliest section impossible. The first poplar leaves were noted at Lugoff on March 8th, in Newberry on the 13th. In the Dillon report simply March was given without a definite date. Poplar trees were green at all the places by April 4th, showing a more rapid growth in the western part of the State. In Newberry

the leaves began coloring on September 15th, and by the 25th at Lugoff. The trees were bare at practically the same date in October at all points, due, no doubt, to the occurrence of killing frosts.

The hickory trees present the peculiarity of leafing earlier in the western parts than in the eastern, but this may be due to the variety selected for observation, rather than to climatic influence. The same condition was noted with the blackgum tree. It is perhaps worthy of note that the leaves of all three varieties began coloring about the same time. The first leaves of nearly all varieties of cultivated fruit trees began to appear about the same time in all parts of the State, with but a few days advance at Charleston on March 8th, to the 15th at Newberry.

Sporadic blooms of fruit trees were noted very early at Charleston. Peaches were in full bloom by March 10th, strawberries on the 21st and blackberries on the 29th; apples, pears, plums and cherries were between the extremes given. At Lugoff plums were the first to be in full bloom on March 10th, followed by peaches on the 15th, pears on the 26th, strawberries on the 30th, and blackberries on April 20th. At Newberry the progression was plums and peaches March 20th, pears 25th, strawberries April 1st, and blackberries May 1st. The observer at Newberry appends a note stating that usually plums bloom much earlier than peaches, but in 1904 the reverse was the case.

The time that harvesting began shows a wider range than the time of blooming. In Charleston the order was for strawberries March 26th, plums May 22nd, blackberries May 18th, peaches May 25th, apples May 15th, and for pears June 10th. At Lugoff the harvest time began with strawberries on May 1st, pears, plums and blackberries on June 1st, peaches June 19th, and apples June 12th. At Newberry harvest began with strawberries on May 1st, pears June 1st, peaches and plums June 5th, apples and blackberries June 10th. No mention is made in the report whether early, late or medium varieties were selected for observation, nor is it known that the same varieties are cultivated at all places, which may account for the earlier harvest at Newberry than at Lugoff, as the difference in climate of the two places would indicate the reverse.

An interesting feature of these reports is the observation on the yields and quality of these fruits and berries, and may be profitably studied in connection with the weather that prevailed during the first half of the year. Briefly stated, the winter was cold, with about an average amount of precipitation and no severe cold waves; the spring was cool, especially in April, with drought conditions in places from the middle of April to near the end of May. These months practically cover the period from blooming to harvest. In Charleston the yields were "large" except for apples and cherries which were "small". The quality of apples and cherries were "poor" and of all other fruits "good". At Dillon all were "good" except apples which were "poor" in both respects. At Lugoff the yields of apples, peaches and pears were "poor", plums, cherries and strawberries "good", and of blackberries "fine". At this place the quality corresponded with the yields and was stated in the same terms. At Newberry the yields of apples, peaches, pears and strawberries were "good", of plums and cherries "poor". Here the quality differed slightly having been "good" for peaches, pears and strawberries, "fair" for apples and plums, and "poor" for cherries. It would be hasty generalization to say that the weather conditions favorable for large yields are also conducive to a better quality of fruit, but the results of last year's observations foreshadow such a conclusion.

In the February number of the Monthly Report, cereals, grasses, vegetables, etc., will be considered.

CLIMATOLOGICAL DATA FOR THE MONTH OF JANUARY, 1905.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
§ Exposed not standard. \* On other dates also. a indicates 1 day missing. b, 2 days, etc.  
¶ Temperature omitted, apparently too low.

CORRECTIONS.

In the December 1904, Monthly Report, page 5, the mean temperature at Society Hill 47.8° should be 42.8°, and the

reference note "apparently too low" should be omitted; at Allendale the reference note "apparently too high" should be "apparently too low and therefore omitted".

U. S. DEPARTMENT OF AGRICULTURE.

REPORT FOR FEBRUARY, 1905.

SOUTH CAROLINA SECTION

OF THE

CLIMATE AND CROP SERVICE

OF THE

WEATHER BUREAU.

PUBLISHED BY AUTHORITY OF THE SECRETARY OF AGRICULTURE.

PREPARED UNDER DIRECTION OF  
WILLIS L. MOORE,  
CHIEF OF WEATHER BUREAU.

BY

J. W. BAUER,  
SECTION DIRECTOR.

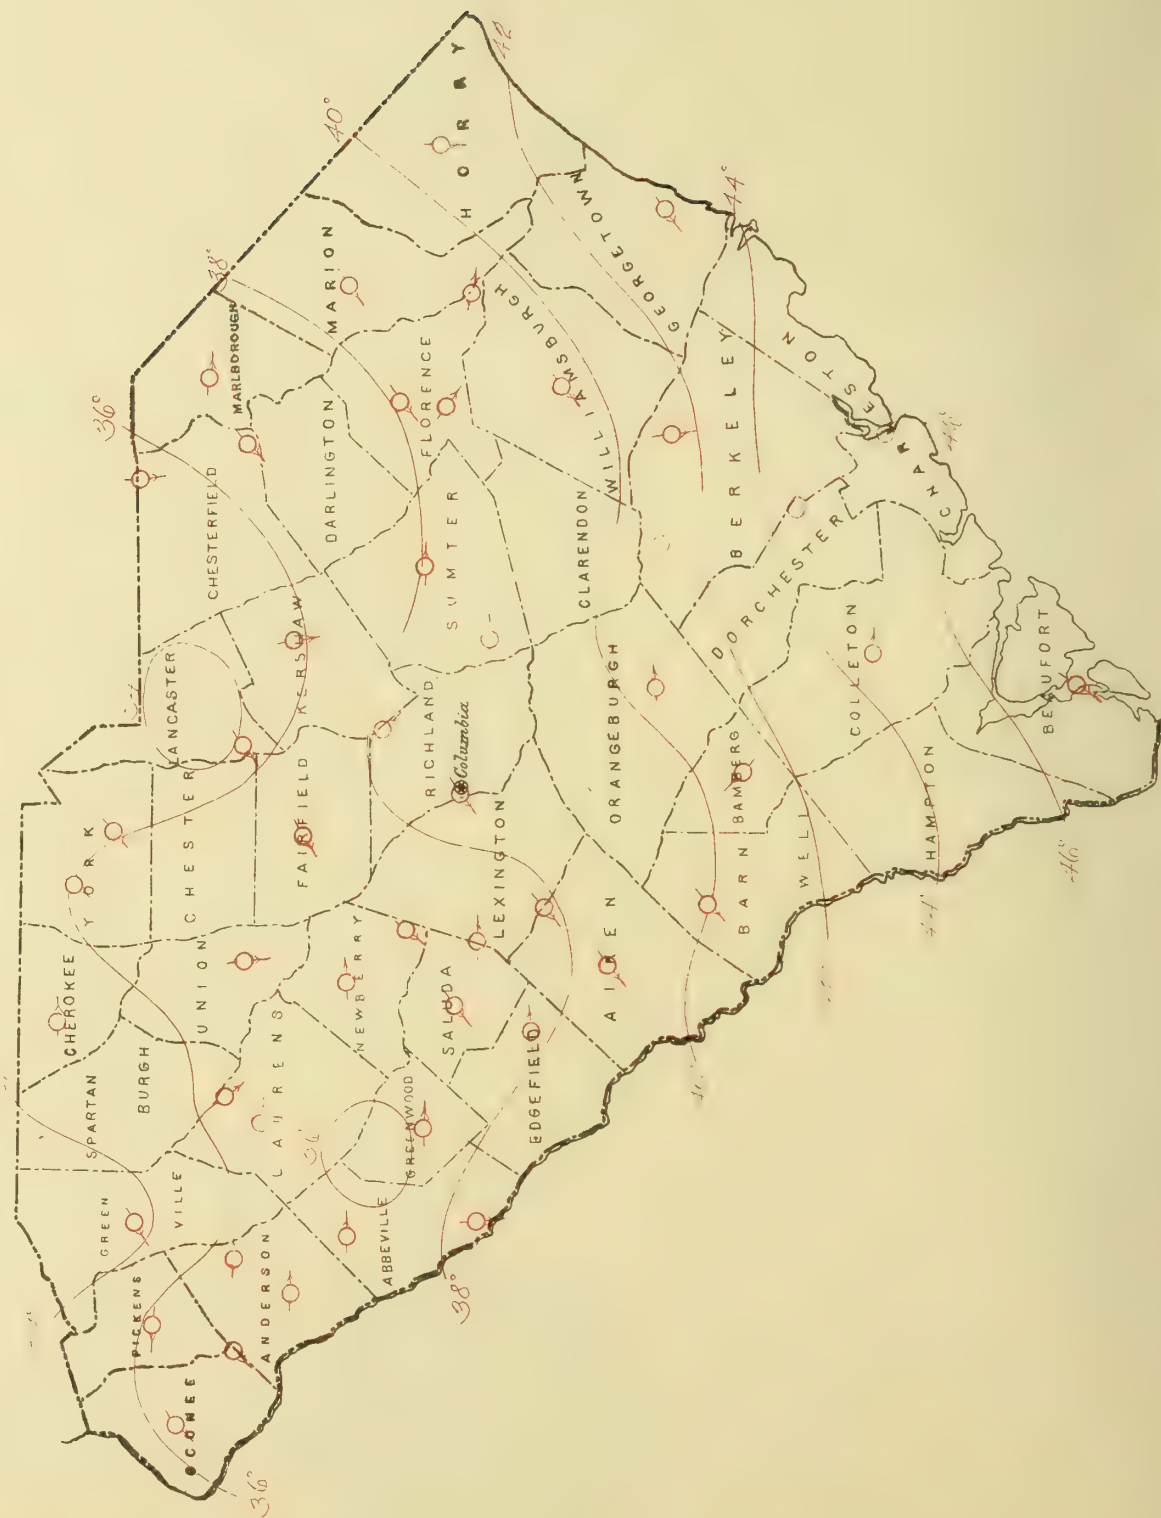

RALEIGH, N. C.  
WEATHER BUREAU OFFICE.

MARCH 23, 1905.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR FEBRUARY, 1905.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., FEBRUARY, 1905. No. 2.

## PROGRESS OF FARM WORK.

The month was unusually and persistently cold until about the 20th, after which mild, and pleasant, and dry weather prevailed to its close. The mean temperature compares closely with that for the same month in 1895, and these two are the coldest Februaries in the last 18 years.

The precipitation was copious over the whole State, and locally excessive, although the State average was but slightly in excess of the normal. During the first half much of the precipitation was in the form of snow, sleet and rain mixed, the rain generally freezing as it fell, and from this ice coating, melting as it did slowly, the larger portion soaked into the ground thoroughly saturating it. The soil was thus unusually well supplied with moisture.

The persistent cold, and the wet soil, prevented the prosecution of farm work, and little plowing was practicable except during the last week when rapid progress was made over the entire State. The delay in farm work was most serious over the coast trucking regions.

Reports on the damage to small grain, particularly to oats, agree in this, that some damage was done but they vary as to the extent of the injury. It will not be possible to estimate it until after active growth sets in. Some oats were killed outright and the fields have been re-sown. Wheat suffered scarcely any damage. The good effect of the steady cold weather was to retard the swelling of fruit buds, thus saving them from injury by probable frosts in March. The wet soil delayed the preparation of seed beds for tobacco, although some were burnt and seeded.

The month as a whole was unfavorable for the progress of farm work.

Barometer and Wind Table for February, 1905.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for February, 1905, was 38.9, which is 7.7° below normal. The highest local mean was 46.5 at Beaufort; the lowest was 33.5 at Greenville. The monthly extremes were a maximum of 72° at Yemassee on the 20th, and a minimum of 0° at Walhalla on the 14th, making the State range 72°. The greatest local range was 70° at Walhalla, the least was 45° at Bennettsville. The mean of the daily maximum temperatures was 48.0°, and of the daily minimum temperatures was 29.8°, making the average daily range 18.2°.

## Precipitation, in Inches.

The precipitation averaged 5.21 inches, which is 0.87 above normal. The greatest local amount was 8.20 at Blackville, the least was 2.87 at Barksdale. The greatest 24-hour fall was 3.26 at Blackville on the 12th-13th. The average number of days with 0.01 inch, or more, of precipitation was 9, ranging from 4 at Allendale, Clemson College and Trial to 13 at Columbia.

Excessive Precipitation.—Allendale, 12th, 3.20 in 24 hours; Blackville, 12th-13th, 3.26 in 24 hours; Clemson College, 20th, 2.60 in 24 hours; Edisto, 12th, 2.60 in 24 hours; Florence, 12th, 3.00 in 24 hours; Liberty, 20th, 2.50 in 24 hours; St. Matthew, 12th-13th, 3.00 in 24 hours; Sumter, 11th, 3.00 in 24 hours; Trial, 12th-13th, 3.05 in 24 hours.

Snows.—Allendale, Trenton, 4th; Anderson, 2nd; Barksdale, 3, 4, 5, 13, 19; Bennettsville, 3; Cheraw, 4, 14; Columbia, Lugoff, Santuc, 13; Dillon, 3, 4, 5, 13; Gaffney, 3, 5, 7, 12; Liberty, 3, 5, 8, 19; Newberry, 13, 19; Saluda, 3, 4, 5, 6, 8, 9; Seivern, 6, 14, 20; Society Hill, 3, 19; Spartanburg, 3, 13; Walhalla, 5, 19, 20; Winthrop College, 3, 4, 12.

Sleet.—Aiken, Bennettsville, 3, 4, 5, 6; Allendale, Clarks Hill, Stateburg, Trial, Summerville, 3, 4, 5; Anderson, 2; Barksdale, 4, 5, 8, 12, 19; Batesburg, 4, 5, 6, 20; Beaufort, 12; Blackville, 3, 4, 5, 13, 19; Bowman, Walterboro, 4, 5; Cheraw, 5, 6, 8, 18; Columbia, 4, 5, 6; Dillon, Winthrop College, 8; Due West, 3, 6, 8, 9, 19; Florence, Sumter, 3; Gaffney, 3, 5, 7, 12; Heath Springs, 5, 7, 8, 13; Liberty, 5, 8, 12; Little Mountain, 3, 4; Lugoff, 3, 4, 5, 13; Newberry, 3, 4, 5, 7, 8, 19; Saluda, 4, 5, 13, 19; Santuc, 4, 5, 6, 8, 20; Seivern, 3, 4, 5, 6, 14, 20; Society Hill, 5, 7, 8; Spartanburg, 5, 8, 11, 20; Trenton, 4, 5, 8, 9; Walhalla, 5, 9, 11, 12, 20; Yorkville, 5, 6, 8, 9, 12, 20.

Weather.—The average number of clear days was 10, of partly cloudy ones 4, and of cloudy ones 14.

Winds.—The prevailing direction of the wind was from the northeast at 23 stations, from the west at 15, from the northwest at 7; from the north at 6, and from the east and southeast at 1 station each.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Santuc, 24; Stateburg, 7, 24, 27.

Lunar Halos.—Blackville, 9, 10; Charleston, 10; Little Mountain, 16; Santuc, 18.

Thunderstorms.—Bowman, 9, 12, 21; Georgetown, 20; Seivern, 13; Summerville, 12, 20. Summarized, there were 7 storms on 5 dates as follows: one on the 9th, two on the 12th, one on the 13th, two on the 20th, and one on the 21st.

Fogs, Dense.—Barksdale, 20; Beaufort, 11; Blackville, 6, 7, 8; Charleston, 5, 12; Columbia, 8, 9, 10, 12, 13, 21; Liberty, 6, 7, 9, 21; Little Mountain, 9, 21; Newberry, 7; Santuc, 9, 10, 21; Seivern, Walterboro, 23; Spartanburg, 6; Stateburg, 9, 10, 11, 12, 20; Yorkville, 9, 10, 13, 21.

## REMARKS BY OBSERVERS.

AIKEN.—A very cold month, with mean temperature  $10.6^{\circ}$  below the normal, and with 3.14 inches more than the average amount of rain. BARKSDALE.—The month closed warm and pleasant. Some gardening was accomplished. There was some sleet and snow on the ground until the 21st. BATESBURG.—No farm work or gardening was done, the soil having been too wet. Small grain did well. Very little fertilizer was hauled. BEAUFORT.—The mean temperature was  $6.3^{\circ}$  below normal, and the precipitation was 1.33 inches in excess. Cold and wet weather delayed work seriously on the truck farms. Potatoes were planted, green peas came up.—BOWMAN.—The month was remarkable for cold, cloudy and disagreeable weather. Small grain was seriously threatened, but very little was killed. Plum and pear trees began to bud. DILLON.—The month was unusually cold and wet. There were only two fine days, namely the 26th and 28th. The first dove appeared on the 27th. HEATH SPRINGS.—The temperature was below normal until the 18th. Small grains are backward; some oats were killed. But little farm work done. LIBERTY.—The month was unusually cloudy. No plowing and little farm work of any kind done, owing to severe weather. Small grain crop was seriously hurt by the freezing. There was no sign of spring. NEWBERRY.—The sleet that fell on the 3rd remained on the ground until the 25th. No farm work done. The month was cold. SANTUC.—The precipitation from the 4th to the 6th was in the form of rain and sleet, the rain freezing as it fell, causing an extraordinary heavy ice coating that broke many limbs from trees thus damaging orchards. The month closed mild. Bats were seen on the 28th. SEIVERN.—Severe weather during the month damaged small grains badly. SOCIETY HILL.—This was the coldest February since 1895. The oats crop was damaged, but not seriously. Preparations for crops are very backward. STATEBURG.—On account of the steady low temperature and frequent rains, quite heavy on the 12th, 13th and 20th, no farm work, in the preparation of lands, was accomplished until the last few days when mild weather prevailed. SUMMERVILLE.—Sleet gave an ice coating to all outdoor objects from the 3rd to the 6th. TRENTON.—Precipitation 0.32 less than normal, and 2.48 inches less than the average for the first two months. Farm work greatly delayed. Roads in bad condition for hauling commercial fertilizers. Some gardening was done. Fruit buds did not swell. YORKVILLE.—An abnormally cold and stormy month.

ERRATA.—December Monthly Report, page 5: Yemassee mean temperature  $48.1^{\circ}$  should be  $48.0^{\circ}$ ; St. George, mean temperature  $45.6^{\circ}$  should be  $45.4^{\circ}$ ; Dillon, mean temperature  $46.0^{\circ}$  should be  $44.2^{\circ}$ ; Heath Springs, mean temperature  $40.6^{\circ}$  should be  $40.8^{\circ}$ . Page 6: Yemassee, maximum temperature  $52^{\circ}$  should be  $49^{\circ}$  on the 28th, minimum  $58^{\circ}$  should be  $44^{\circ}$ , mean maximum  $58.2^{\circ}$  should be  $57.6^{\circ}$ , mean minimum  $38.6^{\circ}$  should be  $38.5^{\circ}$ ; St. Matthew, mean maximum  $54.1^{\circ}$  should be  $53.8^{\circ}$ ; St. George, maximum on the 5th,  $53^{\circ}$  should be  $65^{\circ}$ , on the 13th  $67^{\circ}$  should be  $57^{\circ}$ , on the 28th  $57^{\circ}$  should be  $42^{\circ}$ . Pages 5 and 8: Gaffney, total precipitation 3.61 should be 3.71.

## PHENOLOGICAL OBSERVATIONS.

The statements under this heading in the January number of the Monthly Report referred to vegetation controlled by nature unassisted, or to the expression of nature as to the earliness or lateness of the season, as manifested by leafing, budding and fruiting of trees and plants that do not require to be planted each year to produce their kind. In the current

article, the division of the phenological reports will deal with crops that are planted annually and whose season is the result of man's experience, and is, therefore, an artificial index, controlled largely by the varying judgment of different individuals, although still more largely by temperature and moisture conditions, and most frequently by the latter only. Temperatures have a limited and well established range each month, while rainfall, as it relates to tillage, ranges from none for long periods causing droughts, to excessive amounts that saturate the soil and render it unfit for cultivation. Seeds planted in a drought may lie dormant a long while before germinating, and if planted when the soil is too wet they are liable to rot before germinating, especially if the temperature is low. Thus temperature and rainfall may make the season early or late, as they are favorable or unfavorable. It is necessary, therefore, to consider carefully these weather elements in judging the advancement of the season and its relation to the crops, as well as the stages of crop development. It is seldom the case that the weather is so unfavorable as to change materially the established seasons for planting, and when once planted the successive stages of germination, growth, cultivation, blooming, fruiting and ripening or harvesting follow in about the same time intervals, from year to year, varying, of course, for different crops. These stages are, to a limited extent, influenced by the weather, but the time element is not so much affected as are the quality and yield.

The few phenological reports for 1904 record most of the principal commercial crops cultivated in South Carolina, and will be considered each by itself, although not in the precise order as stated on the Forms.

Beginning with corn, it is found that planting began near Charleston on March 10th and continued to July 25th; at Lugoff planting began March 30th, and at Newberry on March 20th. The preparation at all these places having been begun in February, as the weather permitted. At Lugoff it was in silk and tassel, generally, on July 1st. The other reports do not state the date of this stage of growth. Harvesting began at Charleston on June 1st, ended October 30th; at Lugoff began August 15th, ended November 1st; at Newberry began September 25th, ended December 1st. At all places both quantity and quality were "large" and "good" respectively.

The preparation of lands for oats began about the middle of September. Sowing ranged through about the same dates, from October 12th to December 15th. Harvesting began at Charleston on May 15th; at Lugoff on June 1st; and at Newberry about June 1st. In Charleston the yields were "small", attributable to the spring drought; at Lugoff "fair", and at Newberry "good". The quality corresponded with the yields at all places.

Cotton lands were first prepared at Lugoff on January 15th and at the other places after February 1st, as the weather and soil conditions permitted. Preparation ended at Charleston on April 15th, at Lugoff on April 20th, and at Newberry on June 1st. In the latter region some stubble lands, after oats, were planted to cotton. Planting began at Charleston on March 30th, ended April 20th; at Lugoff began April 8th, ended April 30th; at Newberry began April 5th, ended June 1st. At Charleston only the sea-island variety was noted, and picking began September 20th; at Lugoff on August 15th, and at Newberry on September 1st. Picking continued at all places into December. The yields were very "large" at Charleston, "medium" at Lugoff, and "large" at Newberry. The quality ranged from "good" to "excellent". At Lugoff blooms were first noted on July 1st; the others do not mention this stage.

[CONTINUED IN MARCH NUMBER].

## CLIMATOLOGICAL DATA FOR THE MONTH OF FEBRUARY, 1905.

| STATIONS.                             | Counties.    | Elevation—feet. | Length of record—years. | Temperature— in degrees Fahrenheit. |                            |          |       |         |       | Precipitation— in inches. |        |                            |                       |                             | Sky.               |                    |                            |                       |                               | Observers.             |

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also.

a indicates 1 day missing, b, 2 days, etc.

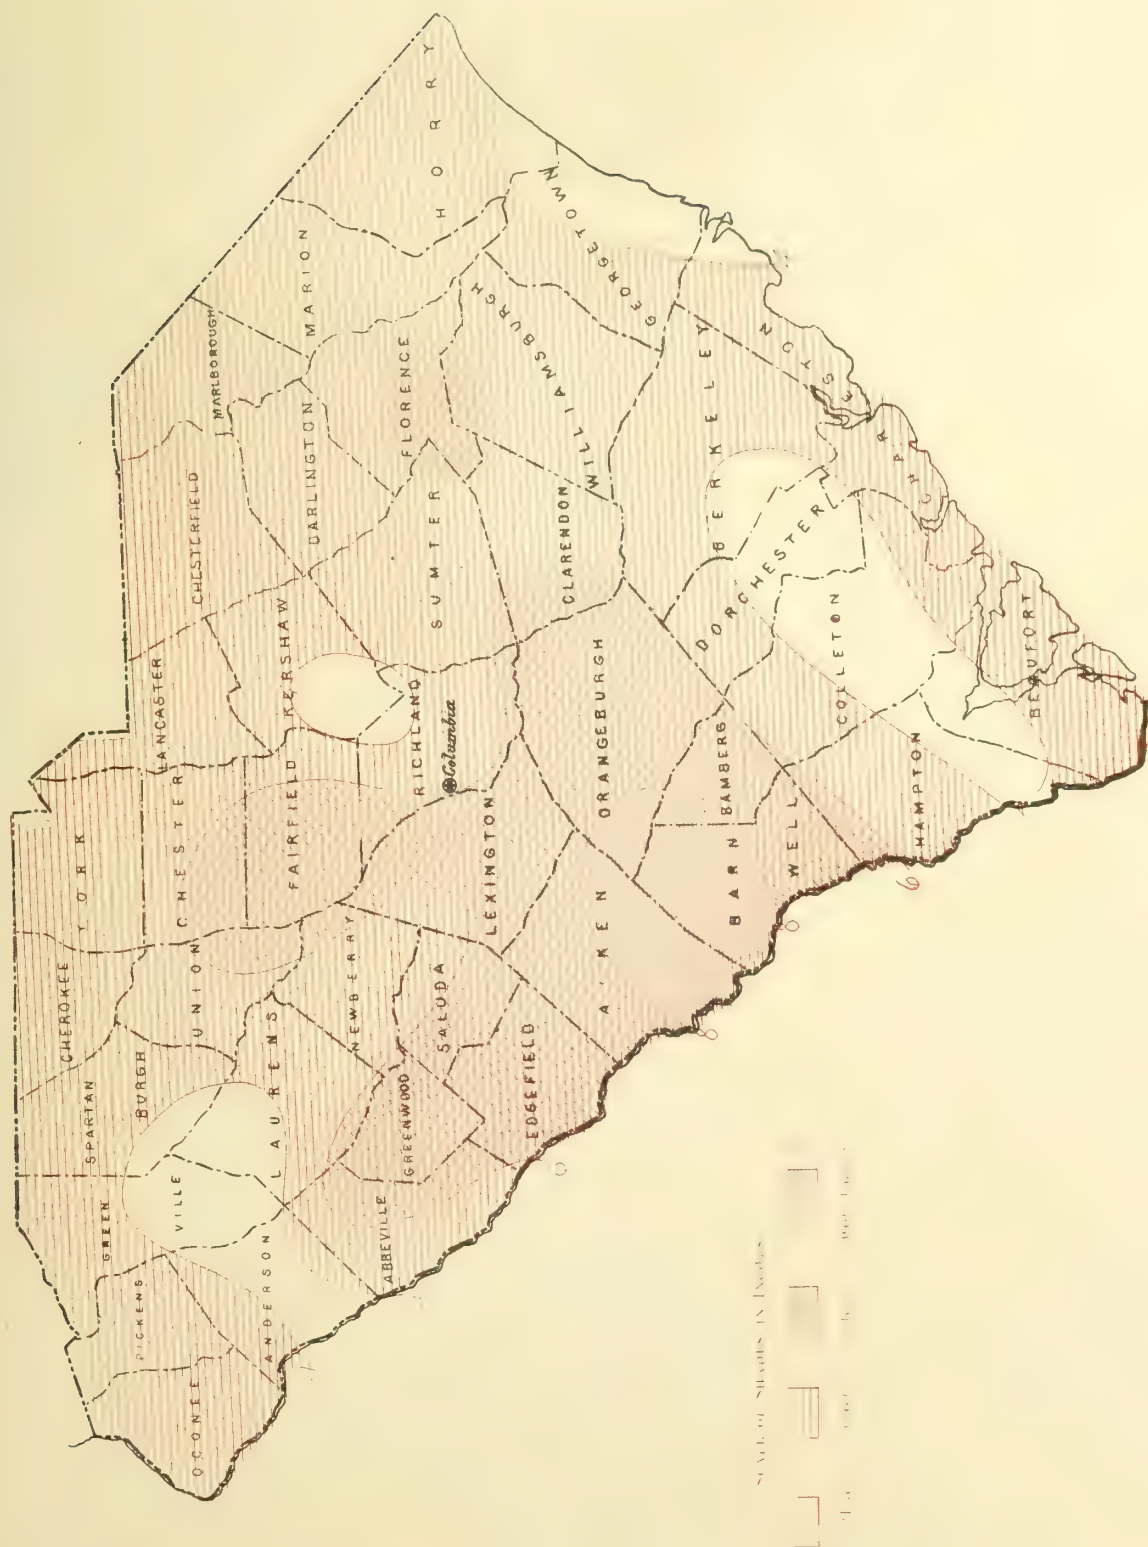

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING FEBRUARY, 1905,

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.

# TOTAL PRECIPITATION FOR FEBRUARY, 1905.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, FEBRUARY, 1905.

COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., MARCH, 1905.

No. 3.

PROGRESS OF FARM WORK.

With the exception of a few days near the middle of the month when it was slightly cooler than usual, the temperature was persistently high during March, 1905, and favorable for both the progress of farm work and rapid germination and growth of early vegetation that was so backward during the preceding month. The month was remarkable for the small number of frosts that occurred, namely, a generally heavy frost on the 3rd and light frosts on the 15th and 25th. The temperature did not fall to or below 32° after the third of the month, and rose to above 80° on a number of days with an extreme maximum of 93°, which is nearly mid-summer heat.

The precipitation was below normal in all parts of the State, and all of it was in the form of rain. There was a general rainy period from the 7th to the 12th, and there were widely scattered, light showers from the 27th to the 31st. In parts of the State the ground became very dry and broke up cloddy under the plow, but generally there was sufficient moisture in the ground for cultivation and for the germination of seeds.

The weather conditions were exceedingly favorable for the rapid progress of farm work of all kinds, so that the preparation of lands for early crops was as far advanced as usual by the close of the month, although having been backward at its beginning.

In the eastern and central parts of the State, the soil was in fine tilth and the preparation for corn and cotton thorough. Corn planting began early in the month in the southern counties and advanced to all parts of the State by the end, with some corn up in the eastern counties. A little cotton was planted, but this work was only begun, and only about half the lands were prepared for it. Some rice was planted in the Colleton district. Tobacco in beds grew rapidly, though the plants were only fair sized, owing to the February cool weather. Gardens were planted generally. Truck grew rapidly and shipments of lettuce and radishes were made during the closing days. Fruit trees of all kinds bloomed profusely after the first week, except in the extreme western counties where blooming began during the last week. Wheat and oats grew rapidly and became promising, except in sections, comprising scattered localities, where oats were badly winter-killed. A large acreage of spring oats was sown, which came up quickly to fine stands. Some spring wheat was sown. The weather was generally favorable during the first half, and entirely so during the second half of the month for the growth of all kinds of vegetation, and for the germination of seeds, as well as for the best development of fall sown grains, and the fruit prospects. There were, in short, no adverse conditions whatever.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for March, 1905, was 57.8° which is 3.5° above normal. The highest local mean was 62.0° at Walterboro, the lowest was 52.8° at Clemson College. The monthly extremes were a maximum of 93° at Walterboro on the 31st, and a minimum of 28° at Gaffney on the 3rd, making the State range 65°. The greatest local monthly range was 59° at Walterboro, the least was 34° at Charleston. The mean of the daily maximum temperatures was 69.2°, and of the daily minimum temperatures was 46.5°, making the average daily range 22.7°.

Frosts.

The month had few frosts. On the 3rd killing frost occurred in the western parts of the State, with freezing temperatures in the extreme northwestern counties, and in other parts of the State the frost ranged from heavy to light. There was light frost in exposed places on the 15th, and a general light frost on the 25th.

Precipitation, in Inches.

The precipitation averaged 2.15 inches which is 1.70 below normal. The greatest local mean was 3.96 at Cheraw, the least was 0.89 at Anderson. The greatest 24-hour fall was 2.24 at Cheraw (2) on the 10th, and at Yemassee on the 11th-12th. The average number of days with 0.01 or more precipitation was 6, ranging from 2 at Edisto to 10 at Walhalla.

Excessive precipitation.—None.

Hail.—Blackville 9th, Walhalla 30th.

Snow.—Trace at Georgetown on the 14th and 16th.

Weather.

The average number of clear days was 15, of partly cloudy ones 6, and of cloudy ones 10.

Wind.

The prevailing direction of the wind was from the north-east at 16 stations, from the southwest at 9, from the west at 8, from the east at 7, from the south at 6, from the north at 3, from the southeast at 2, and from the northwest at 1 station.

High Winds.—Blackville, Columbia 9th, Charleston 5th, Georgetown 12-13th, Summerville 11-12th.

MISCELLANEOUS PHENOMENA (with dates).

Earthquake.—Summerville, 5th, 9:15 a. m. (slight).

Lunar Halos.—Charleston, Stateburg 19th.

Fogs, Dense.—Anderson, Blackville, Columbia, Dillon, Seivern, Society Hill, Summerville 8th; Barksdale 24th, 29th; Beaufort 7th, 8th, 9th; Charleston 7th, 8th, 9th, 24th; Liberty 8th, 9th, 14th; Newberry, Yorkville 29th; Spartanburg 10th.

Thunderstorms.—Barksdale 20th; Beaufort 10th, 24th, 29th; Blackville, Cheraw, Little Mountain, Saluda, Society Hill 9th; Bowman, Trial 24th, Stateburg, Dillon 9th, 24th; Newberry 9th, 20th; Seivern 10th; Walhalla 21st, 30th; Yemassee 9-24th. The above summarized give 22 storms on 7 dates as follows: 9 on the 9th, 2 on the 10th, 2 on the 20th, 1 on the 21st, 6 on the 24th, 1 on the 29th, and 1 on the 30th. Thunderstorms were also reported from Charleston on the 9th and 24th, from Columbia on the 9th.

#### PHENOLOGICAL OBSERVATIONS.

[CONTINUED FROM FEBRUARY NUMBER.]

Wheat was sown from November 1st to December 20th, and harvested from June 5th to June 20th, with yields and quality both "poor".

For garden vegetables the dates differ more widely for some than others, thus irish potatoes were planted from February 15th to March 20th at all places, but the first were dug on May 5th at Charleston, and on June 1st at the other places. The second crop of irish potatoes was planted in August. Sweet potatoes were first planted at Charleston on May 1st, at Lugoff on May 21st, and at Newberry on May 10th. At Charleston the first were dug on August 10th, at Lugoff on October 20th and at Newberry on September 1st. The yields were "large", "fine" and "excellent" respectively.

Melons were planted from April 1st to April 25th at Charleston, from April 11th to 20th at Lugoff, and from April 20th to August 10th at Newberry. They began to ripen at Charleston on June 10th, at Lugoff on July 7th, and at Newberry on July 10th. In the Charleston truck district beans were planted from March 10th to April 15th, and from August 25th to September 15th. The first crop was picked from April 25th to May 20th; the second from October 26th to the first killing frost. Peas were planted from February 15th to March 15th, and picked from April 10th to April 30th. Cucumbers were planted from March 15th to March 30th, and picked from May 1st to June 10th. The other stations did not report on garden truck. Grasses were reported on only from Charleston, and from there only on Hungarian grass and millet, both of which were sown from June 15th to 25th, and cut from August 25th to September 15th.

Rice planting began at Charleston on March 15th and continued to June 15th; at Lugoff (upland rice) planting began on April 1st, ended April 15th. Harvesting began at Charleston on July 15th, ended October 10th; at Lugoff began September 25th, ended October 1st. The crop was "small" in the Charleston district, but quality "good". At Lugoff both quantity and quality were "good". Tobacco was reported on only from Dillon and the dates of planting given April and May, and for harvesting as June to September. The yield was "small" and the quality "average".

#### ERRATA.

The following corrections should be made in the January, 1905, number: Page 5, Batesburg, mean temperature 40.1 should be 40.0; Blackville, mean temperature 42.2 should be 41.8; Cheraw, mean temperature 39.2 should be 39.0; Clemson College, mean temperature 35.8 should be 35.4; Florence, mean temperature 40.4 should be 40.3; Greenville, mean temperature 33.8, should be 33.6; Greenwood, mean temperature 37.5, should be 37.3; Seivern, mean temperature 40.3, should be 40.0; Spartanburg, mean temperature 36.7, should be 36.6.

Page 6, maximum and mean maximum temperatures should be corrected as follows: Batesburg, 15th, 49 should be 44;

26th, 32 should be 26; mean 51.7 should be 51.4; Blackville 15th, 55 should be 45; 26th, 37 should be 26; mean 54.1 should be 53.6; Cheraw, 15th 48 should be 38; 26th, 33 should be 28; mean 50.7 should be 50.2; Clemson College, 14th, 41 should be 48; 25th, 35 should be 25; mean 44.5 should be 35.4; Conway, 15th, 59 should be 43; mean 53.9 should be 53.4; Florence, 15th, 43 should be 42; 26th, 31 should be 27; mean 52.7 should be 52.5; Greenville, 14th, 40 should be 34; 26th, 31 should be 27; mean 45.8 should be 45.5; Greenwood 15th, 44 should be 39; 26th, 32 should be 25; mean 47.1 should be 46.7; Heath Springs, 25th, 32 should be 38; 26th, 29 should be 23; Seivern, 15th, 52 should be 43; 26th, 31 should be 27; mean 53.2 should be 52.7; Spartanburg, 26th, 30 should be 21; mean 47.9 should be 47.6.

Page 8th, Saint Stephens, precipitation on 19th, 0 should be 0.32; pages 5 and 8, Saint Stephens, total precipitation 0.70 should be 1.02.

#### PHENOLOGICAL NOTES.

The following notes on the first appearance of blooms of different varieties of forest and fruit trees would indicate that the season is somewhat later than usual along the coast districts and as early, or slightly earlier, in the interior of the State. The difference between the times of blooming of peach trees in the extreme south and the northwest parts of the State is considerably less than last year.

Beaufort, first peach tree in bloom 10th; jessamine 11th; wild cherry 13th; maples 15th; pears 18th; wood-bine 31st. First chuck-will heard 28th. Dillon, first martin seen 10th; rain frog heard 20th. First peach blooms 9th; apple 27th; Liberty, first peach blooms 11th.

#### REMARKS BY OBSERVERS.

AIKEN.—The month was unusually warm, and very dusty. No frost occurred during the entire month. The rainfall was deficient. Roses were in bloom by the end of the month. ALLENDALE.—The month was exceptionally pleasant. There were no high winds. BARKSDALE.—The month was very favorable for all farm work. Small grains improved. Gardens were planted. Peach, cherry and plum trees are in full bloom. BATESBURG.—Farm work made rapid progress. Nearly all upland corn was planted, but it came up to poor stands. Cut-worms damaged gardens severely. Small grain crop developed nicely. BEAUFORT.—The mean temperature was 1.5° above normal; the precipitation was about normal. The season was backward at the beginning of March, but advanced rapidly during the second half. Farm work is well advanced. Much corn and cotton have been planted. BENNETTSVILLE.—Oats, wheat and rye stood the winter well. Corn has been planted. BOWMAN.—A delightful month for general farm work. Upland corn came up nicely. Some cotton was planted. Small grain crop became promising. All kinds of fruit trees in bloom. Poplars began to bud and show leaves on the 2nd, hickory on the 10th, gum or tupelo on the 15th, developing unusually fast. CLARKS HILL.—No frost during the month. DILLON.—The month was unusually warm. There were but two perfectly clear days, namely, the 25th and 31st. HEATH SPRINGS.—Weather favorable. Farm work well advanced. Corn, cane, white and sweet potatoes were planted. Small grain crops doing well. Stock in good condition. Peach trees were in full bloom. LIBERTY.—Fine growing weather, and small grain crops developed wonderfully, and look promising. Farm work advanced rapidly, and some corn was planted. The preparation of lands for cotton is well advanced. Peach and other fruit trees in bloom.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL, 1905.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE.

## CLIMATE AND CROP SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., APRIL, 1905.

No. 4.

## PROGRESS OF FARM WORK.

The averages of both temperature and precipitation for April are nearly normal, but the month was, in the variability of its weather, quite abnormal. There were two unusually cool periods. The first on the 6th and 7th when snow, rain, sleet and hail as well as killing frost, or light frost, were noted over a large portion of the State. The second from the 16th and 17th, gave usually low temperatures for April, and in many places the lowest on record for the second decade, with the latest killing frost of record. Thin ice was noted to within about twenty miles of the coast, and a heavy ground freeze in the extreme northwestern part.

Over about one-third of the State the precipitation was largely in excess of the normal, but over the other two-thirds was generally below, although there was enough moisture for the needs of germination and growth.

These weather conditions were, in the main, adverse, yet there was not enough interruption to the progress of farm work to make the season of planting materially late, except on lowlands in the sections where precipitation was heaviest.

Corn planting advanced rapidly, and considerable replanting was necessary owing to the ravages of cut worms. Cultivation of corn was begun.

Cotton planting was interrupted by the rains and the cold condition of the soil, yet early plantings came up to fair stands. The frost of the 17th practically killed all cotton that was up, but only a small portion had come up. Later plantings came up to good stands.

The fruit interests suffered severely in the western counties, from the frosts, but were not materially damaging in the central and eastern ones. The commercial peach crop, though less promising than in March, is still good. Truck on the coast farms was not injured, though tender vegetables were largely destroyed in the interior. Tobacco was transplanted and good stands were obtained. Good stands of rice were also the rule. Minor crops grew rapidly after the 20th. The cold periods did no damage to either wheat or oats, and the latter particularly became quite promising.

## CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for April, 1905, was 62.8° which is 0.7° above normal. The highest local mean was 66.4° at Beaufort, the lowest was 57.2° at Greenville. The monthly extremes were a maximum of 92° at Walterboro on the 28th and 29th, and a minimum of 25° at Greenville on the 17th, making the State range 67°. The greatest local monthly range was 61° at Seivern, the least was 46° at Charleston.

The mean of the daily maximum temperatures was 74.5°, and of the daily minimum temperatures was 51.2°, making the average daily range 23.3°.

## Killing Frosts

The last killing frosts of the season, during this month, were reported as follows: On the 16th, Barksdale; 17th, Aiken, Anderson, Batesburg, Bennettsville, Bowman, Cheraw, Clarks Hill, Dillon, Due West, Florence, Gaffney, Greenville, Greenwood, Little Mountain, Pinopolis, Saluda, Spartanburg, Trenton, Trial, Walhalla, Walterboro, Winnsboro, Yorkville; on the 18th, Heath Springs, Newberry, Santuc, Seivern.

The last ice of the season was noted as follows: 16th, Blackville, Georgetown; on the 17th, Bennettsville, Bowman, Clemson College, Columbia, Dillon, Kingstree, Saluda, Spartanburg, Summerville, Trenton, Walhalla.

## Precipitation, in Inches.

The precipitation averaged 3.83 inches which is 0.22 above normal. The greatest local amount was 7.51 at Columbia, the least was 2.00 at Barksdale. The greatest 24-hour fall was 3.59 at Columbia on the 12th-13th. The average number of days with 0.01, or more, precipitation was 9, ranging from 4 at Edisto to 13 at Cheraw.

Excessive precipitation.—Columbia, 12th, 3.47 in 1 hr. 45 mins.; Winnsboro, 15th, 2.54 in 24 hours.

Hail.—Batesburg, 29th; Blackville, 5, 6, 12th; Bowman, Charleston, Little Mountain, Saluda, Spartanburg, 6th; Cheraw, 1st; Darlington, Pinopolis, Society Hill, 5th; Columbia, 21st; Dillon, 5, 6th; Newberry, 6, 9, 29th; Seivern, 30th.

Snow.—Anderson, Newberry, Saluda, Spartanburg, 6th.

Sleet.—Anderson, 17th; Batesburg, 7th.

## Weather.

The average number of clear days was 15, of partly cloudy 8, and of cloudy ones 7.

## Winds.

The prevailing direction of the wind was from the southwest at 20 stations, from the west at 17, from the south at 6, from the north and east at 2 each, and from the northeast and northwest at 1 station each.

High Winds.—Beaufort, 6, 16, 29th; Bowman, 16, 27th; Charleston, 27th; Clarks Hill, 6, 16th; Columbia, 9th; Georgetown, 29th; Heath Springs, 6, 7, 16, 21st; Liberty, 16, 20th; Newberry, 7, 21st; Summerville, 16, 21, 27th; Trial, 6, 16, 17th; Walhalla, 11, 16th; Yorkville, 7, 16th.

## MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Liberty, 17, 25th; Santuc, 25th.

Lunar Halos.—Charleston, 14th; Columbia, 17th; Little Mountain, 11th; Santuc, 12th.

Fogs, Dense.—Barksdale, 4th; Beaufort, Trial, Walterboro, 2nd; Bowman, 25th; Liberty, 15, 22nd; Newberry, Santuc, 15th; Saluda, 10th; Seivern, 4, 25th.

Thunderstorms.—Barksdale, 5, 7, 25, 28th; Beaufort, 5, 10, 11, 12, 15, 21, 22, 26, 29, 30th; Blackville, 5, 6, 12, 22, 26, 29th; Bowman, 5, 6, 27, 29th; Cheraw, 5, 6, 8, 12, 13, 21st; Darlington, 28, 29th; Dillon, 5, 21st; Georgetown, 26, 29th; Liberty, 5, 9, 12, 21, 26, 29th; Little Mountain, Saluda, 5, 6, 9, 11, 12, 21st; Newberry, 4, 5, 6, 9, 11, 12, 21, 26, 29th; Pinopolis, Walterboro, Yemassee, 29th; Santuc, 5, 6, 11, 14, 21, 26, 29th; Seivern, 6, 10, 12, 13, 22, 30th; Society Hill, 5, 9, 26, 28th; Spartanburg, 6th; Summerville, 5, 9, 11, 12, 15, 21, 26, 27, 29th; Trenton, 6, 8, 11, 21, 26, 29th; Trial, 5, 9, 21, 26, 27, 29th; Walhalla, 9, 13th; Winthrop College, 5, 6, 9, 13, 15, 26, 29th; Yorkville, 5, 6, 29th. Summarized, there was a

total of 116 storms reported, distributed throughout the month as follows: 1 on the 4th, 16 on the 5th, 11 on the 6th, 1 on the 7th, 2 on the 8th, 9 on the 9th, 2 on the 10th, 7 on the 11th, 9 on the 12th, 4 on the 13th, 1 on the 14th, 3 on the 15th, 11 on the 21st, 3 on the 22nd, 1 on the 25th, 11 on the 26th, 3 each on the 27th and 28th, 16 on the 29th, and 2 on the 30th.

In addition, Charleston had thunderstorms on the 5, 9, 15, 26, 27, 29th; Columbia on the 5, 6, 9, 12, 21, 26, 29th.

#### ERRATA.

The following corrections should be made in the February, 1905, number: Page 5, Barksdale, total snowfall 4.0 should be 5.2; pages 5 and 8 total precipitation 2.87 should be 3.47. Page 6, Newberry, maximum on 3rd, 32, should be 42, mean maximum 45.8 should be 46.2; Seivern, maximum on 6th, 24, should be 32, minimum on 6th, 32 should be 24, mean maximum 48.4 should be 48.6, mean minimum 27.1 should be 26.5; Summerville, minimum on 5th, 30, should be 26, on the 6th, 36, should be 27, on 9th, 37, should be 33, on 12th, 54, should be 37, mean minimum 35.0 should be 33.8. Page 5, Newberry, mean temperature 37.5 should be 37.7; Seivern, mean temperature 37.6 should be 37.7; Summerville, mean temperature 43.7 should be 43.1. On page 3, under "precipitation in inches", second line change the word "mean" to "amount".

#### THE MECHANISM OF BLOOM.

With infinite patience, but with gratifying success, are scientists wrestling the hidden mysteries of nature in its manifestation of plant life, and the following translation of an article in the *Vossische Zeitung*, for *The Literary Digest* is a reasonable explanation of the phenomenon of blooming: "It is plain that there must be some cause which incites a plant to the formation of blossoms after it has produced for a time only stalk and foliage. \* \* Moebius, for instance, calls attention to the significance of light in the formation of blossoms; but more important are the numerous observations that together indicate that when a plant receives plentiful moisture it produces leaves, and that it bears blossoms when the moisture is meager. To this aspect of the question belong not only climatic and meteorological influences, but especially the phenomena that appear when the plant grows in heavy earth, or its roots have been cut down, or in any other way its steady and large absorption of moisture has been hindered. Regularly in this case its formation of blossoms is favored.

"Latterly a distinguished plant physiologist, Oscar Loew, who lives in Japan, has bestowed most assiduous study on this whole question. In the course of his observations he

has given thorough attention to the extraordinary bloom of the Japanese cherry-tree. Despite the abundance of their blossoms, the Japanese cherry-trees do not produce perfect fruit, as peculiar climatic conditions cause the cherries, still in a quite unripe state, to fall from the trees. Loew has ascertained that the nutritive matter which the tree provides to bring its fruit to ripeness ceases to be operative after the unripe cherries have fallen off, and is stored in the form of starch, in the bark. This starch, in the following spring, is transformed into sugar and appears in an unusually large measure in the sap of the tree. To this fact is due the inference that the sugar is the cause of the irritant influence that leads to the formation of blossoms. Conformably to this inference Loew finds, indeed, that all the peculiar phenomena of the formation of blossoms may be traced to an increased proportion of sugar in the sap and thereby explain themselves precisely. Especially is this the case in the blooming of plants caused, as already stated, by decrease in the absorption of moisture, for, evidently, as soon as the quantity of moisture absorbed begins to decline, the concentration of the cellular sap is quickened and the latter's relative proportion of sugar is enlarged."

#### REMARKS BY OBSERVERS.

**BARKSDALE.**—The whole of the cotton crop was planted and some came up. Corn was nipped by the frost, but recovered. The grain crops developed promisingly. **BATESBURG.**—All vegetation was damaged by the frosts of the 7th and 17th, some being killed. Hail did considerable damage on the 29th. Cotton came up to fair stands. **BEAUFORT.**—Mean temperature  $0.5^{\circ}$  above normal; precipitation 0.40 inches in excess. **BENNETTSVILLE.**—The frost of the 17th hurt the fruit crop to some extent. Corn and cotton did well. **BLACKVILLE.**—Ice formed on the 16th. **BOWMAN.**—The damage from the frost of the 17th was confined principally to garden truck; beans and white potatoes suffered most. Peaches are plentiful on trees; apples were injured somewhat. Small grains developed promisingly. **CLARKS HILL.**—Frost of the 17th killed peaches except on elevated lands, leaving half of the commercial crop; foliage of persimmon and sycamore trees was killed; gardens badly damaged. **DILLON.**—The month was warmer and wetter than usual, with only one perfectly clear day. **GREENVILLE.**—Frost on the 7th injured vegetables and fruit slightly. There was a little snow on the 6th. Frost and ice on the 17th killed fruit. **HEATH SPRINGS.**—Weather was favorable and farm work progressed well. Old corn came up to a stand and some was cultivated. Cotton was planted and some came up. Small grain did well. **LIBERTY.**—Variable weather during the entire month. Planting was well advanced; cotton came up rapidly during the last few days which were favorable. Wheat and oats developed normally. There is some fruit left from the frost of the 17th, though the full extent of the damage is not yet known. **LITTLE MOUNTAIN.**—Crop prospects are fine and crops came up to good stands. Fruit was damaged by the cold. Apple and pear trees badly blighted. **NEWBERRY.**—On the afternoon of the 6th there were rain, sleet, hail and snow. On the 9th there were several hailstorms in the county, damaging fruit. **SANTUC.**—The nights were cool and unfavorable to crop growth. Killing frosts on the 17th and 18th, that killed garden truck and cotton in sections. There are many pests on both trees and vegetables. Crops are poor. **SOCIETY HILL.**—Damage from frosts of the 15th and 17th was not serious. The weather was favorable for the germination of cotton, and for transplanting tobacco. The oat crop became promising.

## CLIMATOLOGICAL DATA FOR THE MONTH OF APRIL, 1905.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.

SPARTANBURG.—At about 5 p. m. of the 6th there were thunder, lightning, sleet, rain, snow and sunshine in the short space of from 5 to 10 minutes. SUMMERVILLE.—Wind storm with rain on the 6th; no damage. Frost occurred twice this month; ice was noted in the vicinity on the 17th. TRENTON.—The frost of the 17th did damage to corn, beans, white potatoes, and cotton that was up. The heavy rain of the 29th damaged lands and crops severely.

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director,

COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., MAY, 1905. No. 5.

PROGRESS OF FARM WORK.

With the exception of night temperatures low enough to materially check the growth of cotton, during a portion of the month, closely followed by a few days of unusually high temperature near the close of the month, the amount and distribution of warmth were favorable for germination, and conducive to growth. Neither the cool nights nor the high temperatures had a material bearing on crop conditions.

There were frequent rains, and excessive precipitation, over all but the central and southwestern counties where the rainfall was either slightly above or slightly below normal, and therefore quite favorable. The northeastern, eastern and southern, and the North Carolina border counties had the heaviest rainfall, in places twice the normal amount. There were very few rains that injured the lands physically over extensive areas, but almost daily showers kept the soil saturated and interfered with the preparation of lands for late corn, and materially hindered the cultivation of field crops, which, in consequence, became foul with grass and weeds to an unusual degree. There was also a lack of sunshine which caused an unhealthy growth of cotton, corn and tobacco, and gave the plants a sickly cast. These were the prevailing conditions, but where the precipitation was about normal, an area equal to about one-third of the State, though not including the regions of heaviest cotton production, cultivation was less interrupted, and both corn and cotton attained normal development and became quite promising.

The weather conditions were adverse over the tobacco raising regions, and that crop suffered from lack of sunshine and cultivation, and an excess of moisture.

Rice did well, also gardens, truck and pastures. The forecast of previous months was verified as to fruit, there being practically none in the extreme northwest, and nearly a full crop of all kinds except apples, in other sections. Early peaches ripened and shipments were begun.

Wheat suffered from rust, and, on being harvested, the yields were almost uniformly poor. The fall sown oat crop ripened and was mostly harvested. The yields varied greatly, although generally below the average of former years. Minor crops, not enumerated, for the most part developed normally.

The prevailing weather conditions can be briefly stated to have been unfavorable, owing to excessive moisture that delayed late planting of corn and a few minor crops, hindered cultivation of corn, cotton and tobacco, and induced an unhealthy growth of corn and cotton, while other crops were not adversely affected and developed normally.

CLIMATOLOGY FOR THE MONTH.

Temperature, in Degrees Fahrenheit.

The mean temperature for May, 1905, was 73.4° which is 1.5°-above normal. The highest monthly mean was 76.6° at Allendale, the lowest was 67.6° at Greenville. The monthly extremes were a maximum of 99° at Seivern on the 30th and a minimum of 42° at Liberty on the 21st, making the State range 57°. The greatest local monthly range was 52° at Liberty and Seivern, the least was 28° at Beaufort and Charleston. The mean of the daily maximum temperatures was 83.2°, and of the daily minimum temperatures was 63.5°, making the average daily range 19.7°.

Precipitation, in Inches.

The precipitation averaged 5.72 inches which is 2.40 above normal. The greatest local monthly amount was 9.50 at Smiths Mills, the least was 2.95 at Batesburg. The greatest 24-hour fall was 3.26 at Cheraw (2) on the 27th. The average number of days with 0.01, or more, precipitation was 13, ranging from 5 at Edisto to 18 at Cheraw, Society Hill and Summerville.

Excessive Precipitation.—Allendale, 16-17th, 2.70 in 24 hrs.; Cheraw (1), 26th-27th, 3.12 in 12 hrs. 30 mins.; Clemson College, 6th, 2.84 in 24 hrs.; Summerville, 4th, 3.10 in 24 hrs.

Hail.—Barksdale, Due West 16th; Beaufort 31st; Bowman 30th; Columbia 10th; Santuc 14th; Stateburg 13th.

Weather.

The average number of clear days was 12, of partly cloudy ones 9, and of cloudy ones 10.

Winds.

The prevailing direction of the wind was from the southwest at 20 stations, from the south at 9, from the west at 8, from the southeast at 4, from the northeast and east at 3 each, and from the north and northwest at 2 each.

High Winds.—Charleston 24th; Cheraw, Newberry 17th; Columbia, Heath Springs 10th; Liberty 17, 18, 19, 30th, Little Mountain 15th; Santuc 3rd; Summerville 24, 25th; Trial 6, 11, 12, 16th; Walhalla 30th; Yemassee 31st.

MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Stateburg 17th.

Lunar Halos.—Bowman 17th; Little Mountain 16th.

Dense Fogs.—Barksdale 17th; Beaufort, Bowman 5th; Blackville, Newberry, Santuc, Seivern, Yorkville 4th; Liberty 14, 27th; Little Mountain 9th; Stateburg 4, 5, 27, 28th.

Thunderstorms.—Allendale 2, 4, 5, 7, 16, 17th; Barksdale 3, 4, 6, 7, 10, 11, 12, 13, 16th; Beaufort 3, 4, 7, 8, 9, 10, 16,

20, 21, 22, 23, 26, 28, 30, 31st; Blackville 3, 4, 7, 8, 10, 16, 22, 23rd; Bowman 3, 4, 7, 10, 16, 21, 22, 23, 30, 31st; Cheraw 4, 7, 10, 13, 14, 28, 30th; Darlington 3, 4, 10, 12, 13, 31st; Due West 16th; Georgetown 2, 3, 4, 5, 10th; Heath Springs 10th; Liberty 3, 4, 5, 6, 8, 10, 15, 16, 22, 30th; Little Mountain 8, 21, 22nd; Lugoff 10, 11, 12, 14th; Newberry 2, 3, 5, 6, 8th; Saluda 22nd; Santuc 3, 5, 7, 10, 12, 14, 15, 16th; Seivern 5, 6, 7, 8, 11, 14, 16, 17, 23, 24th; Society Hill 10, 12, 26, 31st; Stateburg 3, 4, 11, 13, 16, 22, 26, 31st; Summerville 3, 4, 5, 7, 9, 10, 13, 16, 21, 22, 25, 26, 28, 30, 31st; Trenton 3, 6, 10, 15, 22, 23rd; Trial 2, 3, 4, 7, 8, 10, 16, 22, 26, 30, 31st; Walhalla 5, 7, 8th; Walterboro 9, 10, 21, 22nd; Winthrop College 3, 6, 7, 10, 11, 12, 13, 16, 22, 23, 31st; Yemassee 30, 31st; Yorkville 10, 11, 12, 13, 14, 16th.

Summarized, there were 179 storms reported, credited to various dates as follows: 4 on the 2nd, 14 on the 3rd, 12 on the 4th, 8 on the 5th, 6 on the 6th, 12 on the 7th, 8 on the 8th, 3 on the 9th, 18 on the 10th, 6 on the 11th, 7 on the 12th, 7 on the 13th, 5 on the 14th, 3 on the 15th, 14 on the 16th, 2 on the 17th, 1 on the 20th, 5 on the 21st, 12 on the 22nd, 6 on the 23rd, 1 each on the 24th and 25th, 5 on 26th, 3 on 28th, 7 on the 30th, 9 on the 31st.

The following additional thunderstorms occurred: Charleston on the 4, 5, 7, 8, 9, 10, 11, 13, 16, 21, 22, 23, 30, 31st; Columbia 3, 4, 7, 10, 11, 12th.

#### NOTES.

The average daily range of temperature this month was  $19.7^{\circ}$ , which compares with  $26.3^{\circ}$  in 1904. The means of the daily maximum temperatures were about the same for both years, although slightly lower this year than last ( $83.2^{\circ}$  in 1905,  $83.7^{\circ}$  in 1904), while the mean of the daily minimum temperatures was decidedly higher this year, the figures being  $63.5^{\circ}$  in 1905, and  $57.4^{\circ}$  in 1904. Complaints of too cool nights were more frequent last year than this.

This month had the second largest average amount of precipitation of any May since 1888, when records were begun. The following table gives the State averages for the last twelve years. For the first five years after 1894, there were about 45 stations included in the average, and since 1900 about 60 stations.

| YEAR | AMOUNT | YEAR | AMOUNT |
|------|--------|------|--------|
| 1894 | 3.93   | 1900 | 2.37   |
| 1895 | 4.36   | 1901 | 7.31   |
| 1896 | 2.74   | 1902 | 2.69   |
| 1897 | 2.39   | 1903 | 2.69   |
| 1898 | 1.35   | 1904 | 2.04   |
| 1899 | 1.68   | 1905 | 5.70   |

#### ERRATA.

The following corrections should be made in the March, 1905, number of the Monthly Report, South Carolina Section. Page 5. Greenville, mean temperature 53.6, should be 52.6; Saluda, mean temperature 57.8, should be 57.7; Summerville, mean temperature 58.9, should be 58.7. On page 6. Winnsboro, mean minimum 47.6, should be 47.7; Seivern, mean minimum 43.9, should be 43.4; Summerville, maximum on 5th 56, should be 57, on 14th 72, should be 62,

minimum on 19th 61, should be 48, mean minimum 47.9 should be 46.3; Trenton, mean minimum 48.0, should be 48.6; Winthrop College, maximum on 6th 64, should be 67.

April, 1905, Monthly Report. On page 7, the scale of shades "Less than 2", "2 to 4", "More than 4", should read "Less than 4", "4 to 6", "More than 6". Page 5, Gaffney maximum temperature 86 on 2nd, should be 87 on 2nd.

#### REMARKS BY OBSERVERS.

**BARKSDALE.**—Too frequent rains prevented cultivation and some fields of cotton became very grassy. Farm laborers are scarce. The corn crop looks well, having been properly cultivated. Wheat ripened and harvest began; the yields are poor. **BATESBURG.**—Crop prospects are fine. Wheat and oats ripened and were harvested. **BEAUFORT.**—The mean temperature was  $2.0^{\circ}$  above normal, and the precipitation was 1.78 above. Showers were well distributed throughout the month, and were of great benefit to growing crops, but interfered with oats harvest. Corn and cotton developed into fair condition, the latter forming squares. **BOWMAN.**—A very unfavorable month for general farm work. Excessive rains were the cause of grassy crops. All crops are late, especially cotton. Little or no fruit on most trees, while others are bearing well. A bright meteor was noted on the morning of the 9th. **DARLINGTON.**—It was a very disastrous month for all kinds of farm work. There was too much rain and too little sunshine. **DILLON.**—This was the wettest and hottest May of record here. **HEATH SPRINGS.**—Too much rain hindered the proper cultivation of crops, and delayed corn planting. Oats ripened and were cut, with fairly good yields. Peaches began to ripen. **LIBERTY.**—Crops did well where worked, but many fields became very grassy. Wheat was infested with rust; some ripened. Oats are promising. Some lands planted to cotton were abandoned owing to their foul condition. There is a fair peach crop, but apples are scarce. **LUGOFF.**—Wheat and oats crops are fair and harvesting was begun. Fields of corn and cotton became very grassy, and some cotton will be abandoned. Both corn and cotton are small for the season. **NEWBERRY.**—While the rainfall was not excessive, it was continuous, preventing cultivation, and allowing fields to become foul; chopping cotton was not finished. **SANTUC.**—The month was generally cloudy, with much rain and cool nights, and was, withal, unfavorable for all crops, which are at the close, from 10 to 20 days late. **SOCIETY HILL.**—Cotton, tobacco and corn were damaged, more or less, by too frequent rains. Oats became very fine. The fruit prospects are good. **STATEBURG.**—Weather conditions were exceedingly unfavorable on farm work, in regard to preparation of lands, planting, and cultivation of crops. The prevalence of cloudiness and the frequent rains, with subsequent lack of sunshine permitted fields to become foul with grass and weeds. **SUMMERVILLE.**—Numerous thunderstorms this month with considerable rain and cool nights were adverse conditions, preventing cultivation of crops and permitting them to become foul.

CLIMATOLOGICAL DATA FOR THE MONTH OF MAY, 1905.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. § Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.

### STATIONS.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

# TOTAL PRECIPITATION FOR MAY, 1905.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, MAY, 1905.

JULY 27, 1905.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JUNE, 1905.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE.  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.  
  
SOUTH CAROLINA SECTION.  
J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., JUNE, 1905. No. 6.

**PROGRESS OF FARM WORK.**

The month opened with unusual warmth which gave way to about a week of cool weather with low night temperatures that checked the growth of cotton and caused lice to develop rapidly, but did not affect other crops injuriously. The temperature was normal, or above, during the last half with a period of very high day temperatures from the 21st to the 25th, that caused corn and cotton to wilt, especially within the driest areas. Lice gradually disappeared as the heat increased, and other injurious insects, particularly worms on corn, also became less numerous and damaging. On the whole, the temperature conditions were favorable.

The month began with the soil well supplied with moisture, but the scant rainfall and the prevalence of fresh to brisk drying winds during the first half of the month, developed droughty conditions over the larger portion of the State, which were relieved, during the last decade, in the extreme western portions, and in most of the eastern counties, while the central and northern counties received only light scattered showers and the drought increased to the end of the month and began seriously to affect practically all crops adversely. At a number of stations in the central counties, the precipitation was the least of any June of record, covering a period of from 12 to 18 years.

There was so much rain in the previous month that crops could not be properly cultivated, so that, at the beginning of June, nearly all field crops were foul with grass and weeds. The dry weather of this month afforded opportunity to clean and cultivate them, and their condition at the close was as satisfactory as usual in this respect.

Cotton was infested with lice at the beginning of the month, was foul, and the plants were small and in many places had an unhealthy color, while a large portion of the crop had not been chopped to stands. These unpromising conditions gave way rapidly under cultivation and higher temperatures, and the steady improvement was not materially affected by the absence of rain, except that in the driest sections the plants did not grow as rapidly as seemed desirable, and bloomed to the top. Over most of the State, and especially on clayey soils, cotton attained its usual size, and fruited normally.

Early planted corn, especially that portion of the crop that was not thoroughly worked in May, was seriously damaged by the dry weather in all parts of the State. April and May plantings did better and became very promising. The dry weather checked the growth, and the lack of proper cultivation injured the quality of tobacco; selecting and curing was begun. Wheat and oats harvest was finished and thrashing begun. The yields of wheat were very poor, and of oats

were variable but generally fair. Among minor crops, melons developed normally and some shipments were made. Early peaches were excellent while other fruits, except apples, were plentiful in all except the western counties. Early rice became promising and extensive sowing of June rice was made in some districts. The truck season ended. Garden vegetables became scarce.

**CLIMATOLOGY FOR THE MONTH.**

Temperature, in Degrees Fahrenheit.

The mean temperature for June, 1905, was 78.9° which is 0.9° above normal. The highest local mean was 81.0° at Blackville, the lowest was 74.8° at Greenville. The monthly extremes were a maximum of 101° at Yorkville on the 22nd, and a minimum of 43° at Seivern on the 10th, making the State range 58°. The greatest local monthly range was 57° at Seivern, the least was 31° at Charleston. The mean of the daily maximum temperatures was 89.9°, and of the daily minimum temperatures was 67.9°, making the average daily range 22.0°.

Precipitation, in Inches.

The precipitation averaged 1.92 inches, which is 3.28 below normal. The greatest local amount was 6.30 at Walhalla, the least was 0.17 at Little Mountain. The greatest 24-hour fall was 5.25 at Walhalla on the 30th. The average number of days with 0.01, or more, precipitation was 6, ranging from 1 at St. George to 9 at Cheraw and Summerville.

Excessive Precipitation.—Walhalla, 30th, 5.25 in 24 hours. Hail.—Anderson 3rd, Conway, May 31st. (Not previously published.)

Weather.

The average number of clear days was 6, of partly ones 14, and of cloudy ones 10.

Winds.

The prevailing direction of the wind was from the east at 12 stations, from the southwest at 11, from the west at 10, from the northeast at 6, from the south at 5, from the southeast at 4, and from the north at 2.

High Winds.—Charleston, Cheraw 8th; Liberty 8th, 9th, 22nd; Seivern 9th, 10th; Summerville 9th.

**BAROMETER AND WIND TABLE FOR JUNE, 1905.**

**MISCELLANEOUS PHENOMENA (with dates).**

Earthquake.—Summerville, slight on the 3rd at 7 p. m.  
Lunar Halos.—Charleston 14; Little Mountain 13th; Stateburg 13, 14th.  
Fogs, Dense.—Blackville 19, 21st; Bowman 19, 20, 21st;

Darlington, Society Hill 26th; Seivern 2, 13, 15, 20, 21, 22nd; Walterboro 19, 20th.

Thunderstorms.—Barksdale 3, 7, 22nd; Beaufort 8, 12, 13, 16, 17, 22, 24, 25, 27, 28th; Blackville 12, 17, 18, 22, 28th; Bowman 13, 18, 27th; Darlington 25th; Florence 12th; Liberty 3, 6, 14, 15, 16, 17, 18, 19, 20, 21, 24th; Santuc 12, 22nd; Seivern 23, 28th; Stateburg 12, 26, 28th; Summerville 13, 16, 18, 19, 23, 25, 27th, Trenton 3, 12, 14, 17, 22, 27, 28th; Winthrop College 12, 27th; Yorkville 12, 22, 27th.

Summarized, there were 61 thunderstorms reported as having occurred on 21 dates, as follows: 3 on the 3rd, 1 on the 6th, 1 on the 7th, 1 on the 8th, 8 on the 12th, 3 on the 13th, 2 on the 14th, 1 on the 15th, 4 on the 16th, 4 on the 17th, 4 on the 18th, 2 on the 19th, 1 on the 20th, 1 on the 21st, 6 on the 22nd, 2 on the 23rd, 2 on the 24th, 3 on the 25th, 1 on the 26th, 6 on the 27th, and 5 on the 28th.

In addition to the above, Charleston reported thunderstorms on the 1, 12, 25, 27, 28th; Columbia on the 12, 18, 22, 26, 28th.

#### ERRATA.

In the May number, on pages 5 and 8, Walterboro total precipitation 5.91 should be 6.41; page 6, Dillon minimum on 13th 63, should be 66, and mean minimum 64.7, should be 64.8; Heath Springs mean minimum 62.0 should be 63.0; Trial mean maximum 83.9, should be 83.8; Yorkville mean minimum 63.4, should be 63.1.

#### NOTES.

The first cotton bloom of the season was reported from Beaufort on June 1st.

The cooperative observer at Newberry noted that at noon of the 19th, Venus was plainly visible to the naked eye.

#### NOCTURNAL COOLING.

The following is an extract of an article in the Monthly Weather Review for April, 1905, by S. Tetsu Tamura, on the nocturnal cooling of the atmosphere. " \* \* One of the first who observed the cooling of bodies exposed during the night in the open field, under a clear sky and calm atmosphere, was Patrick Wilson, of Glasgow. His observations were made about 1783 by means of two thermometers, one placed on the snow, the other freely suspended at the height of four feet. On one of these nights the lower thermometer, under a perfectly clear sky, marked  $-21.7^{\circ}$  F., while the other marked  $-15.0^{\circ}$  F. The difference of six degrees diminished rapidly when clouds appeared on the horizon and entirely vanished when the sky was completely covered; the two thermometers then had the same reading,  $-13.7^{\circ}$  F. Wilson was also the first to show that the effect of the radiation of bodies toward the sky is sensibly the same at all temperatures; so that in nights equally calm and serene the same substance is always cooled to the same extent, whatever may be the temperature of the atmosphere.

"Some years later Six found that a thermometer on the grass of a meadow during calm and clear nights continued several degrees lower than another perfectly similar thermometer suspended at the height of five or six feet, the difference between the two amounting sometimes to  $7.5^{\circ}$  F.

"At the beginning of the nineteenth century, Wells performed a long series of experiments on the nocturnal cooling of bodies, by placing thermometers in contact with the ground and leaves of plants, or by enveloping them with wool, cotton, and other substances. These thermometers placed at a small distance from the earth's surface, gave a fall of  $4.5^{\circ}$  F. and even  $7.8^{\circ}$  F. below a thermometer without any envelope suspended at the height of four feet.

"The experiments of Wells were repeated by many observers and notably by M. Pouillet. He inserted one of the thermometers into swansdown contained in a vessel placed on the ground and left the other thermometer at the height of four feet. The lower thermometer, on certain nights, fell  $8^{\circ}$  or  $9^{\circ}$  F. below the upper one."

#### REMARKS BY OBSERVERS.

BARKSDALE.—All crops were doing well at close of month, except that worms were damaging early corn. Fields were cleaned of grass and weeds during the month. BATESBURG.—Crops were damaged by drought. Corn turned yellow, peas died and gardens were parched. Insects injured cotton. BEAUFORT.—Mean temperature was  $0.4^{\circ}$  above normal, and precipitation 2.76 inches less than normal. BOWMAN.—June was generally favorable for farm work, and fields were cleaned of grass and weeds that seriously threatened crops, caused by the excessive precipitation of May. The month ended with crop conditions much improved. DARLINGTON.—A very dry month; deficiency was harmful after the heavy rains of May, but the month was favorable for cultivation. Cotton did well, but there was not enough rain for corn. DILLON.—June began with better weather than the previous month, as the rains ceased and crops began to improve, and continued to do so throughout the month. HEATH SPRINGS.—Weather extremely dry throughout the month, there having been less than half an inch of rain. Old corn was seriously damaged; young corn may recover. Cotton remained small, but became well fruited. LIBERTY.—Dry month. There were many cloudy days, with numerous local showers, and in such localities crops are fine; in dry sections crops are small but clean. Cotton blooms abundant. Corn reached the silk and tassel stage of growth. NEWBERRY.—Very dry month. Crops are generally clean. Cotton remained small. Early planted corn very poor. Later plantings did well. SANTUC.—June was a month of many high winds, a small amount of precipitation, many partly cloudy days and few thunderstorms. It was unfavorable on vegetation which made slow progress. SOCIETY HILL.—Cotton and tobacco improved but did not attain an average condition. Corn remained very poor. The precipitation was less than that for any June in the last fourteen years. STATEBURG.—The dry weather was favorable at the beginning of the month in ridding field crops of grass and weeds, but drought became prolonged and became serious and detrimental to crops, especially corn and there will be scarcely half an average yield in this neighborhood. Cotton that was cleaned early and put in condition, did well, but a considerable portion was unavoidably injured in ridding it of grass, and remains stunted and unpromising. SUMMERVILLE.—The drought of the first part of the month was greatly relieved by numerous showers during the last two weeks. TRENTON.—Precipitation 2.81 inches less than the average of June, and 5.98 inches less than the average for the first six months of the year. YORKVILLE.—There were few thunderstorms and very little rain during the month.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JULY, 1905.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE.  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.  
J. W. BAUER, Section Director,  
COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., JULY, 1905. No. 7.

**PROGRESS OF FARM WORK.**

The progress of seasonable farm work, during July was frequently interrupted by rains that made the ground too wet for cultivation, during the first half, but less general and lighter showers during the second half afforded ample opportunity to lay by crops that had attained the proper stage of growth to receive their last cultivation, and, with few exceptions, field crops were laid by free from weeds and grass.

There were two short periods of excessive heat during the month. The first from the 2nd to the 4th, inclusive, and the second from the 17th to the 22nd, inclusive, but as the soil was well supplied with moisture, and the skies generally clouded, the heat was not seriously harmful, and these semi-tropical conditions were conducive to extraordinarily rapid growth of vegetation, especially of cotton and of grasses. The second period had more sunshine, and during it the air was less humid, than the first, and was of longer duration, and dried the surface soil quickly, and it marked the beginning of a period of drought over portions of the State, that continued to the close of the month. These conditions checked the heretofore rapid improvement in the staple crops. Although the adverse weather did not affect the entire State, deterioration set in over a considerable portion of it, so that by the end of the month there was an unusual diversity in in the condition of both corn and cotton, with minor crops less affected. There was, in fact, a marked improvement in tobacco and rice, owing largely to the fact that their culture is localized in sections where the weather conditions were, in the main, favorable.

Late in June, cotton began to grow rapidly and it maintained this rapid growth during the first half of July, when, on sandy lands, growth ceased to a large extent and rust appeared which spread rapidly. Cotton fruited normally during the first half, except on clay soils where the plants grew too much to weed at the expense of fruitage, but during the second half shedding set in on sandy lands, while on clay lands fruitage increased somewhat. By the close of the month there were many full grown bolls, and some open ones, over the southeastern counties. Lice and other insects damaging to cotton, appeared sporadically, but did no serious injury.

Early corn ripened and was not materially affected by the prevailing weather, while late corn improved and became promising. A large crop of watermelons ripened and was marketed. Peach shipments decreased throughout the month, with a particularly fine crop of the Elberta variety, both in size and quality. Tobacco curing made good progress, with late crop better than the early one. June rice came up to good stands, and early rice became a promising crop.

**JULY WEATHER.**

It is both interesting and instructive to institute comparisons between the current season's weather and that of previous years. It is, in fact, only by such methods that an approximate forecast of the yields of growing crops can be made. Such a forecast will not be attempted, but in tabular form will be given a general outline of the weather that prevailed during the past twelve years for the month of July. The first table will give the State mean temperature, the highest, lowest, the average number of days with rain, and the prevailing direction of the winds. The second table will give the State average precipitation, the largest monthly amount and place, and the least monthly amount and place.

**Temperature, Rainy Days and Wind.**

| Year.     | Mean Temp. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for July, 1905, was 80.4° which is 0.5° above normal. The highest local mean was 82.9° at Blackville, the lowest was 75.3° at Greenville. The monthly extremes were a maximum of 101° at Bowman and Winnsboro on the 4th and at Dillon on the 21st, and a minimum of 60° at Darlington on the 21st and at Walhalla on the 26th, making the State range 41°. The greatest local monthly range was 40° at Darlington, the least was 24° at Charleston. The mean of the daily maximum temperatures was 90.4°, and of the daily minimum temperatures was 70.3°, making the average daily range 20.1°.

Excessive Heat.—The temperature rose to 100°, or above, at one or more stations on the 2nd, 3rd, 4th, 17th, 19th, 20th, 21st, and 22nd.

**Precipitation, in Inches.**

The precipitation averaged 6.16 inches which is 0.65 above normal. The greatest local amount was 14.29 inches at Calhoun Falls (a part of this fell on June 30th); the least was 3.15 at St. George. The greatest 24-hour fall was 8.00 inches at Walhalla on June 30-July 1st. The average number of days with 0.01, or more, precipitation was 12, ranging from 6 at Liberty to 18 at Summerville.

Hail.—Columbia 21st; Georgetown 25th.

Excessive Precipitation.—Barksdale, 2nd, 4.28 in 24 hrs.; Beaufort, 11th–12th, 3.88 in 24 hrs.; Blackville, 6th, 2.60 in 2 hrs., 55 mins.; Calhoun Falls, June 30th–July 1st, 7.00 in 24 hrs.; Clemson College, June 30th–July 1st, 3.58 in 24 hrs.; Enoree, 2nd, 2.80 in 24 hrs.; Gaffney, 5th, 2.56 in 12 hrs.; Gaffney, 23rd, 2.70 in 24 hrs.; Georgetown, 25th, 0.60 in 5 mins.; Greenville, June 30th–July 1st, 3.20 in 24 hrs.; Saluda, 29th, 2.90 in 24 hrs.; Seivern, 14th, 3.18 in 24 hrs.; Trenton, 19th, 2.82 in 24 hrs.; Walhalla, June 30th–July 1st, 8.00 in 24 hrs.

#### Weather.

The average number of clear days was 13, of partly cloudy ones 10, and of cloudy ones 8.

#### Winds.

The prevailing direction of the wind was from the southwest at 20 stations, from the south at 12, from the southeast at 7, from the west at 5, from the east at 2, and from the north and northwest at one station each.

High Winds.—Beaufort 11th; Charleston 12th; Columbia 4th, 6th, 21st, 24th; Liberty 4th, 22nd, 30th; Newberry 22nd, 29th; Saluda 4th; Walhalla 9th.

#### MISCELLANEOUS PHENOMENA (with dates).

Earthquake.—Summerville 23rd, two slight ones.

Lunar Halos.—Beaufort 10th; Blackville 16th; Charleston 8, 10, 13th; Little Mountain 12th.

Fogs, Dense.—Blackville 15th; Bowman 28th; Charleston. Clarks Hill 27th; Columbia, Santuc, Trial 6th; Heath Springs 7th; Liberty 22nd; Seivern 15–16th; Society Hill 5, 29th; Stateburg 16, 26th.

Thunderstorms.—Barksdale 2, 5, 7, 10, 11, 12, 13th; Beaufort 1, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 20, 21, 23, 24, 25, 26, 27, 28, 29, 30th; Blackville 4, 5, 6, 7, 9, 10, 11, 12, 13, 19, 23, 25th; Bowman 5, 6, 11, 13, 14, 25, 26, 28th; Cheraw 6, 20, 21st; Darlington 4, 7, 11, 12, 13, 14, 19, 29th; Georgetown 6, 25th; Liberty 1, 4, 5, 6, 7, 8, 9, 10, 17, 21, 27, 28th; Little Mountain 11, 24, 29th; Newberry 1, 4, 6, 10, 11, 13, 28, 29, 30th; Saluda 4, 5th; Santuc 1, 4, 5, 6, 7, 10, 11, 12, 13, 21, 28, 29th; Seivern 5, 6, 7, 8, 11, 13, 14, 20, 22, 25, 29, 30th; Society Hill 4, 13, 14, 19, 21, 28th; Stateburg 4, 5, 13, 14, 19, 20, 24, 26, 27, 28, 29, 30th; Summerville 3, 5, 6, 7, 8, 10, 11, 12, 13, 14, 15, 16, 20, 24, 25, 26, 27, 28, 29, 30, 31st; Trenton 4, 5, 6, 7, 8, 11, 12, 13, 14, 28, 29th; Trial 5, 6, 7th; Walhalla 10, 28th; Winthrop College 6, 7, 10, 11, 12, 13, 14, 22, 28, 29th; Yorkville 6, 10, 12, 22, 29th.

Summarized, there were 184 thunderstorms on 30 dates, distributed throughout the month as follows: 3 on the 1st; 1 each on the 2nd and 3rd; 10 on the 4th; 12 on the 5th; 14 on the 6th; 11 on the 7th; 5 on the 8th; 3 on the 9th; 10 on the 10th; 12 on the 11th; 9 on the 12th; 13 on the 13th; 9 on the 14th; 2 each on the 15th, 16th, and 17th; 4 on the 19th; 5 on the 20th; 5 on the 21st; 3 on the 22nd; 2 on the 23rd; 4 on the 24th; 6 on the 25; 4 each on the 26th and 27th; 11 each on the 28th and 29th; 5 on the 30th; and 1 each on the 31st.

In addition to the above there were thunderstorms noted

at Charleston on the 3, 5, 6, 7, 8, 9, 10, 13, 14, 15, 20, 24, 26, 27, 30th, and at Columbia on the 4, 5, 6, 13, 18, 19, 20, 21, 24, 28, 29th.

#### ERRATA.

In the June Monthly Report the minimum temperature at Allendale on the 10th, should be 10th and 21st; page 7, Barksdale, mean minimum temperature 69.2°, should be 69.3°; pages 5 and 8, Greenwood, total precipitation 3.05, should be 3.07.

#### REMARKS BY OBSERVERS.

**BARKSDALE.**—Excessive rains caused cotton to turn yellow on sandy lands, during the early part of the month, and later it began to shed its fruitage. **BATESBURG.**—Beneficial rains caused all crops to improve, and the prospects for good yields were favorable at the close of the month. **BEAUFORT.**—The mean temperature was 0.9° below normal; and the precipitation 4.82 inches in excess. Cotton was fine at the close of the month on fertile, well cultivated lands, but shedding began on many fields, and some plants were scalded and had rust. Caterpillars appeared during the month. The weather was unfavorable for saving corn fodder, owing to frequent rains. **BOWMAN.**—The weather during the month was comparatively favorable for crops and for general farm work. Fodder pulling was begun under favorable conditions for saving it. A few bolls of cotton opened. **HEATH SPRINGS.**—The weather having been favorable, all crops improved during July. Fodder ripened on old corn. Young corn became promising. **NEWBERRY.**—A storm to the eastward of the station blew down a barn, on the 29th. **SANTUC.**—There was plenty of precipitation, mostly in the form of gentle rains, but in portions of the county the rainfall was heavy and bottom lands were flooded damaging crops on them. All crops grew rapidly, and most of the fields were clean cultivated. **SOCIETY HILL.**—All crops improved owing to the generous precipitation. **STATEBURG.**—Weather conditions on the whole were favorable to crops during the month, for, while there was an unusual number of cloudy days, the precipitation was generally so light as not to cause any material delay in cultivation of crops except on three periods when slightly more than an inch fell each time. The weather conditions were just such as were needed to favor crops after the rough treatment they had been subjected to in clearing them of grass and weeds during the previous month. **TRENTON.**—Precipitation was 0.44 inch less than the normal for July, and the accumulated amount is 6.42 inches less than the normal for the first seven months of the year.

## CLIMATOLOGICAL DATA FOR THE MONTH OF JULY, 1905.

| STATIONS.                             | Counties.    | Elevation—feet. | Length of record—years. | Temperature—in degrees Fahrenheit. |                            |          |       |         |       | Precipitation—in inches. |        |                            |                       |                              | Sky.               |                    |                            |                     |                               | Observers.             |

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard.

\* On other dates also.

a indicates 1 day missing, b, 2 days, etc.

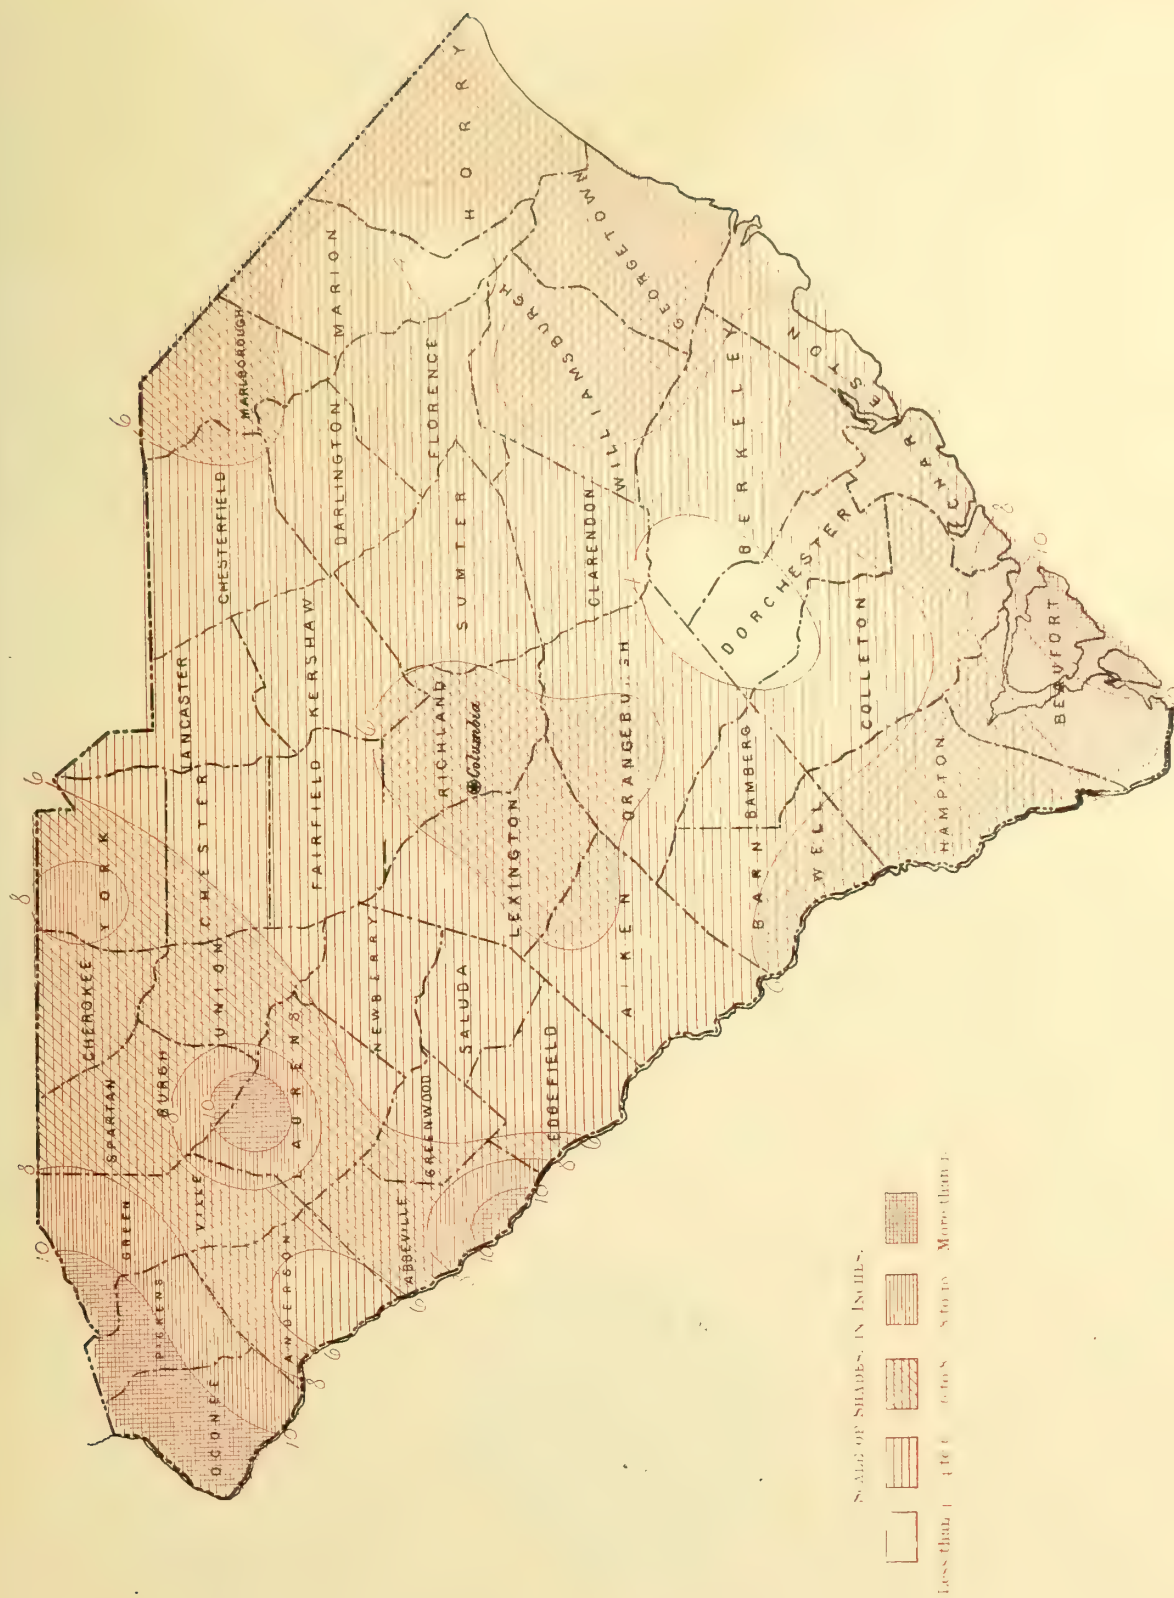

## STATIONS.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. 1, 2, 3, etc., mean respectively 100, 101, 102, 103, etc.

# TOTAL PRECIPITATION FOR JULY, 1905.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, JULY, 1905.

VOL. VIII. COLUMBIA, S. C., AUGUST, 1905.

No. 8.

## PROGRESS OF FARM WORK.

Temperatures were slightly below normal at the beginning of the month, although the departures were scarcely noteworthy, with increasing warmth after the 3rd. Maximum temperatures of 100°, or above, were noted at one or more stations on the 6th, 7th and 8th only. The remainder of the month had about seasonable temperatures, with the exception of a cool period from the 26th to the 29th, inclusive, when, in places, the minimum temperatures were within one degree of the lowest recorded in any August during the last eighteen years.

Neither the few hot days nor the cool period had an injurious effect on crop development, except that the latter period, while it lasted, was somewhat damaging to young cotton, although other growing crops were seemingly benefited.

Droughty conditions prevailed during the first week, after which a period of general and at times copious rains set in on the 7th and continued to the 18th, during which time daily showers occurred over practically the entire State, with numerous thunderstorms. There was a shorter period of rainy weather from the 22nd to the 26th, inclusive. There was no rain at any station on the 1st, 2nd, 3rd, 20th, 30th and 31st; at one station each on the 21st and 29th; at 2 stations on the 28th and at 3 only on the 19th.

While the State average precipitation was nearly normal, it was excessive in localities, causing floods that destroyed lowland crops and damaged lands. No crop suffered material injury from lack of moisture. The rains interfered greatly with gathering fodder from early corn, and considerable was damaged, and the humid atmosphere was not favorable for curing late tobacco.

The usual deterioration of cotton on sandy lands set in early in the month and continued to its close, and in many fields rust caused excessive shedding of squares and young bolls, and, in places, mature bolls rotted but the damage from the latter cause was immaterial and soon ceased. On clay lands, and on well cultivated and well fertilized lands generally, cotton continued to grow, bloom and fruit normally throughout the month. Cotton began to open freely over the southern counties during the first week and opening gradually extended westward reaching the northwestern counties during the last week. Picking began during the first week, and became active over the entire State after the 20th. Sea-island cotton improved generally, although damaged to some extent by caterpillars.

Early corn reached maturity, and was not affected by the prevailing weather; later plantings improved steadily. Tobacco cutting and curing were nearly finished, with the late

crop better than the early one. Some rice was harvested. Minor crops, as a rule, were favored by the prevailing weather, especially peas, sweet potatoes and other fall root crops. Pastures were fine, and gardens fairly good, with about a normal supply of seasonable vegetables.

## AUGUST WEATHER.

In comparison with the twelve year record of August weather, the current month had about the same average cloudiness, except that there were somewhat more wholly clear days and fewer partly cloudy ones. With one exception (1904) the mean temperature was the lowest of record, but the only especially noteworthy feature, in comparison, was the very low minimum temperature on the 26th, which was noted at Aiken, and which was the lowest August temperature of record in South Carolina. There were eight years of the twelve, that had more precipitation, but the rainfall was very evenly distributed during the current month.

The tabular arrangement of data is the same as in the July Monthly Report, and represents the State averages for the different years, and the absolute extremes.

## Temperature, Rainy Days and Wind.

| Year. | Mean Temp. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|-------|------------|---------------|--------------|-------------|-------------------|
| 1894  | 77.9       | 102           | 55           | 11          | SW.               |

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for August, 1905, was 77.9° which is 1.5° below normal. The highest local mean was 82.9° at Aiken, the lowest was 72.3° at Greenville. The monthly extremes were a maximum of 107° at Aiken on the 7th, and a minimum of 46° at Aiken on the 26th, making the State range and the greatest local monthly range 61°; the least local monthly range was 27° at Charleston. The mean of the daily maximum temperatures was 87.8°, and of the daily minimum temperatures was 68.0°, making the average daily range 19.8°.

Excessive Heat.—The temperature rose to 100°, or above, at one or more stations on the 6th, 7th, and 8th.

## Precipitation, in Inches.

The precipitation averaged 5.69 inches which is 0.54 below normal. The greatest local monthly amount was 10.87 at

Santuc, the least was 2.30 at Beaufort. The greatest 24-hour fall was 4.06 at Columbia on the 8th-9th. The average number of days with 0.01, or more, precipitation was 11, ranging from 5 at Effingham to 16 at Cheraw and Santuc.

Hail.—At Society Hill on the 7th.

Excessive Precipitation.—Batesburg, 13th, 2.04 in 2 hours; Beaufort, 25th, 0.87 in 40 minutes; Blackville, 14th, 1.36 in 1 hr. 15 mins.; Columbia, 8th-9th, 4.06 in 11 hrs. 41 mins.; 14th, 1.19 in 45 mins.; Dillon, 23rd, 2.99 in 24 hrs.; Enoree, 4th, 1.80 in 1 hr. 30 mins.; Gaffney, 9th-10th, 3.76 in 24 hrs.; Greenville, 10th-11th, 2.74 in 24 hrs.; Santuc, 7th, 3.41 in about 12 hrs.; Seivern, 25th, 2.52 in 24 hrs.; Society Hill, 8th, 2.86 in 24 hrs.; Winnsboro, 8th, 2.75 in 24 hrs.

#### Weather.

The average number of clear days was 15, of partly cloudy ones 8, and of cloudy ones 8.

#### Wind.

The prevailing direction of the wind was from the south and southwest at 11 stations each, from the northeast at 9, from the southeast and west at 6 each, from the north and northwest at 3 each, and from the east at 2 stations.

High Winds.—Saluda on the 7th.

#### MISCELLANEOUS PHENOMENA (with dates).

Solar Halos.—Charleston 11th.

Lunar Halos.—Charleston 7, 8, 11th.

Fogs, Dense.—Beaufort 30th; Bowman, Stateburg 22nd; Liberty 13th; Santuc 5th; Seivern 21st; Trial 22nd, 23rd; Yorkville 5, 16th.

Thunderstorms.—Beaufort 5, 6, 8, 9, 11, 12, 13, 14, 15, 17, 23, 24, 25th; Blackville 8, 9, 10, 11, 14, 15, 24, 25th; Bowman 9, 10, 11, 12, 13, 14, 15, 17, 22, 23rd; Cheraw 7, 8, 9, 15, 16, 25, 26th; Georgetown 25th; Heath Springs 7, 24th; Liberty 4, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 21, 23, 24, 25th; Little Mountain 7, 8, 12, 13th; Newberry 7, 8, 12, 23, 24th; Saluda 8, 9, 10, 12, 23rd; Santuc 4, 7, 8, 11, 12, 22, 23, 24th; Seivern 12, 13, 15, 24, 25, 26th; Society Hill 7, 12, 13, 16, 22, 24, 25th; Stateburg 7, 8, 9, 10, 11, 13, 14, 15, 16, 17, 23, 24, 25th; Summerville 7, 8, 9, 12, 13, 14, 15, 16, 17, 22, 23, 24, 25th; Trenton 8, 9, 12, 13, 14, 15, 16, 23, 25th; Trial 9, 10, 11, 13, 14, 15, 16, 23, 25th; Yorkville 8, 9, 10, 15, 22, 25, 26th.

Summarized, there were 141 thunderstorms on 20 dates distributed, by dates, as follows: 2 on the 4th, 1 on the 5th, 2 on the 6th, 9 on the 7th, 12 on the 8th, 11 on the 9th, 7 on the 10th, 7 on the 11th, 11 on the 12th, 10 on the 13th, 8 on the 14th, 11 on the 15th, 6 on the 16th, 3 on the 17th, 1 on the 21st, 5 on the 22nd, 10 on the 23rd, 10 on the 24th, 12 on the 25th, and 3 on the 26th.

In addition to the above, thunderstorms were noted at Charleston on the 8, 10, 12, 14, 15, 16, 17, 18, 23, 24, 25, 26th; at Columbia on the 7, 8, 9, 11, 12, 13, 14, 15, 16, 23, 24, 25th.

#### ERRATA.

The following errors occur in the July number of the Monthly Report: Page 6, Seivern mean maximum temper-

ature 92.2°, should be 92.7°; page 5, Seivern mean monthly temperature 80.2°, should be 80.5°; pages 5 and 8, Walterboro total precipitation 5.75, should be 5.85; Winthrop College total precipitation 5.61, should be 5.77.

#### REMARKS BY OBSERVERS.

BARKSDALE.—Fodder from early corn was gathered. Picking cotton began late in the month, and indicated a short crop. Root crops came up to good stands. BATESBURG.—Half the bolls on early planted cotton opened during the month, and much was picked. About half the fodder from early corn was damaged by rain. BEAUFORT.—The mean temperature was 2.1° below normal; and precipitation 4.39 inches below. Cotton opened rapidly and on the least fertile fields most of it opened; the cotton crop is generally light. The closing days were favorable for haying, and planting fall crops. BENNETTSVILLE.—Cotton opened and picking became active. BOWMAN.—The month's weather was unfavorable for crops and general farm work. Cotton opened rapidly in some fields and was picked and marketed. DILLON.—The data for Sundays and Mondays were taken on Monday morning and evening respectively. August was cooler than July. HEATH SPRINGS.—The rainfall amounted to 8.07 inches and nearly all crops were damaged by too much rain. Cotton picking became active during the last week. LIBERTY.—The precipitation was favorable for fall crops. Cotton shed nearly two-thirds its squares at blooming, and no top crop formed, early bolls opened rapidly and picking began. Much corn fodder was damaged by wet weather. NEWBERRY.—During the thunderstorm on the night of the 7th, lightning struck two houses, and damaged electric light wires; one woman was struck and killed. SANTUC.—The month was very wet and stormy, lands and crops were damaged extensively by overflows, but mostly from the continuous rain, which caused cotton to shed excessively. SOCIETY HILL.—There were no fogs this August. STATEBURG.—The weather conditions were generally favorable to crops, there having been no prolonged drought or excessive rains, or prolonged wet periods. Crops that were in fair condition at beginning of the month progressed satisfactorily, and now promise fair yields. Poor crops can be traced to poor soils, insufficient fertilization, and improper cultivation. SUMMERVILLE.—Quite heavy dew on the 3rd, 7th, and 21st. Partial eclipse of the moon on 14th, 9:30 to 11:30 p. m. Partial eclipse of the sun, 30th, 6 a. m. to 7 a. m. TRENTON.—Precipitation 2.89 inches less than normal, and accumulated amount 9.31 inches less than the average for the first eight months of the year.

## CLIMATOLOGICAL DATA FOR THE MONTH OF AUGUST, 1905.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. † Minimum thermometer not standard.  
§ Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc. ° For 24 days.

STATIONS.

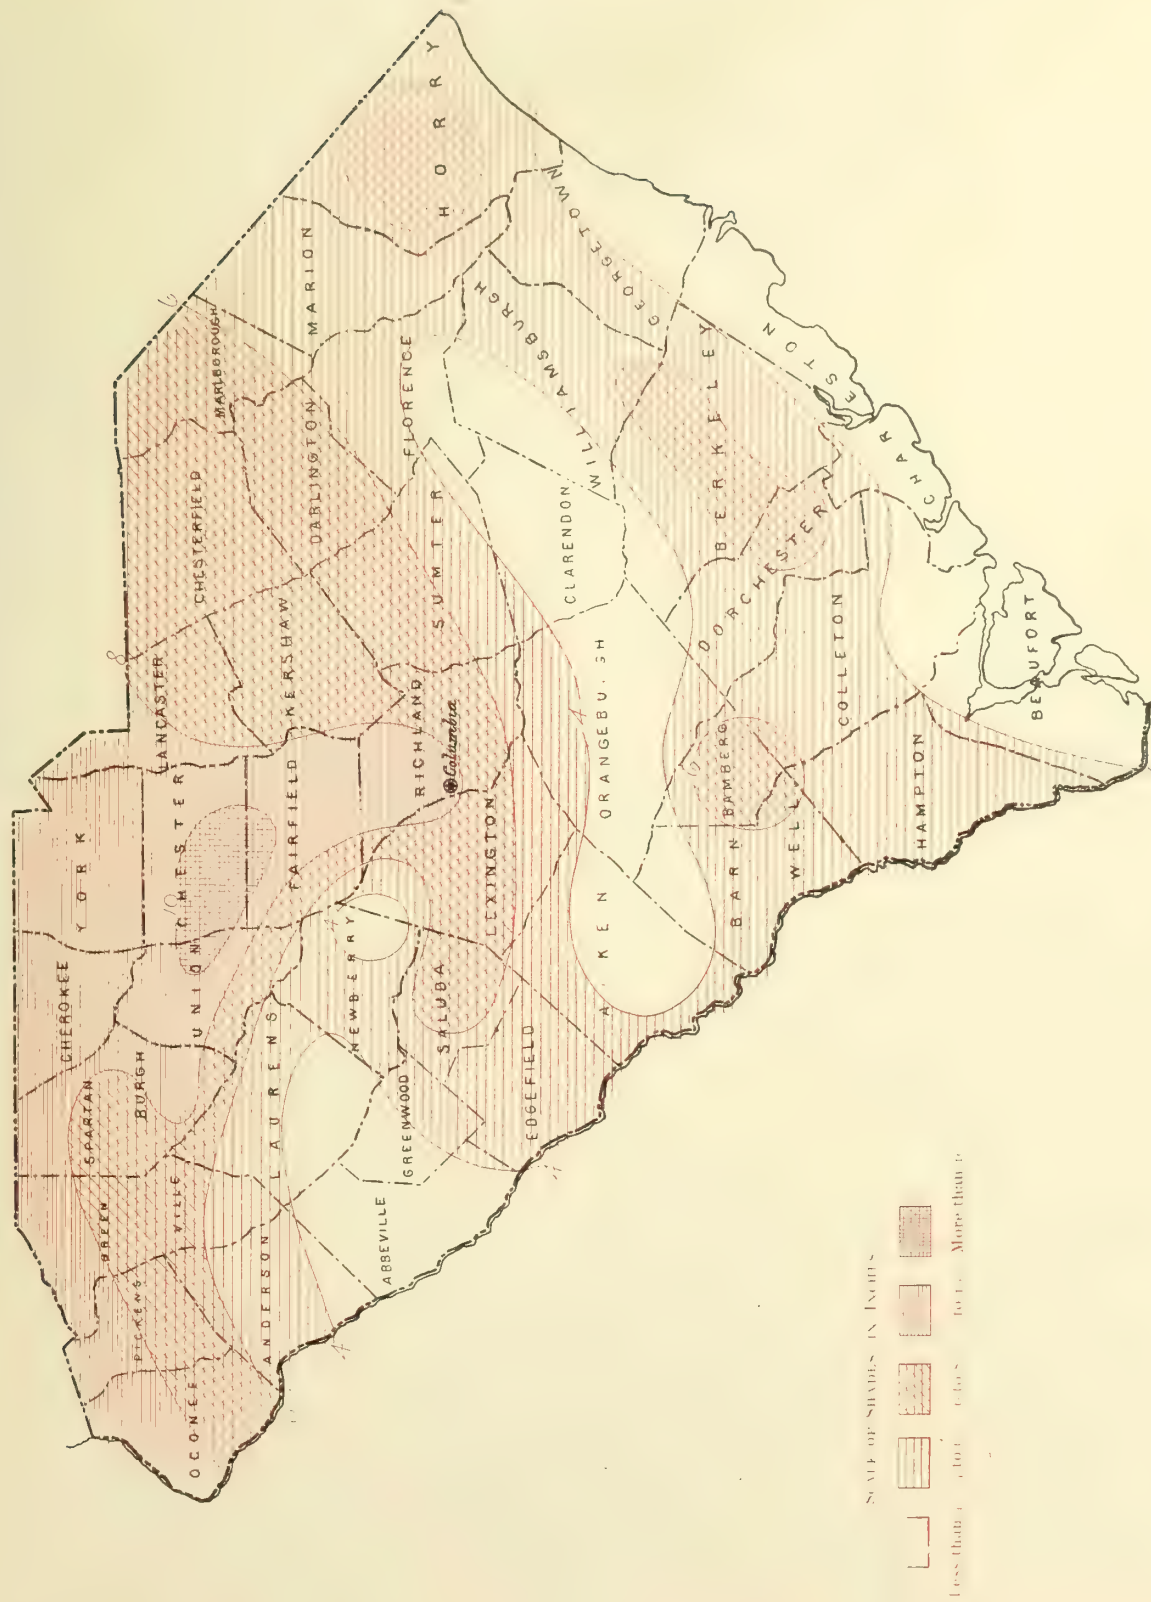

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

\*The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR AUGUST, 1905.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, AUGUST, 1905.

J. W. BAUER, Section Director.

COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., SEPTEMBER, 1905.

No. 9.

## PROGRESS OF FARM WORK.

The September weather was unusually favorable for the rapid advance to maturity of cotton, and for securing the lint in a most excellent condition, owing to the small amount of precipitation over the larger portion of the State. The conditions were least favorable in Darlington and surrounding counties where a short period of heavy precipitation did much damage to open cotton, as well as to lands physically.

The warm, dry weather caused cotton to open rapidly, some to open prematurely, and there were so few rainy days that picking made almost uninterrupted progress, so that by the close of the month it was estimated that over two-thirds of the crop had been picked, making it an unusually early gathered crop.

There was practically no change in the condition of the cotton crop except a slight tendency toward deterioration, for while on the sandy lands the stalks shed their leaves and some young bolls, on clay lands and on well fertilized lands generally, the plants continued to bloom and to fruit throughout the month. However, the fruitage after the middle of September seldom, if ever, arrives at maturity in South Carolina, so that the late fruitage was of no material benefit. Over the greater portion of the State there was very little top crop taken on that will eventually ripen and open. Sea-island cotton opened less rapidly and only about one-third of the crop was picked.

The prevailing weather affected the bulk of the corn crop very little although some late corn ripened during the month, and its maturity was hastened by the clear, dry weather. A large crop of hay was secured in prime condition. Rice harvest was finished and thrashing made favorable progress.

The ground became too hard and dry during the latter half of the month for plowing and for seeding fall oats. It was also too dry in the coast truck regions, especially in the Beaufort district where seeds germinated poorly and where, in consequence, the winter truck season will be a comparative failure. The conditions were better in the Charleston district although not entirely favorable.

All late food and forage crops suffered for rain in the central and western counties, with a result that a small yield of sweet potatoes is expected. In a number of localities wells failed and small streams dried up.

## SEPTEMBER WEATHER.

The current September had nearly normal weather, in comparison with the record for previous years since 1894. The mean temperature was slightly higher due to greater warmth during the daytime, as the mean of the minimum, or night

temperatures, approximates the average of the last 12 years. There has been but one year, 1895, when the average precipitation was less, but this month would have been equally as dry, or dryer, except for the heavy, in places excessive, rainfall over comparatively small areas in the northeastern counties on the 12th. It is not unusual for some portion of the State to have no precipitation during September, there having been three years out of the last 12 with no rain, or else only a trace, at one or more stations. The average number of rainy days is six, or two more than the number this month. The average numbers of clear, partly cloudy and cloudy days are 16, 8 and 6, respectively, which agrees with like data this month.

Two more columns have been added to the tabular data, the one showing the average maximum temperature, the other the average minimum temperature.

## Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|---------|------------|-----------|-----------|---------------|--------------|-------------|-------------------|
| 1894 .. | 75.0       | 83.0      | 67.2      | 100           | 52           | 12          | ne.               |
| 1895 .. | 76.9       | 89.5      | 75.4      | 106           | 35           | 4           | ne.               |

## ERRATA.

In the August Monthly Report, on page 6, the mean maximum temperature of 87.0 at Bennettsville, should be 87.9, and on page 5, the mean temperature of 78.7 at Bennettsville, should be 79.3; on pages 5 and 8, Seivern, total precipitation 6.02, should be 6.72.

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for September, 1905, was 76.2° which is 2.0° above normal. The highest local mean was 80.4° at Aiken, the lowest was 71.2° at Greenville. The monthly extremes of temperature were a maximum of 98° at Aiken on the 1st and 2nd; Batesburg on the 20th; Blackville on the 1st, 19th, 20th; Dillon, Florence, Newberry, Saluda and Seivern on the 1st; and a minimum of 49° at Seivern on the 29th, making the State range 49°. The greatest local monthly range was 49° at Seivern, the least was 25° at Charleston. The mean of the daily maximum temperatures was 86.8°, and of the daily minimum temperatures was 65.6°, making the average daily range 21.2°.

## Precipitation, in Inches.

The precipitation averaged 1.91 inches for the State, which is 1.91 below normal (or half the normal amount). The greatest local monthly amount was 8.60 inches at Darlington, the least was "Trace" at Due West. The greatest 24-hour fall was 8.00 inches at Darlington on the 12th. The average number of days with rain was 4, ranging from "none" at Due West to 9 at Beaufort and Charleston.

Hail.—Cheraw 12th, Seivern 22nd.

Excessive Precipitation.—Darlington, 12th, 8.00 in 24 hours.

## Weather.

The average number of clear days was 16, of partly cloudy ones 8, and of cloudy ones 6.

## Winds.

The prevailing direction of the wind was from the northeast at 16 stations, from the southwest at 10, from the east at 9, from the west at 5, from the north at 4, from the south at 3, and from the southeast and northwest at 2 each.

High Winds.—Charleston 14th, Columbia 4th.

## MISCELLANEOUS PHENOMENA (with dates).

Halos, Solar.—Stateburg 21st.

Dews, Heavy.—Summerville 8, 12, 18, 20th.

Fogs, Dense.—Beaufort 22, 23, 25th; Blackville 14, 19th; Bowman 23, 24, 25, 26th; Charleston 6, 7, 13, 16, 17, 22, 23rd; Columbia. Little Mountain 23rd; Lugoff 24, 28th; Newberry 22, 23rd; Saluda 20, 21, 22, 23rd; Santuc 3rd; Seivern 9, 14, 15, 19, 22, 24, 28th; Stateburg 7, 8, 23, 25th; Summerville 19, 23, 26th; Trial 7, 8, 11, 23, 24, 25, 26th; Walterboro 19, 23, 24, 25, 26, 27th.

Thunderstorms.—Beaufort 1, 2, 3, 4, 5, 13, 21, 24, 25th; Blackville, Darlington, Georgetown, Santuc 12th; Bowman 13th; Cheraw 2, 3, 12, 20th; Liberty 1, 2, 3, 12, 13th; Seivern 5, 13, 22, 25th; Society Hill 2, 3, 12th; Stateburg 3, 12, 20, 21st; Summerville 3, 4, 13, 21, 24th; Trenton 1st; Trial 3, 4, 21st; Yorkville 2nd.

Summarized, there were 46 thunderstorms reported during September, on 12 dates as follows: 3 on the 1st, 5 on the 2nd, 8 on the 3rd, 3 on the 4th, 2 on the 5th, 9 on the 12th, 5 on the 13th, 2 on the 20th, 4 on the 21st, 1 on the 22nd, 2 on the 24th, 2 on the 25th.

In addition to the above, thunderstorms were noted at Charleston on the 3, 4, 5, 12, 13, 14, 21, 24th; and at Columbia on the 4, 12, 13, 20th.

## THE SUN'S ATTRACTION.

It is generally known by scientists that the sun has a powerful repulsive force, and it would appear from an article of considerable length in *Cosmos* that it has also a no less powerful attractive force. Says the writer, "Flammarion, the French astronomer, recently noted some interesting facts, illustrating that the sun may have an attractive force, but this, however, is of interest to botanists rather than to astronomers or meteorologists. Flammarion made many experiments on this point. Thus, in the gardens of the Juvisy observatory, a tree was once raised to an upright position by the action of the sun alone. It was a chestnut that the wind had overturned against a wall. The sun righted the tree little by little". The writer discussed the subject at length but in the main he fails to agree with Flammarion that the attractive force of the sun was the controlling force that righted the tree.

## REMARKS BY OBSERVERS.

ANDERSON.—Sixty-five per cent of the cotton crop was gathered by October 1st. BATESBURG.—About three-fourths of the cotton crop opened and was picked during the month; much hay was gathered and the weather was very favorable for this work. BEAUFORT.—The mean temperature was 1.4° above normal; the precipitation was 2.74 inches less than normal; the weather was generally favorable for curing hay and picking cotton, but was much too dry for germination of fall sown crops which, in consequence, are a complete failure. BOWMAN.—The month was remarkably dry and hot; cotton opened rapidly and was picked as quickly as possible, and a large portion was marketed as long as the price was above ten cents a pound. CLARKS HILL.—Unusually dry and hot throughout the month. CLEMSON COLLEGE.—Three-fourths of the cotton crop was picked this month. HEATH SPRINGS.—Weather favorable for maturing late crops, and for harvesting all crops; fodder and hay nearly all harvested and some corn gathered; about three-fourths of the cotton crop was picked. LIBERTY.—A very dry month, and the bulk of the cotton crop opened and was gathered; much fodder and hay saved in good condition; no plowing was done as the ground was too dry; fall crops suffered for rain. LITTLE MOUNTAIN.—The month was too dry for any plowing; no oats were sown; streams and wells failed. LUGOFF.—About three-fourths of the cotton crop was gathered; rain was badly needed; haying made rapid progress; the sweet potato crop is probably short. NEWBERRY.—This was the driest September since 1895; cotton opened very fast and picking was pushed; peas and late corn suffered for rain; much hay was gathered in fine condition. SANTUC.—The month was dry and for the most part hot; the winds were mostly from the north, northeast and northwest and were very drying and consequently detrimental to plant growth, and fall crops suffered severely. SOCIETY HILL.—The yield of cotton is probably one-third less than last year; corn and tobacco were also short crops. STATEBURG.—The weather during the month was remarkably fine and well suited for maturing and picking cotton, as well as for haying and for harvesting other ripening crops; rain fell on six days and was heavy near the middle of the month, and very beneficial; by the end of the month about half of the cotton crop was picked and the remainder continues to open rapidly, indicating an unusually early completion of this work. TRENTON.—Precipitation 3.35 inches less than normal for September, and 12.66 less than the average for the first nine months of the year.

CLIMATOLOGICAL DATA FOR THE MONTH OF SEPTEMBER, 1905.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
§ Exposed not standard. \* On other dates also a indicates 1 day missing, b, 2 days, etc.

### STATIONS.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

# TOTAL PRECIPITATION FOR SEPTEMBER, 1905.

COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., OCTOBER, 1905. No. 10.

## PROGRESS OF FARM WORK.

Seasonable farm work advanced rapidly during October, owing to the generally favorable weather that prevailed during the greater portion of the month.

The temperature averaged slightly higher than usual, with two cool periods during which light to killing frosts occurred over nearly the whole State, except on the immediate coast. The first light frosts occurred generally on the 12th and 13th, but even the most tender vegetation was scarcely injured by them; the second period, on the 22nd and 23rd, was somewhat cooler, over the western counties the frosts were killing along streams and in low places, or other susceptible localities, but generally only the most tender vegetation was damaged.

There were light rains on the 2nd and 3rd that scarcely interfered with farm work, while heavier and more general rains on the 10th and 11th interrupted harvesting operations for two days: there was a cloudy and rainy period from the 25th to the 29th over the entire State. The State average precipitation was only 63 per cent of the normal October amount, and was scarcely enough to render plowing and seeding practicable on heavy soils.

That portion of the cotton crop that did not open, and was not picked during September, opened favorably and practically all of the upland crop was gathered during the month, except very late cotton. The small top crop, which formed barely one-tenth of the whole, developed favorably up to the 22nd and 23rd when the frosts checked further growth or development. On light soils, and over the eastern and central parts of the State generally, picking was finished by the close of the month. The sea-island cotton was later in opening and less than three-fourths was picked. The weather was generally favorable for securing the lint in prime condition, free from weather stain or other deteriorating influences.

The weather was also favorable for harvesting corn, nearly all of which was gathered in good condition, with the grain well filled and thoroughly dry. In a few localities pea-vine hay was damaged, but most of a large crop of this forage was saved and stacked thoroughly cured.

There was insufficient moisture for the best development of sweet potatoes and turnips, and, from the same cause, sorghum and sugar-cane gave small yields of syrup.

The month was unfavorable, owing to the small rainfall until near its close, for fall truck and gardens, which, in the Beaufort district, are almost failures, but which are somewhat better in the Charleston district owing to more favorable weather in September.

Plowing for fall oats was generally delayed until after the middle of the month when it became active and a considerable acreage was sown which germinated favorably during the rainy period near the close of the month.

On the whole, the October weather conditions were about normal, and quite favorable for the progress of farm work. The yields of the staple crops approximated the average of former years.

## OCTOBER WEATHER.

The variation in the mean temperature for the last 12 years was between 61.3° and 67.6°, or a range of 5.3°. The maximum temperatures are steadier during this month than the minimum, the mean of the former having had a range of only 3.8°, while the latter had a range of 9.8°. The warmest October was in 1900 when both the day and the night temperatures were the highest of record. The coolest October occurred in 1895, due to about average day temperatures and to abnormally cool nights. The absolute lowest temperature since 1894, was 25° in 1903, although minimum temperatures below freezing, in some portion of the State, occurred in every year except 1894, 1897, 1899, and 1900.

The State average precipitation is about 3.00 inches for October, and the range has been between 0.89, in 1901, and 5.00, in 1899. The region of heaviest precipitation is usually along the coast, although not invariably so. In 1901 there was no measureable amount at Georgetown, and in 1904 there was none at Walhalla. There is usually enough rainfall to put the ground into condition for tillage, and for the quick germination of fall sown oats and rye, but streams are usually at their lowest stage during this month. The average number of clear days ranges between 13 and 23, of partly cloudy ones between 5 and 8, and of cloudy ones between 3 and 11. Clear skies are the prevailing condition, while cloudy and rainy periods are few and of short duration. The prevailing winds are from the northeast, except in 1903 when they were from the north. The usual tabular data is given herewith.

## Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|---------|------------|-----------|-----------|---------------|--------------|-------------|-------------------|
| 1894 .. | 64.2       | 74.5      | 54.6      | 98            | 33           | 5           | ne.               |

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for October, 1905, was 64.2° which is 0.7° above normal. The highest local mean was 69.2° at Beaufort, the lowest was 58.8° at Greenville. The monthly extremes were a maximum of 93° at Blackville on the 2nd, and a minimum of 29° at Seivern on the 22nd, making the State range 64°. The greatest local monthly range was 62° at Saluda and Seivern, the least was 35° at Charleston. The mean of the daily maximum temperatures was 75.8°, and of the daily minimum temperatures was 52.5°, making the average daily range 23.3°.

## Frosts.

Frosts, first light.—Aiken, Beaufort, Florence, Santuc 13th; Anderson, Barksdale, Batesburg, Bennettsville, Blackville, Bowman, Cheraw, Columbia, Gaffney, Greenville, Little Mountain, Lugoff, Newberry, Seivern, Society Hill, Spartanburg, Summerville, Winthrop College, Yorkville 12th; Liberty, Saluda 11th; Heath Springs, Kingstree, Waltherboro 22nd; Walhalla 23rd.

Frosts, first killing.—Batesburg, Cheraw, Little Mountain, Newberry, Saluda, Seivern 22nd; Due West, Gaffney, Heath Springs, Lugoff 23rd.

## Ice.

Thin Ice.—Blackville 23rd; Society Hill 22nd, 23rd.

## Precipitation, in Inches.

The precipitation averaged 1.97 inches which is 1.16 below normal. The greatest local monthly amount was 5.20 at Liberty, the least was 0.60 at Saint George. The greatest 24-hour fall was 2.50 inches at Liberty on the 3rd. The average number of days with 0.01, or more, precipitation was 6, ranging from 2 at Allendale, Edisto and Kingstree to 9 at Beaufort and Society Hill.

## Weather.

The average number of clear days was 15, of partly cloudy ones 6, and of cloudy ones 10.

## Winds.

The prevailing direction of the wind was from the northeast at 23 stations, from the north at 10, from the east at 6, from the west at 4, from the southeast and northwest at 3 each, from the southwest at 2, and from the south at 1 station. High Winds.—Bowman, Liberty 11th; Charleston 7th.

## MISCELLANEOUS PHENOMENA (with dates).

Abnormally High Tides.—Beaufort 28, 29, 30, 31st.

Solar Halos.—Charleston 9, 25th.

Lunar Halos.—Beaufort, Charleston 6, 9th; Blackville 7th; Little Mountain, Saluda 9th.

Thunderstorms.—Beaufort 3rd; Bowman 1st; Georgetown 11th; Summerville 3, 4, 26th. Summarized, there were 6 thunderstorms on 5 dates as follows: 1 on the 1st, 2 on the 3rd, and 1 each on the 4th, 11th, and 26th.

Fogs, Dense.—Barksdale 17th; Beaufort 17, 18th; Bennettsville 15, 16, 17, 18, 19th; Blackville, Trial 17, 18, 19th; Bowman 16, 17, 18, 19, 20th; Charleston 16, 17th; Clarks Hill, Newberry, Saluda 18th; Columbia, Little Mountain 18, 19th; Dillon, Lugoff 16, 17, 18th; Georgetown 19th; Santuc 4, 17, 18, 19th; Seivern 2, 3, 5, 18, 19, 26th; Society Hill 16, 17, 18, 19th; Waltherboro 3, 16, 17, 18, 19th; Yorkville 17, 18, 26th.

## PENALTY FOR COUNTERFEITING FORECASTS.

Any person who shall knowingly issue or publish an counterfeit weather forecasts or warnings of weather conditions, falsely representing such forecasts or warnings to have been issued or published by the Weather Bureau, or other branch of the government service, or shall molest or interfere with any weather or storm flag or weather map or bulletin displayed or issued by the United States Weather Bureau, shall be deemed guilty of a misdemeanor, and, on conviction thereof, for each offense, be fined in a sum not exceeding five hundred dollars, or be imprisoned not to exceed ninety days, or be both fined and imprisoned, in the discretion of the court. (See Act of Congress approved March 3, 1905.)

## REMARKS BY OBSERVERS.

BARKSDALE.—The month closed with fine weather. Cotton picking was practically finished during the month; some oats and wheat were sown. BATESBURG.—All cotton opened and most of it was picked during the month. The light frost on the 12th did very little damage, and the heavy frost on the 23rd killed vegetation on lowlands only. BEAUFORT.—Mean temperature for October was 1.5° above normal; the precipitation was 1.52 below normal. The deficiency since August 1st is 8.65 inches. Cotton and hay harvest nearly finished. A fair crop of corn was gathered. Sweet potatoes and sugar cane gave small yields. Turnips and fall gardens are complete failures except in a few localities. BENNETTSVILLE.—Cotton gathering was about finished during the month; and practically all corn, peas and potatoes were gathered. GREENVILLE.—The first light frost occurred on the 12th, with several frosts on later dates but none severe enough to injure the most tender vegetation. HEATH SPRINGS.—Nearly all crops were harvested in good condition, and the yields were about normal. Some oats were sown. LIBERTY.—The weather was favorable for saving cotton, but much pea-vine hay was damaged. Cotton was practically all picked. Wheat sowing was in progress at close of month. Killing frost was not general. LITTLE MOUNTAIN.—The ground was too dry for doing any plowing, and no oats were sown, except on low, sandy lands. NEWBERRY.—The frosts on the 22nd and 23rd were severe enough to kill sweet potato vines and cotton on low places, but they were not general killing frosts. SALUDA.—The first robins arrived on the 22nd, and many others on the 28th. SANTUC.—The month was generally dry and cool, with occasionally very light rains. Vegetation ripened rapidly, and forest trees shedded their leaves freely. Killing frosts occurred along streams on the 22nd and 23rd, but the frosts were light on high lands. SOCIETY HILL.—Sweet potatoes were nipped on the 22nd and 23rd, while other vegetation was unhurt. Oats and rye planting in progress. SUMMERVILLE.—Frosts were reported in the vicinity on the 12th and 22nd but minimum thermometer only 43° and 44°, respectively, on those dates. There were frosts on the 13th and 23rd. Fog on the 19th. On the 11th there was a slight earthquake tremor at 1:45 p. m., and another on the 16th at 2:10 p. m. TRENTON.—Precipitation 2.03 inches less than normal, and 14.69 less than the average for the first ten months of the year. Ninety-five per cent of the cotton crop was gathered. Some oats were sown, but rain is needed to finish seeding. YORKVILLE.—Some light frosts, but no killing ones in this vicinity.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also † indicates 1 day missing, b, 2 days, etc.

‡ Apparently too high, probably due to defective minimum thermometer.

## STATIONS.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR OCTOBER, 1905.

[illegible]

T. indicates trace, less than .01 inch.

Vol. VIII. COLUMBIA, S. C., NOVEMBER, 1905. No. 11.

**PROGRESS OF FARM WORK.**

November is devoted mainly, by the farmers, to finishing harvesting operations and to seeding winter grains, for both of which the weather was favorable during the current month, except that in places it was too dry for the thorough preparation of lands.

The month averaged warmer than usual, due principally to the closing week, which had unusually high temperatures. There was no severe cold weather, but light frosts were of frequent occurrence, and the first killing frost of the season occurred on the 2nd, 11th, 12th, 15th, 17th, 21st and 22nd, respectively, at different stations of this service. On the 12th, 15th and 22nd, thin ice formed to within a few miles of the coast. These frosts and ice did practically no damage, as all crops were ripe and most of them harvested, in the interior, while in the coast truck regions the frosts were not heavy enough to materially injure growing vegetables.

The average precipitation was, with the exception of 1901, the smallest November amount of record. There were no heavy rains in any portion of the State. The rainfall was quite evenly distributed, and it was heaviest in the upper Savannah valley where a narrow strip had slightly in excess of two inches, while the rest of the State had from half an inch to nearly two inches, except upper Dorchester county where no rain fell this month.

The absence of heavy rains was a favorable condition for finishing harvesting operations, and particularly for practically finishing picking cotton, although the amount picked was small owing to the exceptionally favorable weather during the previous three months for this work. In scattered localities laborers are scarce and there a small portion of the crop remains unpicked.

The housing of sweet potatoes, the cribbing of corn, and the gathering of other minor crops were finished.

The drought interfered to a considerable extent with fall seeding, as clay lands were too hard to plow and prepare, except in Pickens county where the ground was too wet during the last half of the month. While the greater portion of a large proposed acreage of wheat and oats was planted, sowings will not be completed until about the middle of December. Early sown grains germinated favorably and came up to good stands. In the coast and other truck raising regions the lack of sufficient moisture retarded growth of some vegetables, although on the whole winter truck is in fair condition.

The drought caused many wells to fail, and small branches to dry up, while larger streams were at practically low water stages the entire month.

**NOVEMBER WEATHER.**

Unlike in October, the mean temperature in November depends not on either the day or night temperatures alone, as the average of both show about the same range in the last twelve years. The mean of the day, or maximum, temperatures was 70° in 1896, the highest, and was 60.2° in 1901, the lowest on record. The mean of the night temperatures was 48.8 in 1902, the highest, and was 36.2° in 1901, the lowest, on record. The coldest November was that of 1901, followed by the warmest in 1902. On three years the maximum rose to 90°, or above, in some part of the State, and the minimum was below 32 in every year. The lowest minimum recorded was 10° at Clemson College in 1903. Frosts are of frequent occurrence this month, and the average date of first killing frost is November 10th. Along the immediate coast killing frosts do not usually occur, but light frosts are not rare.

The average precipitation is less in November than for any other month, and it is the only month whose average is under three inches. The rainfall is usually well distributed geographically, although stations either near the coast or in the mountain districts record the largest amounts. Excessive precipitation rarely occurs, although in 1896 4.36 inches fell at Cheraw in 24 hours, this being the largest 24-hour fall of record. The average number of days with rain is six, and in 1905 it was only three, this being the least on record.

Snow has occurred on six of the twelve years under review, but the State average depth was a measureable quantity in 1901 only, being generally merely a trace. The occurrence of snow in November is rare in the eastern half of the State.

The prevailing direction of the wind shows greater variability than the preceding three months, but the prevailing wind is still from the northeast. Clear skies predominate, the average number of clear days being 14, partly cloudy 8, and cloudy ones 8. The conditions as to the relative humidity and other climatic elements are usually such as to make November the most exhilarant month of the year.

**Temperature, Rainy Days and Wind.**

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |

## CLIMATOLOGY FOR THE MONTH.

## Temperature, in Degrees Fahrenheit.

The mean temperature for November, 1905, was 54.5° which is 1.4° above normal. The highest local mean was 60.0° at Beaufort; the lowest was 48.5° at Greenville. The monthly extremes were a maximum of 90° at Gaffney on the 26th; a minimum of 21° at Greenville on the 23rd, 24th, and at Seivern on the 22nd, making the State range 69°. The greatest local monthly range was 66° at Gaffney, the least was 42° at Charleston. The mean of the daily maximum temperatures was 66.7°, and of the daily minimum temperatures was 42.3°, making the average daily range 24.4°.

## Ice.

Thin ice was noted and recorded as follows: Columbia, Stateburg 15th, 22nd; Greenville 22nd; Newberry, Santuc 11th; Summerville 12th, 22nd.

## Frosts.

First killing.—Liberty 2nd; Barksdale, Santuc 11th; Anderson, Bowman, Conway, Dillon, Trial 12th; Aiken, Bennettsville, Florence, Greenwood, Society Hill, Stateburg, Sumter, Winthrop College, Yorkville 15th; Clemson College, St. Matthews 17th; Georgetown, Winnsboro 21st; Blackville, Clarks Hill, Columbia, Greenville, St. George, Spartanburg, Summerville, Trenton, Walterboro, Yemassee 22nd.

## Precipitation, in Inches.

The precipitation averaged 1.31 inches which is 1.53 below normal. The greatest local monthly amount was 2.41 at Liberty; the least was 0.00 at St. George. The greatest 24-hour fall was 1.90 at Liberty on the 20th. The average number of days with 0.01, or more, precipitation was 3, ranging from none at St. George to 7 at Newberry and Pelzer.

## Winds.

The prevailing direction of the wind was from the southwest at 15 stations, from the northeast at 13, from the north at 9, from the west at 5, from the northwest at 4, and from the southeast and south at 1 station each.

High Winds.—Blackville, Little Mountain 16th; Charleston, Yorkville 14th; Clarks Hill, Newberry 30th; Columbia 14th, 29th; Liberty 14th, 15th, 16th; Seivern 8th, 17th; Society Hill 14th, 30th; Summerville 14th, 16th.

## Weather.

The average number of clear days was 17, of partly cloudy ones 6, and of cloudy ones 7.

## PRESERVE THE FORESTS.

While it is doubtful that forests cause increased precipitation, there is no question but that they conserve the rainfall, in its off-flow, and in upper South Carolina the latter fact is of more importance than an increased amount of precipitation would be. This was forcibly illustrated during the current month by the low stage of water in the Broad River, that at one time threatened a water famine in Columbia which city takes its water supply from this river.

The economic value of a steady flow of considerably more than an extreme low water stage was shown by a cotton mill being forced to shut down for a time owing to an insufficient supply of water for the power plant which generates the electricity used in operating the machinery of the mill, and also by the necessity of the partial suspension of the trips, and light loading of the boat that plies between Columbia and Georgetown.

As manufactories that depend on water power increase, and when the boat line becomes a more important factor in the transportation facilities of Columbia, the question of securing a steady and sufficient flow in the streams of the upper part of the State will become a serious one.

## REMARKS BY OBSERVERS.

BARKSDALE.—The month was favorable for sowing grain, but closed cold. BATESBURG.—Cotton all picked and practically all corn and peas were gathered, and some grain was sown, by the close of the month. There was a light ground freeze on the 22nd. BEAUFORT.—Mean temperature 0.7 above normal, while the precipitation was 0.91 inch less than normal. HEATH SPRINGS.—Weather very dry, with about normal temperature. All crops harvested. Oats came up well. LIBERTY.—While the rains were generally light during the last half of the month the ground was too wet to plow, and there remains some wheat to sow. Early sowings came up nicely. Crops all gathered, and plowing stubble-land is well under way. LITTLE MOUNTAIN.—The month was favorable for sowing grain. A larger acreage than usual has been sown. Stands are fine. NEWBERRY.—Although there have been heavy frost and ice, the second growth of cotton was not all killed. SANTUC.—There was no extreme weather during the month and the temperature was steadily about normal. The month was dry, and streams became very low, the rain that fell seemingly wetting only the surface soil, and there was no run off. SEIVERN.—The month was extremely dry. Wells and small creeks going dry. STATEBURG.—Rain on 5 days, and moderately heavy on one only, the 10th when 0.98 inch fell putting the soil into good condition for sowing oats. General killing frosts and thin ice on the 15th and 22nd. On account of the difficulty of securing laborers, some farmers have not finished picking cotton. SUMMERVILLE.—First ice on the 12th did no damage to plants, but ice on the 22nd hurt them slightly. TRENTON.—Precipitation 1.06 inches less than the normal for this month, and 15.75 less than the average for the first 11 months of the year. Wells are drying up and water is scarce. Rain badly needed for small grains, and to replenish wells.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. ‡ Maximum thermometer not standard. † Minimum thermometer not standard. § Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc.

### STATIONS.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.  
+ The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.

TOTAL PRECIPITATION FOR NOVEMBER, 1905.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1905.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATE AND CROP SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.

**SOUTH CAROLINA SECTION.**  
**J. W. BAUER, Section Director,**  
COLUMBIA, S. C.

VOL. VIII. COLUMBIA, S. C., DECEMBER, 1905. No. 12.

**CLIMATOLOGY FOR THE MONTH.**

**Temperature, in Degrees Fahrenheit.**

The mean temperature for December, 1905, was 45.2°, which is 2.1° below normal. The highest local mean was 50.6° at Allendale, the lowest was 38.0° at Greenville. The monthly extremes were a maximum of 77° at Walterboro on the 23rd, and a minimum of 16° at Greenville on the 5th, 6th and 7th, making the State range 61°. The greatest local monthly range was 53° at Gaffney and Seivern, the least was 38° at Winnsboro. The mean of the daily maximum temperatures was 54.7°, and of the daily minimum temperatures was 35.8°, making the average daily range 18.9°.

**Frosts.**

Frost, Killing, First of Season.—Beaufort 5th; Charleston 11th.

**Precipitation, in Inches.**

The precipitation averaged 7.25 inches, which is 3.96 above the normal. The greatest local amount was 11.18 at Chapels, the least was 3.18 at Kingstree. The greatest 24-hour fall was 4.20 at Liberty on the 2nd-3rd. The average number of days with rain was 10, ranging from 5 at Kingstree to 15 at Beaufort, Newberry and Summerville.

Sleet.—Anderson, Greenville, Little Mountain, Saluda 31st; Newberry 30th, 31st; Walhalla 16th, 31st.

Snow.—(Melting as it fell.) Anderson, Barksdale, Clarks Hill, Due West, Gaffney, Greenville, Liberty, Little Mountain, Newberry, Spartanburg, Walhalla, Santuc, Winnsboro, Winthrop College, Yorkville 31st.

Excessive Precipitation.—Allendale, 2-3rd, 3.00 in 13 hrs.; Anderson, 3rd, 3.08 in 22 hrs.; Blackville, 2-3rd, 2.68 in 13 hrs.; Camden, 2-3rd, 2.78 in 12 hrs.; Chappels, 20-21st, 3.48 in 24 hrs.; Clarks Hill, 20th, 4.00 in 24 hrs.; Clemson College, 2-3rd, 4.11 in 18 hrs.; Due West, 2-3rd, 2.68 in 13 hrs.; and 20th, 2.68 in 24 hrs.; Georgetown, 8th, 3.50 in 24 hrs.; Greenville, 2-3rd, 3.25 in 23 hrs.; Liberty, 2-3rd, 4.20 in 20 hrs.; Newberry, 19th-20th, 3.32 in 24 hrs.; Enoree, 2-3rd, 3.06 in 14 hrs.; St. Matthews, 3rd, 3.00 in 24 hrs.; Santuc, 20-21st, 4.13 in 24 hrs.; Seivern, 3rd, 2.80 in 24 hrs.; Smiths Mills, 8-9th, 2.60 in 24 hrs.; Trenton, 20-21st, 2.90 in 24 hrs.; Winnsboro, 28th, 2.60 in 24 hrs.

**Winds.**

The prevailing direction of the wind was from the north-east at 26 stations, from the north at 9, from the northwest at 6, from the east and west at 5 each, and from the south-west at 1 station.

High Winds.—Barksdale 1st; Beaufort 20, 31st; Bowman 1, 10th; Charleston 8th; Columbia 21st; Liberty 1, 14, 15, 20, 21, 22, 29th; Newberry 1, 10, 29th; Seivern 9, 20, 29th; Summerville 20th; Yorkville 9th.

**Weather.**

The average number of clear days was 12, of partly cloudy ones 4, and of cloudy ones 15.

**BAROMETER AND WIND TABLE FOR DECEMBER, 1905.**

**MISCELLANEOUS PHENOMENA (with dates).**

Solar Halos.—Beaufort 26th; Charleston 1st; Stateburg 19, 22, 26th.

Lunar Halos.—Blackville 11th; Charleston 3, 30th; Columbia, Little Mountain 6th; Saluda 30th; Stateburg 6, 30th.

Thunderstorms.—Beaufort 20, 23rd; Seivern 21st; Stateburg 28th; Summerville 26th. Summarized, there were 5 thunderstorms on 4 dates as follows: 2 on the 20th, 1 each on the 21st, 23rd and 28th. In addition Charleston reported thunderstorms on the 20th and 23rd.

Dense Fogs.—Aiken, Blackville, Cheraw 23rd; Charleston 20, 23, 28th; Columbia 3, 18, 19, 23rd; Greenville, Newberry 19th; Liberty 17, 18, 21st; Society Hill 19, 23rd; Winthrop College 23, 29th; Yorkville 3, 23rd.

**PROGRESS OF FARM WORK.**

Although the mean temperature was below normal, there was no severe cold wave, and but little freezing or ice, conditions favorable for the germination of wheat, oats and rye that was sown late in November and during this month, but over the western half of the State the precipitation was excessive, and the ground kept continuously too wet for cultivation, so that seeding operations could not be finished. In the eastern half of the State, there was less rainfall and seeding operations were practically finished.

Small grains that were up grew slowly but attained good stands, and became promising.

There was less than the usual amount of plowing done in preparation for spring crops owing mainly to the wet condition of the soil.

Winter truck needed more moisture early in the month, but during the second half it was supplied in abundance, and truck improved but suffered somewhat from lack of sunshine.

Remaining small portions of the corn, cotton and other crops were gathered early in the month, thus completing harvesting operations for the year.

## DECEMBER WEATHER.

The temperatures during December are of a decided winter type, with occasionally minimum temperatures below zero, and with one exception, always below 20°. There is a marked uniformity in the mean of the daily maximum temperatures, and a wide range in the daily minimum ones.

The precipitation is fairly constant, but the current year was an exception and had nearly twice the normal amount, having been the wettest December of record. The prevailing winds are from the northwest.

## Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|---------|------------|-----------|-----------|---------------|--------------|-------------|-------------------|
| 1894 .. | 48.1       | 56.8      | 39.7      | 85            | -1           | 7           | nw.               |

## CROP YIELDS AND WORTH, 1905.

In the December, 1905, Supplement of the "Crop Reporter", issued by the U. S. Department of Agriculture, are several tables giving the acreage, yield per acre, total production and farm value of the leading cereal, forage and some miscellaneous crops of the United States. The data are given by States, and it is believed that the importance of such knowledge and information to crop correspondents of this service, to aid them in making their weekly reports on conditions during the growing season, warrants re-printing the data in so far as crops grown in South Carolina are shown. In the tables, and in this article, cotton is omitted, as are the data for sweet potatoes, fruits, melons, berries and vegetable truck, which, if their value was known, would increase the farm value of all crops raised many fold over the figures herein given.

The figures are for the year 1905, and are approximately correct, and it is safe to say, as nearly so as it is possible to make them without a farm to farm canvass.

Of the crops given, corn is the leading staple crop in this State, with an acreage of 1,878,978, a yield of 10.9 bushels per acre, a total production of 20,480,860 bushels, worth \$15,155,836. It is perhaps worthy of note that Florida is the only State that had a smaller yield per acre and also that the average yield per acre for the United States was 28.8 bushels. The winter wheat acreage was 318,419, with an average yield of 6.1 bushels per acre, total production of 1,942,356 bushels, worth \$2,156,015. The acreage of oats

harvested was only 187,509, giving a yield of 16.3 bushels per acre, a total production of 3,056,397 bushels, worth \$1,681,018. The average yield per acre of oats for the United States was 34.0 bushels. The rye crop was a small one, there having been only 4,226 acres harvested, yielding 8.1 bushels per acre, a total production of 34,231 bushels, worth \$40,735. The rice crop included 15,477 acres, yielding 26 bushels of rough rice per acre, making the total production of rough rice 402,402 bushels, worth \$426,456. There were 9,250 acres planted to Irish potatoes, that yielded 83 bushels per acre, giving a total production of 767,750 bushels, worth \$790,782. There were 59,492 acres of grass cut for hay, yielding 1.42 tons per acre, a total yield of 84,492 tons, worth \$1,128,639. The tobacco acreage is given at the low figures of 12,574 acres, yielding 736 pounds per acre, making the total production 9,254,464 pounds, worth \$805,138.

A further study of the original tables shows that none of the crops enumerated had a yield per acre equal to, or above, the average for the same crop for the entire United States.

## REMARKS BY OBSERVERS.

AIKEN.—The month about 4° colder than usual, and was very wet, the rainfall having been nearly double the usual amount. BARKSDALE.—Snow fell for two hours on the 31st, but it soon melted. BATESBURG.—Small grains are up to good stands and look promising. BEAUFORT.—The mean temperature was 2.7° below normal, and the precipitation was 3.36 inches in excess. Frequent rains interfered very much with farm work, and some oats not yet sown. BOWMAN.—December was remarkable for its cloudy and rainy weather. Early sown grains look healthy and are growing nicely. Streams that were previously dry now have their usual flow of water. DILLON.—The month was an unusually wet one. GREENVILLE.—There was a trace of sleet on the 31st, which soon turned to snow, and the snow melted as it fell. HEATH SPRINGS.—Nearly normal temperature and excessive precipitation during December. Small grains did well. LIBERTY.—No plowing was done during the month which was unusually cloudy and wet. Small grain crops seem to be doing fairly well. Seeding has not been finished owing to the wet condition of the ground. NEWBERRY.—Cotton picking was finished and small grains sown. More than the usual amount of winter plowing was done. PINOPOLIS.—On the 20th there was a high wind accompanied by a marked and sudden rise in temperature. SANTUC.—It was a very wet month. There were a few heavy frosts, although the average temperature was below normal due to much cloudiness. The ground is saturated. SPARTANBURG.—The first snow of the season fell from 7:40 to 9 a. m. on the 31st, with another snow storm from 9:10 to 11 a. m. The snow melted as it fell. STATEBURG.—There were no very low temperatures during the month, but there was an excess in precipitation and much cloudiness, conditions very unfavorable for out door work, consequently but little farm work was accomplished. SUMMERVILLE.—There was a slight earthquake tremor at 11:15 p. m. on the 27th. TRENTON.—Precipitation was 5.30 inches more than the normal for December, and is 10.45 inches less than the normal for the year 1905.

## CLIMATOLOGICAL DATA FOR THE MONTH OF DECEMBER, 1905.

| STATIONS.                                 | Counties.         | Elevation—feet. | Length of record—years. | Temperature—in degrees Fahrenheit. |                            |          |       |         |       | Precipitation—in inches. |        |                            |                       |                            | Sky.               |                    |                            |                     | Observers.                  |

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation.    ¶ Maximum thermometer not standard.    † Minimum thermometer not standard.  
§ Exposed not standard.    \* On other dates also    a indicates 1 day missing, b, 2 days, etc.

### STATIONS.

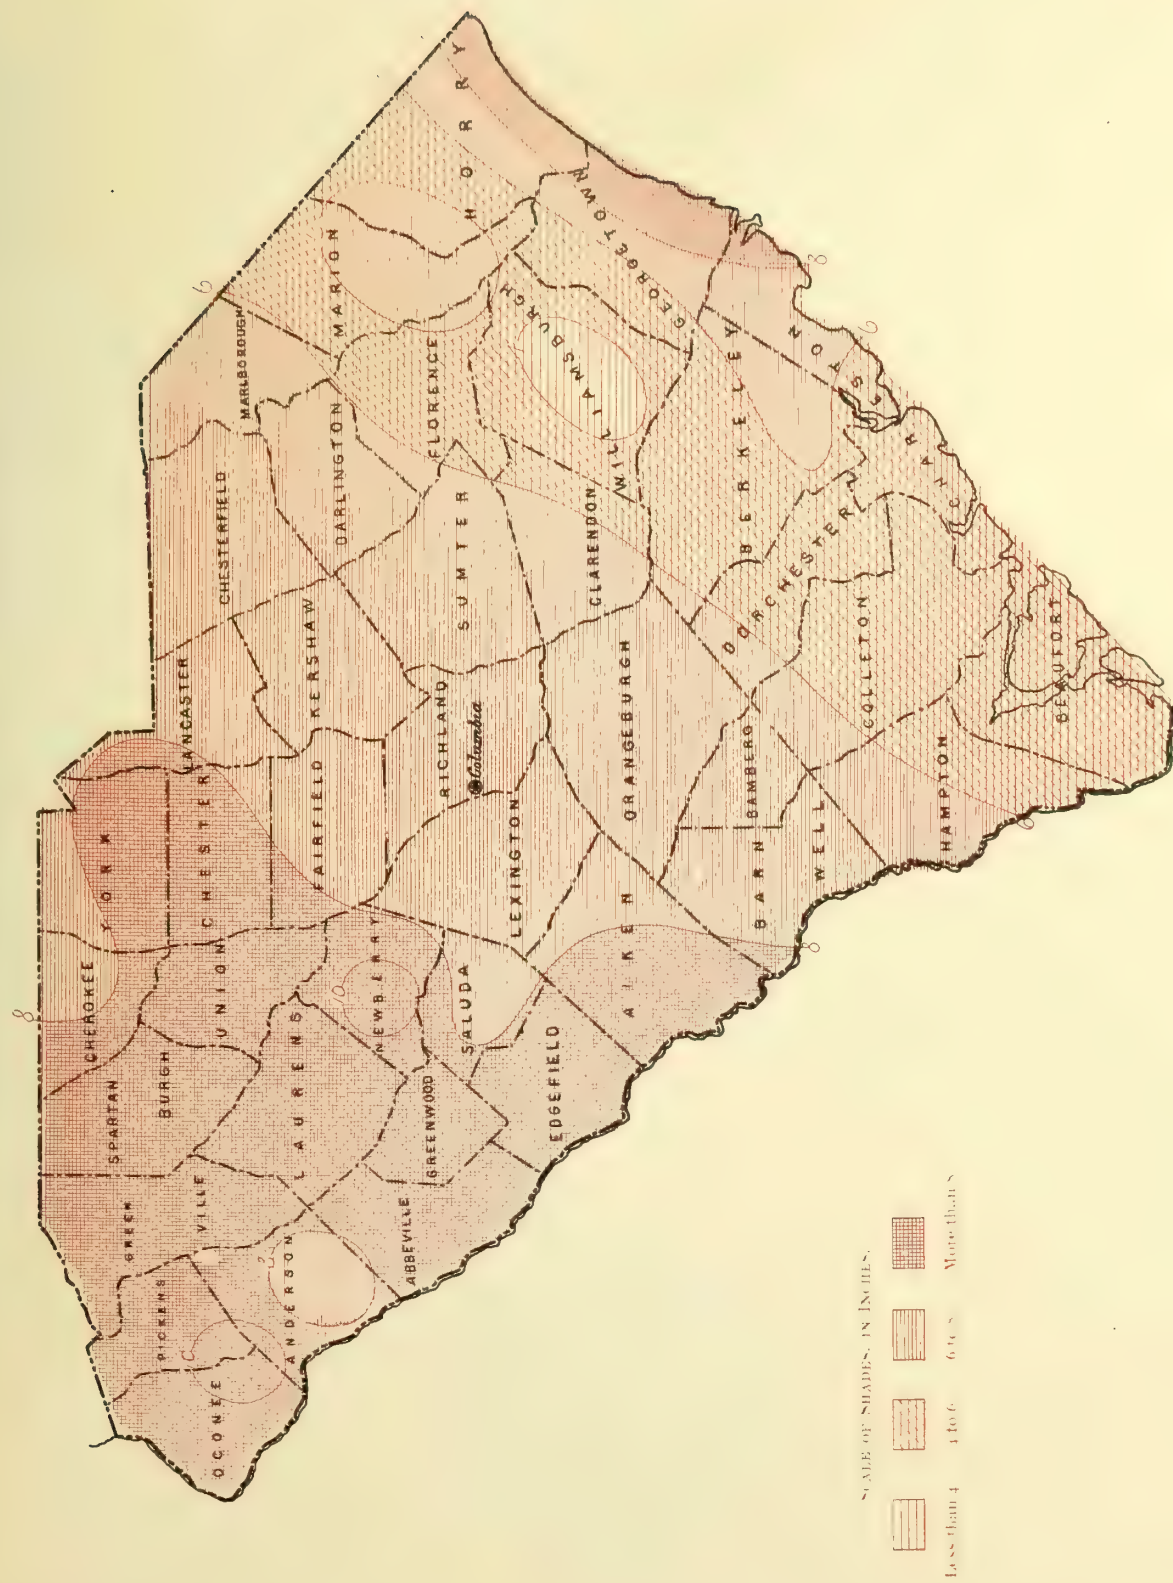

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.

† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.

TOTAL PRECIPITATION FOR DECEMBER, 1905.

DAILY PRECIPITATION FOR SOUTH CAROLINA, DECEMBER, 1905.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

## SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., JANUARY, 1906. No. 1.

## CLIMATOLOGY FOR THE MONTH.

## Temperature.

The mean temperature for January, 1906, was  $47.0^{\circ}$ , which is  $2.5^{\circ}$  above normal. The highest local mean temperature was  $52.8^{\circ}$  at Beaufort, the lowest was  $40.2^{\circ}$  at Greenville. The monthly extremes were a maximum of  $83^{\circ}$  at Walterboro on the 20th, and a minimum of  $12^{\circ}$  at Seivern on the 10th, making the State range  $71^{\circ}$ . The greatest local monthly range was  $68^{\circ}$  at Seivern, the least was  $39^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $56.1^{\circ}$ , and of the daily minimum temperatures was  $37.8^{\circ}$ , making the average daily range  $18.3^{\circ}$ .

## Precipitation.

The average precipitation for the State was 5.85 inches which is 2.53 inches above the normal amount. The greatest local monthly amount was 11.69 inches at Liberty, the least was 3.52 inches at Bennettsville. The greatest 24-hour fall was 4.65 inches at Walhalla on the 22nd. The average number of days with 0.01, or more, rainfall was 11, ranging from 5 at Edisto to 16 at Newberry.

## Excessive Precipitation.

Precipitation amounting to 2.50 inches, or more, in 24 hours was recorded as follows: at Anderson, on the 3rd, 2.80 inches in about 16 hours; at Barksdale, on the 3rd, 2.80 inches in about 24 hours; at Clemson College, on the 3rd, 4.33 inches in 24 hours; at Conway, on the 11th-12th, 2.90 inches in 24 hours; at Effingham, on the 25th-26th, 2.50 inches in 24 hours; at Greenville, on the 3rd-4th, 2.50 inches in 24 hours; at Liberty, on the 3rd, 4.20 inches in 24 hours; at Smiths Mills, on the 26th, 2.50 inches in 24 hours; at Walhalla, on the 22nd, 4.65 inches in 24 hours; at Yorkville, on the 3rd, 2.59 inches in 24 hours.

## Wind.

The prevailing direction of the wind was from the north-east at 17 stations, from the west at 10, from the southwest at 9, from the south at 4, from the northwest at 2, and from the southeast at 1 station.

HIGH WINDS.—Anderson, Columbia 22nd; Beaufort 3rd; Bowman 9th, 22nd; Charleston 25th; Liberty 4th, 5th, 6th; Seivern 10th, 17th, 25th; Yorkville 24th.

## Snow.

A trace of snow occurred in the northeastern portion of the State on the 9th. A snow storm covered the western half of the State on the 26th and 27th, during which time the snow accumulated on the ground to a maximum depth of 7.7 inches, at Greenville. At most places it was accompanied by rain and sleet, at intervals.

## Sleet.

A trace of sleet occurred at Summerville on the 9th and at Greenville on the 11th. A general sleet storm covered the western and central portions of the State from the evening of the 25th to the morning of the 27th, generally mixed with snow and some rain.

## Sunshine and Cloudiness.

The average number of clear days was 12, partly cloudy days 4, and cloudy days 15.

## Hail.

Hail was noted at Liberty and at Newberry on the 22nd during the occurrence of a thunderstorm.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—Beaufort 16th; Stateburg 24th.

LUNAR HALOS.—Bowman 8th; Charleston 1, 8, 10th; Columbia 1st; Greenville 7, 17th; Little Mountain 1, 17th; Santuc 2, 8th; Stateburg 1, 7, 10th.

THUNDERSTORMS.—Aiken, Barksdale, Batesburg, Blackville, Charleston, Clemson College, Columbia, Darlington, Greenville, Heath Springs, Liberty, Little Mountain, Newberry, Santuc, Spartanburg, Stateburg, Trenton, Trial, Yemassee 22nd; Bowman, Summerville, Winthrop College 23rd; Seivern 4, 23rd.

DENSE FOGS.—Barksdale 19, 25th; Blackville, Newberry 19, 21st; Bowman 18, 19, 20th; Charleston 12, 19, 31st; Cheraw 31st; Columbia 3, 19, 21, 30th; Greenville 15, 21st; Liberty 14, 15th; Little Mountain 21, 27th; Santuc, Seivern 20, 21st; Society Hill 19, 21, 29, 30th; Summerville 19, 31st; Trial 19th; Winthrop College 3, 21st; Yorkville 13, 20, 21, 28, 29, 30th.

## WEATHER AND CROP CONDITIONS.

The temperature was generally above normal during January, although there were two periods of moderately cold weather. During the first period, from the 9th to the 11th, minimum temperatures of 32°, or lower, were noted in all portions of the State, but the cold weather was not severe enough to injure small grain crops, or even tender crops in the coast regions. Over the western counties the ground froze to a considerable depth and it was without protection from a covering of snow, but there was little alternate freezing and thawing, and practically no damage to either wheat or oats from that source. During the second cool period the ground was covered with snow in that portion of the State that had freezing temperatures, and small grain crops again escaped injury. Beginning on the 20th and ending on the 24th, there was a period of abnormal warmth during which about the highest January maximum temperatures were recorded at many stations, and the highest State maximum temperature for January that has been recorded during the last 13 years, occurred at Walterboro. The heat stimulated the budding of fruit trees, and in Dorchester county peach trees began to bloom. The cold weather that followed the heat wave closely, checked further development of fruit buds in the central and western counties, but was not severe enough to destroy them.

The precipitation was in excess of the normal January amount in all portions of the State, but it was heaviest in the extreme northwestern counties, where, in places, more than twice the normal amounts were recorded. The soil was kept nearly saturated and entirely too wet to permit of plowing, or other forms of preparation for spring planting usual to the month, in the western half of the State, while in the eastern half, where there was less rainfall, some plowing was done on uplands.

Winter truck made favorable growth, and shipments of radishes and lettuce were made from the southern coast districts.

The heavy rainfall did not cause any floods or inundations, but filled all swamps with water to a greater depth than usual, and all streams and water courses had more than their normal flows.

## JANUARY WEATHER.

January's weather represents mid-winter conditions in South Carolina, as its average temperature is somewhat lower than that of either the preceding or following month, although the difference between the mean temperature for January and that for February is less than half a degree, as deduced from the last twelve year's observations. The extremes of temperature have ranged between a maximum of 83° at Walterboro in 1906, and a minimum of 3° at Walhalla in 1897 and at Liberty in 1900. The average date of the occurrence of the maximum temperature is the 14th, indicating that the warmest days are as likely to occur during any part of the month as in any particular decade. So the average date of the minimum temperature is the 12th, from which it may be inferred that the coldest weather is likely to occur during the first two decades.

The average precipitation varied between 7.31 inches in 1895 and 1.81 inches in 1898, and the range at different stations has been between a maximum amount of 11.69 inches at Liberty in 1906, and a minimum amount of 0.30 inch at St. George in 1905. A considerable proportion of the precipitation has usually been in the form of snow or sleet, in the extreme northwestern part of the State, while in the central and eastern parts practically all has been in the form of

rain with only on occasional years that snow or sleet fell to a measurable depth. The data in the accompanying tables are State averages and extremes since 1894.

## Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|---------|------------|-----------|-----------|---------------|--------------|-------------|-------------------|
| 1894 .. | 47.9       | 57.6      | 40.6      | 77            | 19           | 10          | ne.               |

| 1906 .... | 5.85           | 11.69             | Liberty.     | 3.52           | Bennettsville. |

## OBSERVERS NOTES.

BARKSDALE.—On the 26th rain and snow froze on trees to a considerable thickness, and the accompanying high winds did much damage to timber, uprooting trees and breaking off limbs of fruit trees. BATESBURG.—Fruit trees began to show signs of budding, from the 20th to the 23rd, but budding was checked by the cold wave of the 25th to 27th. There were sleet and snow on the 25th and 26th. BEAUFORT.—The mean temperature was 2.5° below normal, and the precipitation was 2.95 inches in excess. Early truck is well advanced in growth. Radishes and tomatoes are being shipped. The acreage devoted to oats is smaller than usual. BOWMAN.—There was an excess of cloudiness during the first three weeks with generally clear weather during the last week. Small grain crops became very promising. Briar bushes began to bud, and cabbage plants were set out. GREENVILLE.—There was a light fall of snow on the 11th which melted as it fell; on the 26th and 27th snow accumulated on the ground to a depth of 7.7 inches. HEATH SPRINGS.—Both the temperature and the precipitation were above normal during January, and the ground was too wet to permit much plowing to be done. Small grain crops look well. LIBERTY.—Like the preceding one, the month was very wet and no farm work could be done. Small grain crops look fairly well. There was one heavy snow storm. Wheat and oats sowing has not been finished. NEWBERRY.—On the evening of the 3rd, there was a wave of warm air that felt like heat from a furnace. On the night of the 31st, about 9 p. m., a very bright meteor passed to the south-by-east. No plowing, and very little other farm work, was done this month. SANTUC.—The month was mild, but with much cloudiness and rain. There were but four partly cloudy days. Only one snow storm, which occurred on the 26th, and it was mixed with occasional rain and sleet. Fall sown oats look well.

## CLIMATOLOGICAL DATA FOR THE MONTH OF JANUARY, 1906.

| STATIONS.                             | Counties.    | Elevation—feet. | Length of record—years. | Temperature—in degrees Fahrenheit. |                            |          |       |         | Precipitation—in inches. |                       |        |                            |                       | Sky.                       |                    |                    |                            |                       | Observers. |                               |

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.

§ Exposed not standard. \* On other dates also a indicates 1 day missing. b, 2 days, etc.

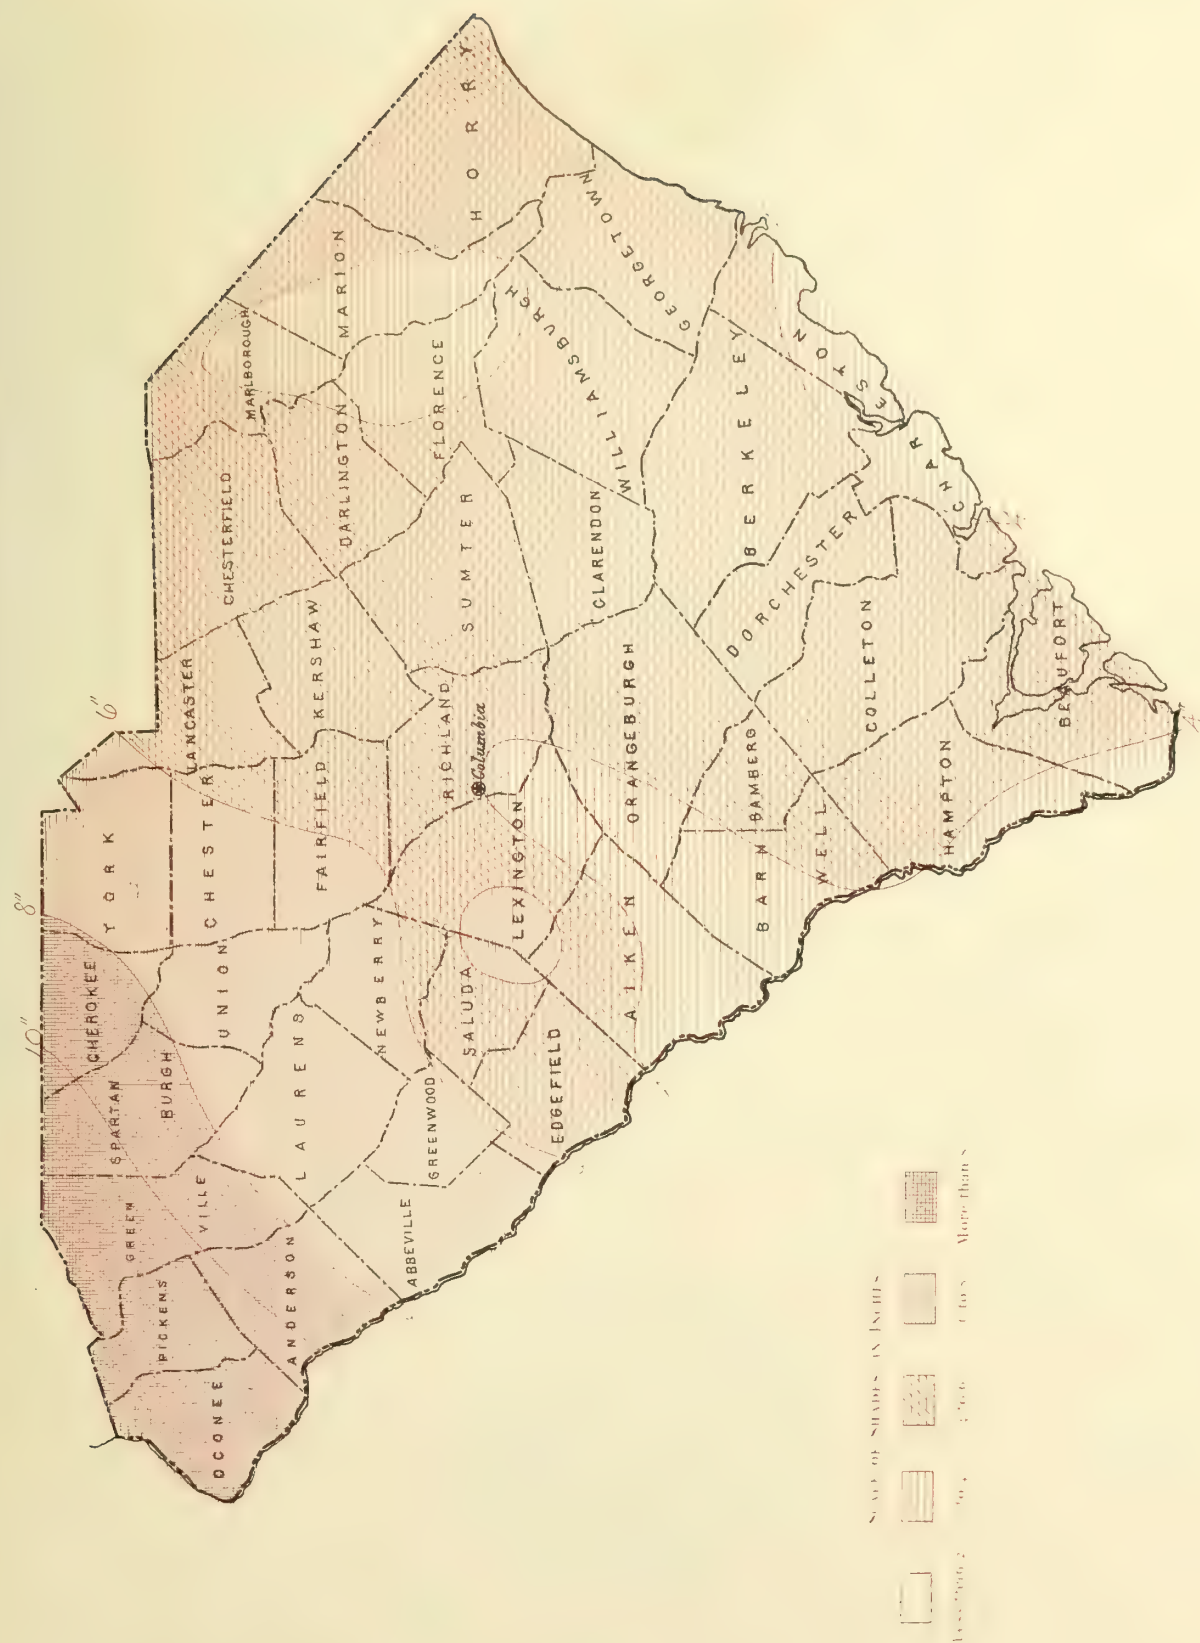

STATIONS.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day, on which it nearly always occurs. The date for Sundays and Mondays taken on Monday mornings and Monday evenings and Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR JANUARY, 1906.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR FEBRUARY, 1906.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATOLOGICAL SERVICE**  
 OF THE  
**WEATHER BUREAU.**  
 CENTRAL OFFICE: WASHINGTON, D. C.

**SOUTH CAROLINA SECTION,**  
 J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., FEBRUARY, 1906. No. 2.

**GENERAL SUMMARY.**

The month began with the temperature ranging below normal, due a persistent cold-wave, and the temperatures continued low, with frequent rains, some snow and one general sleet and ice storm, during the first half of the month, while during the second half the weather was generally warm and dry, until on the last day a cold wave crossed the State that caused freezing temperatures from the mountains to the coast. The monthly extremes of temperature were well within previously recorded bounds.

The precipitation ranged from about an inch, in the extreme northwestern portion, to nearly eight inches on the coast in Georgetown County. The increase from west to east was in quite regular gradation. The snowfall was confined to the northern half of the State, with the greatest depths in Newberry County, and in the bordering portions of surrounding counties, where it amounted to somewhat more than two inches.

There were more bright sunny days than are usual to the month, especially during the second half, and there were no destructive storms, or other unusual phenomena worthy of comment. The rivers maintained about normal winter depths of flow steadily throughout the month.

As a whole, February, 1906, had practically normal weather, except for the deficiency in precipitation over the central and western counties.

**Temperature.**

The mean temperature for February, 1906, was 46.0°, which is 0.7° below normal. The highest local mean was 50.6° at Beaufort, the lowest was 40.4° at Greenville. The extremes for the month were a maximum of 76° at Conway and Summerville on the 25th and at Walterboro on the 20th, and a minimum of 12° at Liberty on the 5th, making the State range 64°. The greatest local monthly range was 59° at Seivern, the least was 40° at Charleston. The mean of the daily maximum temperatures was 57.2° and of the daily minimum temperatures was 34.8°, making the average daily range 22.4°.

**Precipitation.**

The average precipitation for the State was 2.58 inches which is 2.20 inches below the normal amount. The greatest local monthly amount was 7.26 inches at Georgetown, the least was 0.96 inch at Greenville. The greatest 24-hour fall was 2.80 inches at Georgetown on the 12th. The average number of days with 0.01 inch, or more, rainfall was 6, ranging from 3 at Allendale, Enoree and Walhalla to 11 at Yemassee.

**EXCESSIVE PRECIPITATION.**—At Georgetown on the 12th, 2.80 inches in 24 hours.

**HAIL.**—Hail was reported in connection with the occurrence of thunderstorms as follows: Cheraw 22nd; Dillon, Winthrop College 27th; Walterboro 26th.

**SLEET.**—Sleet was noted on four dates, and at fifteen stations as follows: Aiken, Barksdale, Bowman, Heath Springs, Saluda 8th; Batesburg, Clarks Hill 7th, 8th; Blackville, Columbia, Darlington, Little Mountain 7th; Georgetown 6th; Santuc, Yorkville 8th, 12th.

**SNOW.**—There was but one storm with snow during the month, although the snow fell on three dates, and was noted at twenty-two stations as follows: Anderson, Barksdale, Calhoun Falls, Camden, Cheraw, Clemson College, Dillon, Due West, Greenville, Greenwood, Heath Springs, Liberty, Little Mountain, Newberry, Santuc on the 7th; at Blairs, Chappels, Saluda 7th, 8th; Society Hill, Spartanburg 6th.

**Wind.**

The prevailing direction of the wind was from the north-east at 23 stations, from the north at 11 stations, from the east at 8 stations, from the northwest at 4 stations, from the southwest at 3 stations, and from the east and south at 2 stations each.

**HIGH WINDS.**—Occurred at Barksdale, Beaufort (gale), Bowman, Clarks Hill, Newberry, Saluda, Trenton, Walhalla, Yorkville 27th; Charleston 12th; Columbia 21st, 28th; Liberty 1st, 14th, 23rd; Seivern 22nd, 28th.

**Sunshine and Cloudiness.**

The average number of clear days was 16, of partly cloudy days was 5, and of cloudy days was 7.

**BAROMETER AND WIND TABLE FOR FEBRUARY, 1906.**

**MISCELLANEOUS PHENOMENA.**

**SOLAR HALOS.**—Solar halos were noted at Seivern on the 17th, and at Stateburg on the 5th, 15th.

**LUNAR HALOS.**—Lunar halos were noted at Blackville on the 1st; at Charleston on the 1st, 4th, 5th; at Santuc (corona) 10th; Stateburg 4th, 5th.

**DENSE FOGS.**—Dense fogs of one hour, or longer, duration occurred on five dates, at the following stations: Columbia 20th; Greenville, Yorkville 5th; Liberty 9th, 25th.

**THUNDERSTORMS.**—Thunderstorms occurred on six dates, and were reported from the following stations: Barksdale 24th; Beaufort, Bennettsville, Bowman, Columbia, Darlington, Liberty, Society Hill, Trial, Walhalla, Yemassee, Yorkville on the 21st; Cheraw 22nd; Dillon 21st, 27th; Georgetown 20th; Winthrop College 27th; Walterboro 26th.

## OBSERVERS' REMARKS.

BEAUFORT.—The mean temperature was 2.2° below normal, and the precipitation was 1.13 below. The slight freeze on the 28th did very little damage. BOWMAN.—The first maple tree bloom was seen on the 5th, and the first peach bloom on the 18th. CLARKS HILL.—The first open peach bloom was noted on the 23rd. The freeze on the 28th did no material damage. LIBERTY.—Peach buds began to swell during the latter portion of the month. NEWBERRY.—The first plum tree blooms were noted on the 24th. SANTUC.—The month was mild and had an unusual number of fair days. Sleet fell on two dates. STATEBURG.—The first half of the month had considerable cloudiness and rain, with low temperatures, but the second half was more favorable for outdoor work. SUMMERVILLE.—The thunderstorm on the 21st was an unusually heavy one for February. TRENTON.—The precipitation was 4.91 inches less than the February average, and is 3.71 inches less than the normal for the first two months of the year.

## FEBRUARY WEATHER.

There is no other month, in South Carolina, that has so variable weather as there has been noted in February. The temperature range that has been recorded during the past twelve years has been between a maximum of 86° at Florence in 1904, and a minimum of -11° at Shaw's Fork and Santuc in 1899. On three years the minimum has fallen to, or below, zero in some portion of the State, and on five years it has risen to, or above, 80°. The monthly mean temperature has ranged from 37.4° in 1895 to 50.0° in 1897. Although it is not shown by the following tables, the changes from warm to cold and from cold to warm are, at times, sudden and violent, especially the first named ones. The records do not indicate that one portion of the month has been either much warmer or decidedly colder than any other portion, although the daily normals that have been deduced from the daily mean temperatures are about 4° higher at the end than at the beginning of the month. There is a marked difference in temperature between the extreme northwestern and the extreme southeastern portions. In the former, the weather continues as cold and wintry as during the preceding mid-winter month; in the latter portion the conditions are usually typically springlike, as early vegetation becomes green, and fruit trees begin to bud and bloom. Light to killing frosts usually occur in the southeastern counties, but it is only rarely that the temperature falls to freezing, and more rarely that the ground freezes.

The precipitation also has been variable in amount, as the State average range has been between a maximum amount of 7.80 inches, in 1897, and a minimum amount of 0.86 inch, in 1898. The local monthly amounts have ranged between 12.48 inches at Clemson College, in 1903, and 0.34 inch at St. George, in 1898. The table shows that the wettest February (1897) was followed one year later by the driest one (1898).

The snowfall during this month is usually heavier than on any other month. There has been some snow in the State in each February during the last twelve years, but in 1903 the snowfall was only a trace, and that amount was recorded at only two stations. The greatest accumulated depth that has been recorded was 18.5 inches at Holland, Anderson County, in 1895, and the next greatest depth was 14.7 inches at Stateburg, in 1899. Snow storms are most frequent, as might be expected, over the northern half of the State, while it is only

on occasional years that snow falls in the southeastern group of counties, although in 1899 it fell to a depth of 2.2 inches at Beaufort, which was the heaviest snowfall ever recorded in that county.

There are usually more clear days than either partly cloudy or cloudy ones, and the average number of days with 0.01 inch, or more, precipitation has ranged between 3, in 1898, and 12, in 1899.

The following tables show the more important climatic features, in State averages, for the last 12 years.

Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |
|---------|------------|-----------|-----------|---------------|--------------|-------------|-------------------|
| 1894 .. | 48.9       | 57.7      | 40.1      | 76            | 16           | 10          | sw.               |
| 1895 .. | 37.4       | 45.5      | 29.2      | 78            | -6           | 7           | nw.               |
| 1896 .. | 48.2       | 59.8      | 37.7      | 81            | 5            | 8           | sw.               |
| 1897 .. | 50.0       | 59.3      | 40.7      | 83            | 15           | 11          | sw.               |
| 1898 .. | 44.5       | 56.6      | 32.4      | 78            | 10           | 3           | w.                |
| 1899 .. | 43.0       | 52.5      | 33.4      | 80            | -11          | 12          | w.                |

| 1906.... | 2.58           | 7.26              | Georgetown.      | 0.96           | Greenville.  |

## ERRATA.

The following corrections should be made on the January, 1906, Monthly Report. Pages 5 and 8, Blackville, total precipitation 3.68 should be 3.88 inches; Gaffney, total precipitation 8.90 should be 9.10 inches. On page 8, Blackville, precipitation on the 26th 0.25 should be 1.25 inches. On page 6, Newberry, maximum temperature on the 24th 50° should be 62°; at Heath Springs the maximum temperature on the 24th should be changed from 52 to 58; at Yorkville the maximum temperature on the 24th, 46 should be 54, and on the 25th, 35 should be 38.

## TITLE OF PUBLICATION CHANGED.

Beginning with the present issue, this publication will be known as the Monthly Report of the South Carolina Section of the Climatological Service of the Weather Bureau. It succeeds the Climate and Crop Service series of monthly reports heretofore published in this form. The crop feature is omitted, but in other respects the character of the publication is unchanged.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
 § Exposed not standard. \* On other dates also a indicates 1 day missing, b, 2 days, etc.

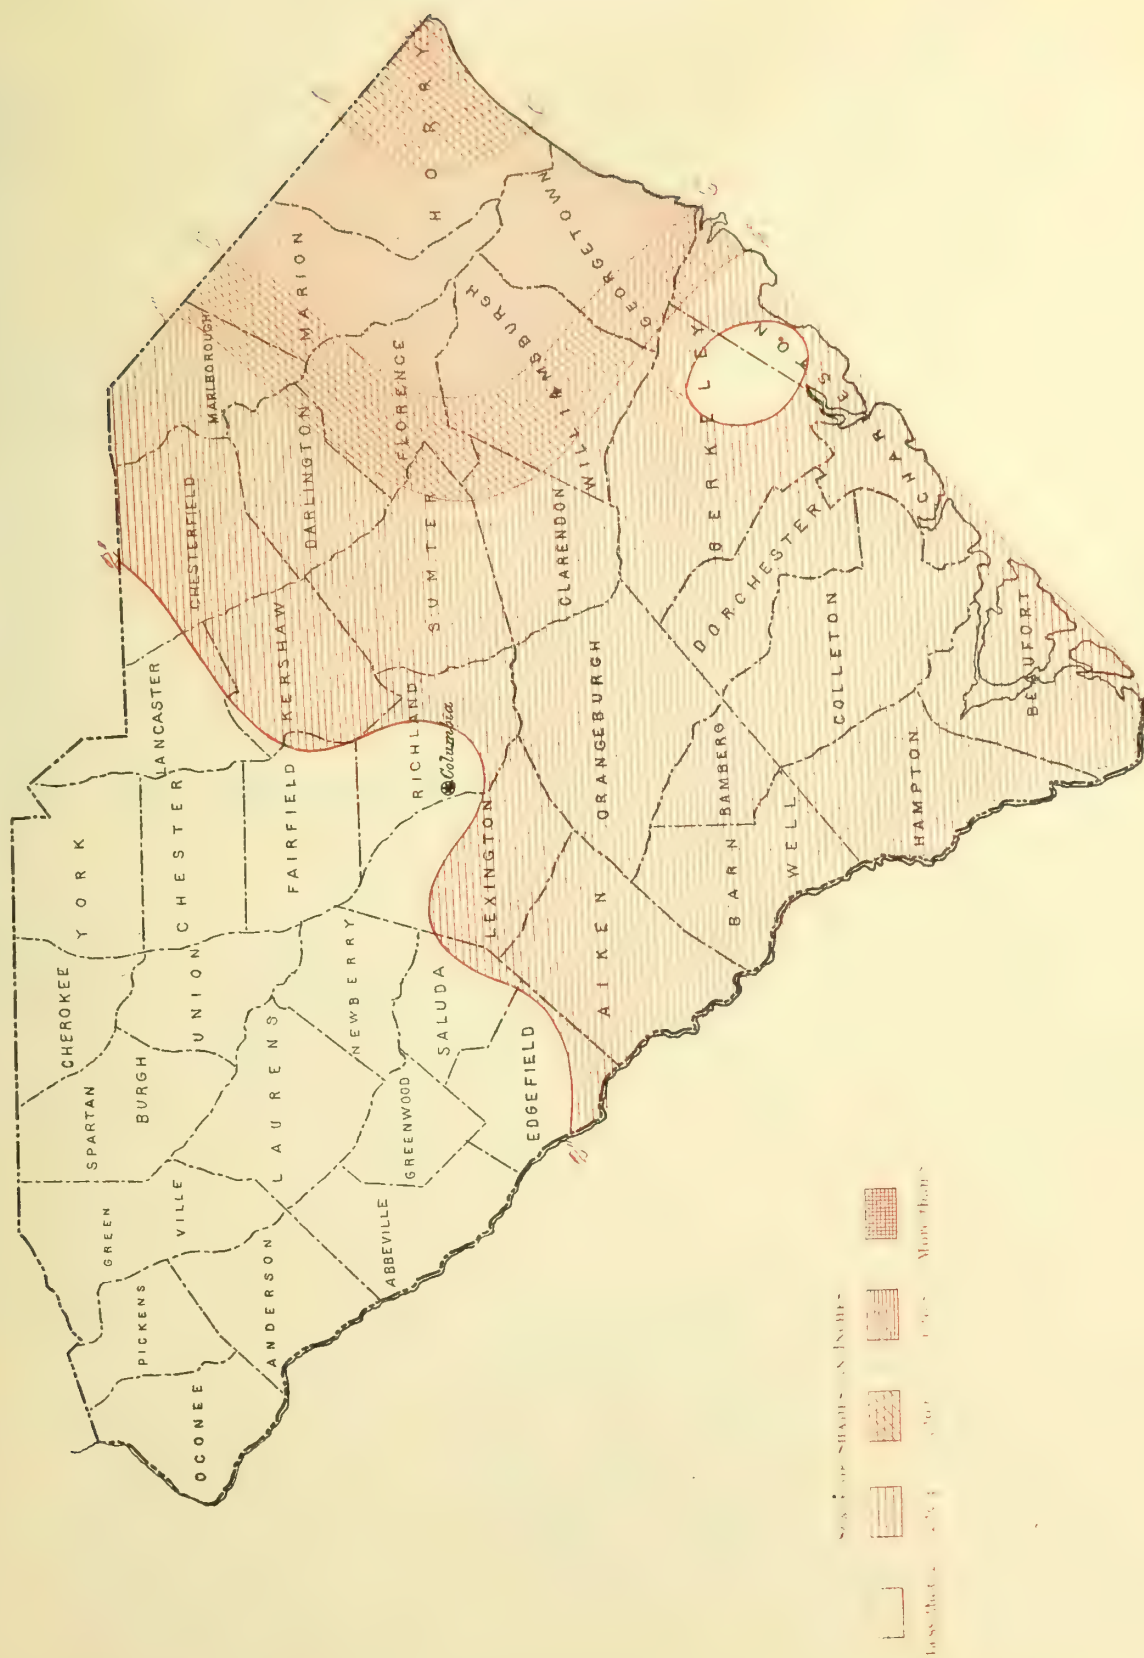

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING FEBRUARY, 1908.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR FEBRUARY, 1906.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, FEBRUARY, 1906.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. IX.

COLUMBIA, S. C., MARCH, 1906.

No. 3.

## GENERAL SUMMARY.

The mean temperature for the current March was as low as the lowest of record for the last thirteen years, the previous coldest March having been that of 1900. The mean of the daily maximum temperatures was the lowest of record, and the mean of the daily minimum temperatures was the second lowest of record, as March, 1900, had a mean minimum 0.2° lower. Higher maximum temperatures were recorded in 11 of the 13 years, but in 1900 the highest maximum was only 79°, or three degrees lower than it was this year. The coldest period was at the beginning of the third decade, generally on the 21st, when minimum temperatures of 32°, or lower, were noted at every station except at Beaufort, Charleston and Kingstree, and thin ice was noted over the entire State on that date to within a few miles of the coast. The warmest weather of the month occurred in the second decade, generally from the 11th to the 14th, inclusive, after which the temperature was below normal the greater portion of the time to the close of the month.

The precipitation was in excess of the normal amount over the State except that the stations at Aiken and Charleston reported slight deficiencies. The heaviest rainfall occurred in the extreme northwestern counties in the mountain districts, and from thence the amounts decreased in quite regular gradation toward the coast. This was a reversal of the preceding February rainfall distribution. There were five distinct periods during which precipitation was recorded at every station, as follows: On the 3rd, the 8th, the 15th, the 19th, and from the 27th to the 29th, inclusive, while different localities had rain, sleet or snow on the 24th and 25th. A trace of snow was noted at Little Mountain on the 24th, and two stations reported sleet on the 25th.

There was more cloudiness than is usual to this month, but there were no destructive wind storms or any other unusual phenomena. The rivers in the central portion of the State were swollen to the danger line on the 20th by the heavy rains of the 19th.

## Temperature.

The mean temperature for March, 1906, was 51.6°, which is 2.9° below normal. The highest local mean was 57.0° at Beaufort, the lowest was 44.4° at Greenville. The extremes of temperature for the month were a maximum of 82° at Blackville on the 14th, and at Summerville and Waterboro on the 12th, and a minimum of 18° at Greenville on the 21st, making the State range 64°. The greatest local monthly range was 61° at Seivern, the least was 43° at Kingstree. The mean of the daily maximum temperatures was 62.4°, and of the daily minimum temperatures was 40.8°, making the average daily range 21.6°.

## Precipitation.

The average precipitation for the State was 5.34 inches, which is 1.41 inches above the normal amount. The greatest local monthly amount was 10.25 inches at Walhalla, the least was 3.26 inches at St. Matthews. The greatest 24-hour fall was 2.50 inches at Walhalla on the 19th. The average number of days with 0.01 inch, or more, of precipitation was 10, ranging from 4 at Bowman to 14 at Bennettsville.

HAIL.—No hail was reported during the month.

SLEET.—Sleet was reported from Santuc and Yorkville on the 25th.

SNOW.—Little Mountain, trace on the 24th.

## Wind.

The prevailing direction of the wind was from the northeast and the west at 13 stations each, from the southwest at 11 stations, from the east at 7 stations, from the south at 4 stations, and from the north and the southeast at 2 stations each.

HIGH WINDS.—At Beaufort and Columbia on the 3rd, at Bowman on the 19th, 20th, at Charleston and Somerville on the 19th, at Cheraw and Clarks Hill on the 20th, at Liberty on the 11th, at Santuc on the 2nd, and at Trial on the 15th, 19th, and 20th.

## Sunshine and Cloudiness.

The average number of clear days was 13, of partly cloudy days was 6, and of cloudy days was 12.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—Solar halos were observed at Charleston on the 10th, and at Stateburg on the 12th, 23rd, 26th.

LUNAR HALOS.—Lunar halos were observed at Blackville on the 2nd, at Charleston on the 1st, 6th, 10th; at Columbia on the 3rd, 6th; at Little Mountain on the 1st, 6th; at Santuc on the 1st, 2nd; at Stateburg on the 1st, 2nd, 3rd, 6th, 11th; and at Winthrop College on the 2nd, 11th.

DENSE FOGS.—Dense fogs of one hour, or longer, duration were noted as follows: At Beaufort on the 2nd; at Blackville on the 14th, 19th, 20th; at Columbia on the 19th; at Greenville on the 28th; at Liberty on the 9th, 10th; at Little Mountain, Newberry, and Yorkville on the 29th; at Seivern on the 13th; and at Winthrop College on the 9th, 28th.

THUNDERSTORMS.—There were 24 thunderstorms noted during the month, with 10 dates of occurrence, distributed as follows: Beaufort, Charleston 19th, 20th, 30th; Blackville, Bowman, Darlington, Winthrop College, Stateburg 29th; Columbia 8th, 19th, 28th; Liberty 27th; Newberry 15th; Santuc 19th; Seivern 14th, 20th, 30th, 31st; Summerville 19th, 28th, 29th.

## OBSERVERS' REMARKS.

BATESBURG.—Ice one-half inch in thickness formed on the morning of the 21st. BEAUFORT.—The mean temperature was 1.5° below normal; the precipitation was 0.28 inch in excess of the normal amount. Plum trees were in full bloom on the 1st; peaches, pears and jessamine on the 4th, and blackberries on the 25th. The first chuck-will was heard on the 15th. BOWMAN.—The month was remarkable for the number of partly cloudy and cloudy days. Poplar trees began to bud on the 6th, gum trees on the 18th, and hickory trees on the 31st. DILLON.—The first martin was seen on the 10th, and the first poplar buds on the 20th. Apple blossoms were first noted on the 25th. LIBERTY.—The frequent rains kept the soil very wet throughout the entire month, delaying farm work. SANTUC.—The month was wet and cold, which retarded the budding and leafing of trees. SOCIETY HILL.—The mean temperature was 4.9° below normal. The cold weather was adverse to planting and growth of vegetation. STATEBURG.—The advent of Spring was delayed by the prevailing cool weather, due to a succession of cool waves with almost weekly regularity, with killing frosts as late as the 26th on low lying lands. SUMMERVILLE.—Early vegetation was seriously damaged by the frost and freezing temperature on the 21st. TRENTON.—The precipitation was 2.28 inches more than the March normal amount, and since January 1st it is 1.43 inches less than the average for the first three months. ROCK HILL.—The soil was in good condition for cultivation throughout the month.

## MARCH WEATHER.

The beginning of March marks the advent of spring in South Carolina. There is a steady and practically uniform increase in warmth, during this month, from the first to the last day. The daily average temperature is about 8° higher on the last day than it was on the first, the increase being at a uniform rate of about 1° for every four days. It is also the month for fruit trees of all varieties, save exceptionally early or very late ones, to reach a full blossoming stage, in all portions of the State, and for budding forest trees to show their first tinge of verdure. Fields are prepared for all kinds of crops, and gardens are planted, while vegetation begins its growing season. During this month the last of the winter resident, and other migratory birds leave for more northern regions, and it is the active mating season for those birds that summer here.

As in all transition periods, the weather maintains no uniform phase, but differs widely from year to year. The last thirteen years shows a difference in the monthly average temperature between 60.4° in 1903, and 51.6° in 1900 and 1906. The lowest average that has been noted is higher than the highest February average, while the highest average for March is somewhat in excess of the April normal temperature. There is less difference between the monthly average maximum temperatures for different years than there is between the monthly average minimum temperatures, or, expressed in other words, there has been a wider range in the night than in the day temperatures. The highest maximum in the last 13 years was 93°, at Gillisonville in 1896 and at Waterboro in 1905; the lowest minimum during the same period was 10°, at Liberty in 1901. In six of the thirteen years for which

data are available, the maximum temperature rose to, or above, 90° in some portions of the State; with the 23rd as the average date of occurrence of the maximum, while on two years only did the maximum occur earlier than the 15th. Likewise in six of the thirteen years a minimum of 20°, or lower, was recorded in some portion of the State, usually in one or more of the western or northwestern counties, and in five of these years the date of occurrence was after the 15th, although the 10th is the average date of occurrence of the lowest temperature.

The precipitation is usually copious during March, but is rarely excessive. The smallest State average was 2.08 inches in 1894, and the largest was 5.92 inches in 1903. The geographical distribution is fairly well shown by the fact that stations in the western half of the State have the larger average amounts, while, tentatively, the tendency appears to be toward a greater constancy, or less variation from year to year, at stations in the eastern half, although it will require a much longer record to positively establish this preliminary deduction. There also appears to be a certain persistence in heavy rains in certain localities as indicated by the station at Trenton having had the heaviest monthly amount in three out of the last thirteen years, during which time reports were received from an average of about 50 rainfall stations; the station at Greenville had the heaviest rainfall in two years, at the station at Walhalla in two years. These may be, and probably are, purely accidental coincidences.

Snow has been recorded in five years, but the average amounts have been traces only. The prevailing direction of the wind was from the southwest in eight years, from the northeast in four years, and from the west in one year. The average number of clear days has been 12, of partly cloudy days 9, and of cloudy days 10.

## Temperature, Rainy Days and Wind.

| Year.   | Mean Temp. | Mean Max. | Mean Min. | Highest Temp. | Lowest Temp. | Rainy Days. | Prevailing Winds. |

## ERRATA.

The following corrections should be made on the February number of the Monthly Report. On page 14, the maximum temperature at Newberry on the 7th, 32°, should be 35°, and the mean maximum 56.1° should be 56.2°.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. § Exposed not standard. \* On other dates also. † Minimum thermometer not standard.

## CLIMATOLOGICAL REPORT: SOUTH CAROLINA SECTION.

MARCH, 1906.

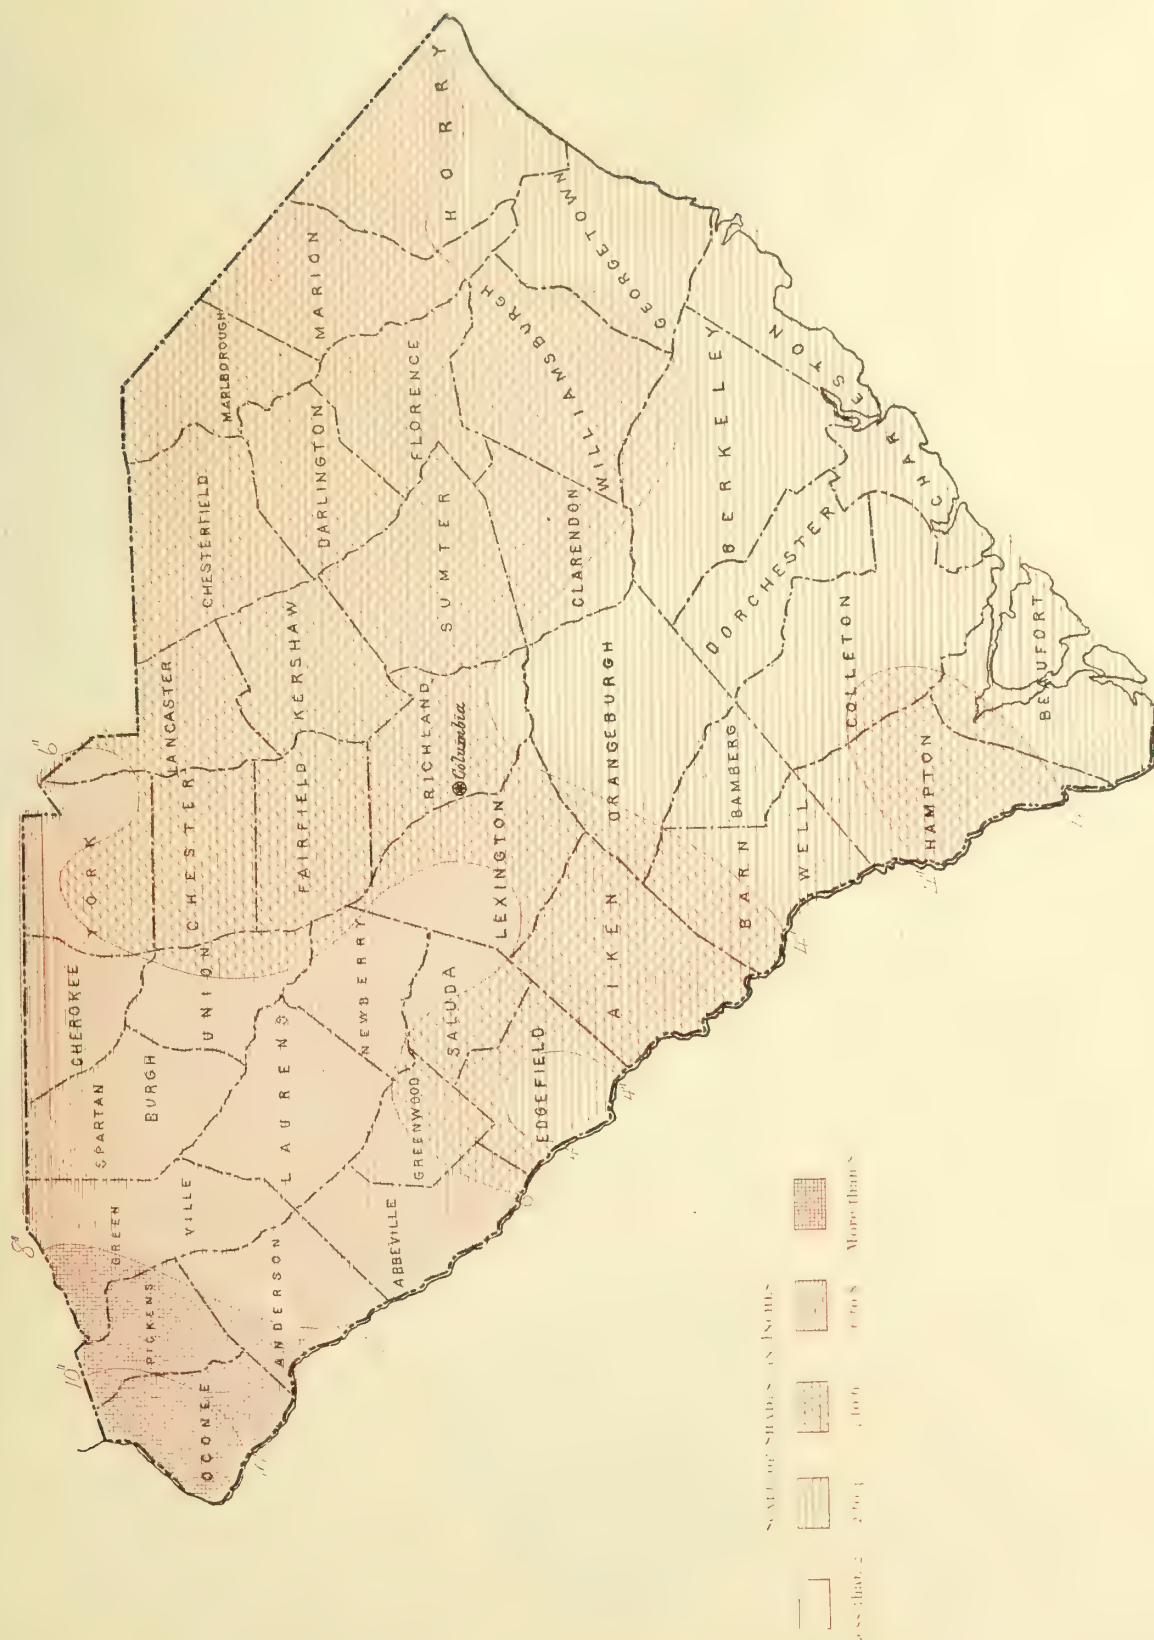

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING MARCH, 1906.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR MARCH, 1906.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, MARCH, 1906.

VOL. IX.

COLUMBIA, S. C., APRIL, 1906.

No. 4.

## GENERAL SUMMARY.

The mean temperature for the current April was above normal at all stations except at Seivern and at Trenton, and it was the second highest of record for the last thirteen years, the warmest April having been that of 1896 with a mean temperature of 66.9°. The coldest periods of the month were the first part of the first decade when frosts occurred generally over the State, and on the 24th when frosts were reported in the central and northern counties; heavy to killing frosts having been reported from several stations, and ice at Dillon. There were two unusually warm periods during the month; one during the first part of the second decade, and the other during the last half of the third decade.

There was a deficiency in precipitation over the entire State, ranging from 0.04 of an inch at Columbia to 4.50 inches at Gaffney. There were three distinct periods during which rain was recorded at practically every station, as follows: from the 8th to the 10th, from the 13th to the 16th, and from the 26th to the 30th, inclusive. Some localities had showers on the 1st, the 22nd and the 23rd. The heaviest rainfall occurred from the 26th to the 30th.

There were more clear days than usual, and fewer cloudy days.

## Temperature.

The mean temperature for April was 65.1°, which is 2.5° above normal. The highest local mean was 68.2° at Saint George, the lowest was 59.4° at Greenville. The extremes of temperature were a maximum of 93° at Bennettsville on the 29th and 30th, at Florence on the 30th, and at Heath Springs on the 29th, and a minimum of 28° at Seivern on the 24th, making the State range 65°. The greatest local monthly range was 62° at Seivern; the least was 42° at Charleston. The mean of the daily maximum temperatures was 78.2°, and of the daily minimum temperatures was 52.0°, making the average daily range 26.2°.

## Precipitation.

The average precipitation was 1.39 inches, which is 2.16 inches below normal. The greatest local monthly amount was 2.84 inches at Calhoun Falls; the least was 0.36 of an inch at Darlington. The greatest 24-hour fall was 1.54 inches at Clemson College on the 14th. The average number of days with 0.01 inch, or more, precipitation was 4, ranging from 1 at Florence to 8 at Newberry.

**HAIL.**—Hail was reported from the following stations: Batesburg 29th; Bennettsville, Cheraw 22nd; Clarks Hill 27th; Liberty 26th, 27th; Little Mountain 13th; Newberry and Pinopolis 26th.

## Wind.

The prevailing direction was from the southwest at 22 sta-

tions, from the west at 13 stations, from the south at 8 stations, from the north and the northwest at 3 stations each, and from the northeast and the east at 2 stations each.

**High Winds.**—Beaufort, Blackville, Charleston, Clarks Hill 6th; Bennettsville 27th; Bowman 5th, 6th, 14th; Cheraw 28th; Columbia, Winthrop College 14th; Liberty 5th, 6th, 25th; Little Mountain 25th; Newberry 14th, 23rd, 25th; Seivern 6th, 7th, 11th; Society Hill 5th, 14th, 23rd; Trial 23rd, 25th; Yorkville 6th, 14th, 23rd.

## Sunshine and Cloudiness.

The average number of clear days was 20, of partly cloudy days was 6, and of cloudy days was 4.

## BAROMETER AND WIND TABLE FOR APRIL, 1906.

## MISCELLANEOUS PHENOMENA.

**SOLAR HALOS.**—Solar halos were observed at Santuc on the 21st; at Winthrop College on the 20th.

**LUNAR HALOS.**—Lunar halos were observed at Charleston on the 4th, 7th, 8th; at Greenville on the 5th, 7th; at Stateburg on the 10th, and at Winthrop College on the 28th.

**DENSE FOGS.**—Fogs one hour, or longer, duration were observed as follows: at Bennettsville, Liberty, Santuc on the 10th; at Charleston, Stateburg, Trial on the 12th, 13th; at Columbia on the 13th, 30th; at Little Mountain, Newberry, Seivern on the 13th; at Summerville on the 12th, 14th; at Walterboro on the 11th, 12th, 13th; at Winthrop College on the 10th, 13th.

**FROSTS.**—Light frosts were noted at Batesburg, Bennettsville, Blackville, Clarks Hill, Dillon, Santuc, Society Hill, Yorkville on the 24th; at Beaufort, Bowman, Charleston, Trial on the 2nd, 3rd; at Columbia on the 2nd, 3rd, 24th; at Darlington, Little Mountain, Summerville on the 2nd, 24th; at Newberry on the 4th, 18th; at Seivern on the 18th; at Winthrop College on the 2nd, 7th. Heavy frost was noted at Bowman, Newberry, Winthrop College on the 24th. Killing frost was noted at Florence, Gaffney, Stateburg on the 24th; at Newberry on the 3rd; at Seivern on the 3rd, 24th.

**THUNDERSTORMS.**—There were 81 thunderstorms on 13 dates during April, distributed as follows: Aiken 28th; Barksdale, Beaufort, Charleston 14th, 29th; Batesburg 10th, 26th, 27th, 28th, 29th; Bennettsville, Cheraw 22nd; Blackville, Greenville 14th, 28th; Bowman 15th, 26th, 27th, 28th, 29th; Clarks Hill 27th; Columbia, Liberty 13th, 14th, 26th, 27th, 28th, 29th; Darlington 27th, 28th, 29th; Due West 28th, 29th; Little Mountain 9th, 13th, 14th, 26th, 27th; Newberry 9th, 14th, 26th, 27th, 29th, 30th; Pinopolis, Spartanburg 26th; Santuc 9th, 14th, 22nd, 26th, 27th; Seivern 14th, 27th, 28th, 30th; Stateburg 14th, 26th, 28th, 29th; Summerville 15th, 27th, 29th; Trenton 26th, 27th, 28th, 29th; Trial 26th, 27th; Winthrop College 22nd, 23rd, 27th; Yorkville 14th, 30th.

## OBSERVERS' REMARKS.

BARKSDALE.—The weather during April was favorable for farm work, but the soil was dry owing to the deficiency in precipitation.—J. T. Garrett. BATESBURG.—Neither the light frost on the 24th, nor the hail storm of the 29th did any material damage.—E. J. Hite. BEAUFORT.—The mean temperature was  $0.8^{\circ}$  above the April normal, and the precipitation was 0.77 of an inch below the normal amount. Fresh to brisk winds prevailed during the greater part of the time, which, together with much bright sunshine, quickly evaporated what rain had fallen.—Sidney M. Benton. BENNETTSVILLE.—The prevailing weather was dry and hot.—C. S. McCall. BOWMAN.—The month was unusually dry. Heavy frost formed on the morning of the 24th. The temperature and the sunshine were above normal.—B. O. Evans. DILLON.—The first "sweet-swamp" song bird was heard on the 11th. The first red-head bird was seen on the 15th. The first bat and bee-bird were seen on the 17th.—A. E. Rowell. HEATH SPRINGS.—The mean temperature was above the April normal, while the rainfall was below normal.—J. A. Weaner. LIBERTY.—The amount of rainfall was comparatively small, but it was well distributed throughout the month. Hail fell in considerable quantities on the 26th and the 27th.—Jno. T. Boggs. NEWBERRY.—An earthquake rumble was heard on the 18th but there was no accompanying jar. The frost on the 24th was not damaging.—W. G. Peterson. SANTUC.—The prevailing weather was fair during April, and the temperature was above the normal, with some short cool periods. The frost on the 24th was killing near streams.—E. W. Jeter. SOCIETY HILL.—The frost on the 2nd was very damaging. There was a harmful deficiency in precipitation.—Maj. J. J. Lucas. STATEBURG.—There was a frost on the 24th in low places but none formed on the hilltops. The deficiency in rainfall was considered favorable.—Dr. W. W. Anderson. SUMMERVILLE.—The frost on the 24th was slightly damaging. This was the warmest April in the last eight years.—Miss E. H. Gadsden. TRENTON.—The April precipitation was 2.56 inches below the normal amount, and is now 3.99 inches less than the average for the first four months of the year.—C. A. Long.

## APRIL WEATHER.

The April mean temperature shows an accelerated increase in warmth over March and sometimes, although rarely, the temperature rises to midsummer heat, as in 1896 when a maximum temperature of  $98^{\circ}$  was recorded at Gillisonville. This is the highest April maximum on record during the last thirteen years. The average increase in warmth from the beginning to the end of April is one degree for every three days, making the total increase about  $10^{\circ}$  for the whole month. Maximum temperatures of  $90^{\circ}$ , or higher, have been noted in ten of the last thirteen years. The maximum usually occurs in the eastern or southeastern portion of the State, although it has occurred two times in the northwestern portion, at Central in 1894 and at Spartanburg in 1901. The difference in temperature between the coast sections and the mountain re-

gions that is so marked a climatic feature of the State during the winter season, gradually decreases during this month and almost disappears during the summer season. The temperature has fallen below the freezing point in each of the last thirteen years, with an extreme minimum of  $21^{\circ}$  at Spartanburg in 1904. In all except two years the minimum has occurred in the extreme northwestern tier of counties, and the two exceptions were westward of the median line.

Light frosts are of frequent occurrence and no year has been free from frosts in April, although killing frosts rarely occur except in the mountain districts, as indicated by the region where the minimum temperature has usually occurred. The latest and most general killing frost of April occurred on the 17th in 1905 when tender vegetation was either seriously injured or totally destroyed in low places, to within about twenty miles of the coast. While this was the latest general killing frost of record, killing frosts occurred locally on the 24th of April in 1906. April frosts are a menace to the most tender vegetation only and only along streams or in other places that are very susceptible to frosts.

There are two general types of weather that cause precipitation in this State in April. Both are active during some years while during other years one or the other is practically absent, and again in other years both influences are faint, with the result that droughty conditions will prevail, and it is these influences that cause the wide differences in both the State averages and the local amounts that are such marked features of the April precipitation. The conditions, briefly stated, are first the passage of a general storm over or within close proximity to the State, second, when the pressure is slightly below normal and temperatures are abnormally high causing thunderstorms with usually heavy local rains, that are frequently in excess of three inches in 24 hours. It is when the larger part of the precipitation comes mainly from thunderstorms that the distribution is most uneven, but no part of the State is more likely than any other part to have the larger amounts, except that the rainfall is least along the immediate coast where the monthly amounts are almost without exception below the State average. Hail storms are common during thunderstorm periods that occur when abnormally high temperatures are closely followed by cool waves, which is frequently the case during April; but field crops are not far enough advanced to be materially injured by the hail.

The prevailing direction of the wind has been from the southwest in eight of the thirteen years, from the west in two years, and from the north, northeast and northwest in one year for each direction. East and southeast winds are infrequent and usually of short duration when they do occur.

There are usually more clear days than partly cloudy or wholly cloudy days. As a rule, April has the most pleasant weather of the year and it is not unlike the type of weather that prevails from the middle of May to the middle of June in the northern portions of the United States.

## ERRATA.

The following corrections should be made in the March Monthly report: On page 21 the mean temperature at Gaffney,  $46.1^{\circ}$ , should be  $46.2^{\circ}$ ; on pages 21 and 24 the total precipitation at Little Mountain, 6.52, should be 6.57; at Walterboro, 3.91 should be 3.89 inches.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

VOL. IX.

COLUMBIA, S. C., MAY, 1906.

No. 5.

## GENERAL SUMMARY.

The variations of the weather were much wider during the current May than is usual to the month, in respect to temperature, especially during the first half of the month, as both higher and lower temperatures were then noted than have been previously recorded. The maximum temperature on May 2nd, was the highest of record during a period of thirty-six years at Charleston, while on the 10th the lowest May temperatures ever recorded were noted at a number of stations, and the State record for minimum temperatures was lowered four degrees. Temperatures rose slowly from the 11th to the 18th and 19th, when the warmest weather of the month occurred over practically the entire State. Nearly normal temperatures prevailed from the 20th to the end of the month. The most noteworthy temperature feature was the occurrence of a light frost on the 10th, in exposed places, over the entire State.

Showers and thunderstorms were noted in all parts of the State from the 1st to the 6th, inclusive, while on the 7th and morning of the 8th a general rain occurred, with heavy amounts locally. No rain was noted at any station from the 9th to the 14th, inclusive, and only widely scattered very light showers occurred from the 15th to the 24th, inclusive. A period of rainy weather set in on the 25th and continued to the night of the 28th, while the last three days were without rain. The month's rainfall was unusually well distributed geographically, with the amounts ranging generally from 2 to 4 inches, except over comparatively small areas, where the amounts were either slightly less than two inches or slightly more than four inches.

There were more clear days than the combined number of partly cloudy days and cloudy days.

## Temperature.

The mean temperature for May was  $70.7^{\circ}$ , which is  $1.5^{\circ}$  below normal. The highest local mean was  $74.6^{\circ}$  at Kingstree, the lowest was  $64.3^{\circ}$  at Greenville. The monthly extremes of temperature were a maximum of  $99^{\circ}$  at Florence on the 19th, and a minimum of  $30^{\circ}$  at Seivern on the 10th, making the State range  $69^{\circ}$ . The greatest local monthly range was  $67^{\circ}$  at Seivern, the least was  $44^{\circ}$  at Saint George. The mean of the daily maximum temperatures was  $81.4^{\circ}$ , and of the daily minimum temperatures was  $60.0^{\circ}$ , making the average daily range  $21.4^{\circ}$ .

## Precipitation.

The average precipitation was 3.00 inches, which is 0.43 of an inch below normal. The greatest local monthly amount was 5.50 inches at Calhoun Falls, the least was 1.59 inches at

Bowman. The greatest 24-hour fall was 2.27 inches at Calhoun Falls on the 27th. The average number of days with 0.01 of an inch, or more, precipitation was 7, ranging from 4 at Barksdale, Clemson College, Due West, Edisto and Enoree to 12 at Walterboro.

EXCESSIVE PRECIPITATION.—At Calhoun Falls on the 27th 2.27 inches in 35 minutes; at Saint George on the 6th 1.45 inches in one hour.

HAIL.—Hail was noted at Anderson and Darlington on the 1st; at Barksdale and Liberty on the 27th; at Clarks Hill on the 7th; at Greenville on the 6th; and at Newberry on the 3rd.

## Wind.

The prevailing direction of the wind was from the southwest at 12 stations, from the west at 10 stations, from the east at 9 stations, from the south at 7 stations, from the north-east and the southeast at 4 stations each, from the northwest at 3 stations, and from the north at 1 station.

HIGH WINDS.—High winds occurred at Anderson and Winthrop College on the 1st; at Beaufort and Cheraw on the 22nd, 23rd, 24th; at Bowman and Summerville on the 21st, 22nd, 23rd, 24th, 25th; at Charleston on the 23rd; at Columbia and Liberty on the 6th; at Newberry on the 3rd, and at Yorkville on the 9th.

## Sunshine and Cloudiness.

The average number of clear days was 17, of partly cloudy days was 6, and of cloudy days was 8.

## MISCELLANEOUS PHENOMENA.

LUNAR HALOS.—Lunar halos were noted at Charleston on the 1st and 2nd; at Columbia and Winthrop College on the 1st; at Greenville on the 4th; at Santuc on the 2nd.

DENSE FOGS.—Dense fogs were noted at Charleston on the 18th; at Liberty and Yorkville on the 5th; at Columbia, Saluda, and Seivern on the 8th; and at Winthrop College on the 4th and 5th.

LIGHT FROSTS.—Light frosts were noted at Anderson, Batesburg, Beaufort, Bennettsville, Bowman, Charleston, Cheraw, Clarks Hill, Columbia, Dillon, Little Mountain, Newberry, Saluda, Santuc, Trenton, Winthrop College, Yorkville on the 10th; at Barksdale and Greenville on the 10th, 11th; at Seivern, Society Hill, and Spartanburg on the 9th.

THUNDERSTORMS.—Sixty-nine thunderstorms were reported during the month from twenty-two stations on thirteen dates, as follows: at Anderson on the 1st; at Barksdale on the 27th; at Batesburg on the 6th, 7th; at Beaufort on the 1st, 4th, 6th, 20th, 26th, 27th, 28th; at Bennettsville on the 7th, 27th; at Bowman on the 1st, 3rd, 6th, 28th; at Charleston on the 6th, 20th, 27th, 28th; at Clarks Hill, Saluda on the 7th; at Columbia, Santuc on the 1st, 3rd, 6th, 26th, 27th; at Darlington on the 1st, 3rd, 27th; at Greenville on the 6th; at Liberty on the 3rd, 6th, 26th, 27th; at Little Mountain on the 6th, 21st; at Newberry on the 3rd, 6th, 21st, 27th; at Seivern on the 2nd, 4th, 7th, 21st, 22nd, 27th, 28th; at Summerville on the 2nd, 7th, 21st, 22nd, 27th, 28th; at Trenton on the 1st, 3rd, 6th; at Trial on the 1st, 28th; at Winthrop College on the 6th, 7th, 19th; and at Yorkville on the 6th, 27th.

## ERRATA.

The following corrections should be made in the April, 1906, number of the Monthly Reports: On page 30, the mean minimum temperature at Little Mountain, 63.1, should be 53.1; on pages 29 and 32, the total precipitation at Darlington, 0.36, should be 0.37; at Dillon, 1.39, should be 1.34; at Gaffney, 1.35, should be 1.33.

## OBSERVERS' REMARKS.

BARKSDALE.—There was a heavy and somewhat damaging hail storm on the 27th.—J. T. Garrett. BATESBURG.—The frost on the 10th was very light. Thunderstorms occurred on two days.—E. J. Hite. BEAUFORT.—The minimum temperature on the 10th, at this place, was the lowest temperature recorded during the month of May since the establishment of this station. A severe wind and rain storm prevailed from the 22nd to the 24th, inclusive.—Sidney M. Benton. BENNETTSVILLE.—The weather generally was clear and pleasant after the 7th. Each of the two heavy rainfalls was followed by very low temperature that lasted several days.—C. S. McCall. LIBERTY.—The weather was generally favorable during the month, but the lack of rain caused the soil to become very dry up to the 25th when a period of copious rainfall began.—Jno. T. Boggs. NEWBERRY.—A heavy storm visited this station on the 3rd with 1.15 inches of rainfall in one hour. The frost on the 10th was light, but nipped very tender vegetation.—W. G. Peterson. SANTUC.—There was some very cool weather for this month, with frost on the 10th, that would have caused serious damage except that a fresh wind prevailed, which nipped very tender vegetation.—E. W. Jeter. SOCIETY HILL.—A light frost on the 9th did no serious damage. Both the rainfall and the temperature were below normal during the month.—Maj. J. J. Lucas. SUMMERVILLE.—Although the temperature was low enough for light frost on the 10th, none was observed.—Miss E. H. Gadsden. TRENTON.—The precipitation for the month was below the normal, and it is now 3.67 inches less than the average for the first five months of the year.—C. A. Long. YORKVILLE.—The frost on the 10th was confined to exposed localities.—J. R. Schorb.

## MAY WEATHER.

May is a transition month when spring merges gently into summer. The daily march of temperature during the first half of May is at about the same rate of increase in warmth as during the preceding month, but the rate decreases gradually and during the second half is much slower, especially during the third decade when the rate falls to about one degree for every five days. The average increase in heat, as shown by the daily normal temperatures, from the first to the last day is nearly one degree for every three and one-half days, making the total increase about 9°. The monthly maximum temperatures usually occur during the last ten days, although not invariably so, as in 1901 the maximum occurred on the 3rd and in 1902 it occurred on the 4th. The State maximum temperature has been above 95° in every year since records have become available, and in seven out of the fourteen years of record they have been above 100° with an extreme maximum of 106° at Gillisonville on the 30th, in 1898. This is as high a temperature as has been recorded in either August or September, and is within one degree of being as high as the highest in July, and is one degree higher than has been recorded in June. May cannot be classed as a summer month notwithstanding the annual occurrence of periods of intense heat, for there are, in nearly every year, periods of decidedly cool weather, but it is rarely cold enough for the formation of frost or ice, although in 1906 a minimum temperature of 30° was noted at Seivern and one of 32° at Greenville, while light frost was noted in exposed places from the mountains to the coast. The previous minimum temperature during the last fourteen years was 34°. In the two years noted above when the maximum occurred on the

3rd and 4th, respectively, the minimum in each year occurred on the 28th, but this was an anomaly, as the lowest temperatures usually occur during the first half of the month.

The precipitation is quite variable in respect to both its geographical distribution and average amounts from year to year, owing largely to the nature of the storms from which the May rains fall. It is a month of considerable thunderstorm frequency, ranking fourth in that respect and being outranked by the three following months only. It ranks second to June in the average number of hailstorms. Excessive rains of over three inches in twenty-four hours have occurred in six of the fourteen years with a maximum 24-hour fall of 6.25 inches at Winnsboro in 1901. Local droughts, or droughty conditions, occurred in most of the years, but a general drought has not been known since records began.

The prevailing winds in May are from the southwest, and there are nearly as many clear days, on an average, as there are both partly cloudy and cloudy days. All varieties of trees are in full leafage, and all vegetation wears its deepest green during this month.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard.  
 § Exposed not standard. \* On other dates also a indicates 1 day missing. b, 2 days, etc.

## CLIMATOLOGICAL REPORT: SOUTH CAROLINA SECTION.

MAY, 1906.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING MAY, 1906.

At those stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR MAY, 1906

## DAILY PRECIPITATION FOR SOUTH CAROLINA, MAY, 1906.

VOL. IX.

COLUMBIA, S. C., JUNE, 1906.

No. 6.

## GENERAL SUMMARY.

There were two periods of abnormal heat during the current June, when maximum temperatures of 100° or above, were recorded at one or more stations. The first period was of comparatively short duration and included the 7th, 8th, and 9th; the second period began on the 21st and lasted to the end of the month. No unusually low temperatures occurred.

With the exception of slight deficiencies at Anderson, Clemson College, and Greenville in the extreme western part of the State, and at Charleston on the coast, the precipitation was in excess of the normal at all stations. At a number of stations from two to nearly three times the normal amount was recorded. The heaviest rainfall occurred over the eastern part of the State, and from the 12th to the 18th, inclusive. Moderately heavy and quite general rains occurred from the 2nd to the 6th, inclusive, and from the 24th to the 26th, inclusive. Widely scattered and generally light showers occurred on the 8th, 9th, 10th, 11th, 20th, 27th, 28th, 29th, and 30th. The average rainfall for the State was the largest of record for the last thirteen years, as is shown in the table under "June Weather."

There was an unusually large number of thunderstorms, and many of them were accompanied by hail and local high winds. There was less than the normal percentage of sunshine.

## Temperature.

The mean temperature for June was 78.4°, which is 0.5° above normal. The highest local mean was 82.2° at Saint George, the lowest was 72.4° at Greenville. The monthly extremes of temperature were a maximum of 102° at Blackville on the 28th and 29th, and at Florence on the 8th, and a minimum of 52° at Greenville on the 13th, making the State range 50°. The greatest local monthly range was 45° at Heath Spring, the least was 26° at Charleston. The mean of the daily maximum temperatures was 88.5°, and of the daily minimum temperatures was 68.2°, making the average daily range 20.3°.

## Precipitation.

The average precipitation was 8.88 inches, which is 4.02 inches above normal. The greatest local monthly amount was 16.13 inches at Smiths Mill, the least was 4.28 inches at Greenville. The greatest 24-hour fall was 7.15 inches at Allendale on the 13th. The average number of days with rain was 12, ranging from 6 at Calhoun Falls to 17 at Summerville.

**EXCESSIVE PRECIPITATION.**—At Aiken on the 11th, 3.90 inches in 24 hours; at Allendale on the 13th, 7.15 inches in 8 hours; at Beaufort on the 16th, 3.00 inches in 24 hours; at Bennettsville on the 15th, 2.48 inches in 24 hours; at Black-

ville on the 13th, 4.93 inches in 9 hours; at Calhoun Falls on the 13th, 3.82 inches in 21 hours; at Chappels on the 13th, 2.50 inches in 24 hours; at Cheraw on the 16th, 3.85 inches in 24 hours, and on the 18th, 2.73 inches in 24 hours; at Clarks Hill on the 12th-13th, 4.21 inches in 24 hours; at Columbia on the 5th, 1.06 inches in 20 minutes, and on the 15th, 1.23 inches in 55 minutes; at Darlington on the 13th, 2.95 inches in 24 hours; at Dillon on the 13th, 2.77 inches in 24 hours; at Edisto on the 16th, 2.94 inches in 24 hours; at Effingham on the 13th-14th, 3.50 inches in 24 hours; at Florence on the 16th, 2.80 inches in 24 hours; at Georgetown on the 16th, 3.50 inches in 24 hours; At Pinopolis on the 14th, 5.07 inches in 24 hours; at Saint Matthews on the 16th, 4.50 inches in 7 hours, and on the 25th-26th, 4.70 inches in 13 hours; at Saint Stephens on the 15th-16th, 5.29 inches in 19 hours; at Seivern on the 13th, 3.16 inches in 24 hours; at Smiths Mill on the 14th, 3.90 inches in 24 hours; at Society Hill on the 14th-15th, 3.93 inches in 24 hours; at Sumter on the 15th, 4.30 inches in 24 hours; at Walterboro on the 13th, 3.33 inches in 24 hours, and on the 26th, 3.25 inches in 24 hours; at Rock Hill on the 9th, 3.00 inches in 1 hour and 45 minutes; at Yorkville on the 13th, 3.30 inches in 24 hours, and on the 15th, 3.30 inches in 2 hours and 30 minutes, and on the 16th, 2.60 inches in 24 hours.

**HAIL.**—At Newberry on the 29th; at Summerville on the 28th; at Winthrop College on the 8th.

## Wind.

The prevailing direction of the wind was from the southwest at 25 stations, from the west at 11 stations, from the south at 9 stations, from the east and the northwest at 2 stations each, and from the north and the northeast at 1 station each.

**HIGH WINDS.**—At Blackville on the 3rd; at Bowman on the 12th; at Charleston on the 12th; at Greenville on the 24th; at Liberty on the 6th, 7th, 13th, 26th; at Spartanburg on the 9th; at Stateburg on the 19th; at Trial on the 12th, 24th; at Winthrop College on the 9th, 24th.

## Sunshine and Cloudiness.

The average number of clear days was 13, of partly cloudy days was 8, and of cloudy days was 9.

## MISCELLANEOUS PHENOMENA.

**LUNAR HALOS.**—At Charleston on the 3rd, 28th; at Winthrop College on the 1st, 6th.

**DENSE FOGS.**—At Liberty on the 2nd, 17th; at Winthrop College on the 15th.

**THUNDERSTORMS.**—Two hundred and one thunderstorms were reported from twenty-two stations on twenty-nine dates, as follows: At Batesburg on the 2nd, 3rd, 24th, 25th; at Beaufort on the 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, 12th, 13th, 14th, 15th, 16th, 19th, 22nd, 23rd, 25th, 26th, 27th, 28th, 29th; at Bennettsville on the 8th, 9th, 15th, 17th, 18th, 24th; at Blackville on the 3rd, 6th, 8th, 13th, 14th, 15th, 16th, 26th; at Bowman on the 2nd, 3rd, 4th, 5th, 14th, 15th, 16th, 25th, 26th, 30th; at Charleston on the 6th, 7th, 14th, 19th, 23rd, 25th, 26th, 27th, 28th, 29th, 30th; at Cheraw on the 2nd, 5th, 8th, 13th, 15th, 16th, 17th, 18th, 24th, 25th, 30th; at Columbia on the 2nd, 3rd, 4th, 5th, 8th, 9th, 13th, 14th, 15th, 19th, 24th, 25th; at Due West on the 9th, 16th, 24th; at Greenville on the 4th, 10th, 24th; at Heath Spring on the 24th, 25th; at Liberty on the 3rd, 4th, 5th, 8th, 9th, 10th, 11th, 15th, 16th, 23rd, 24th, 25th, 29th, 30th; at Newberry on the 2nd, 3rd, 9th, 12th, 13th, 14th, 15th, 16th, 24th, 25th, 29th, 30th; at Santuc on the 2nd, 3rd,

4th, 9th, 15th, 16th, 23rd, 25th, 30th; at Seivern on the 2nd, 3rd, 4th, 6th, 9th, 14th, 16th, 20th, 22nd, 25th, 26th, 29th, 30th; at Spartanburg on the 9th; at Stateburg on the 1st, 2nd, 3rd, 4th, 5th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 24th, 25th, 26th, 30th; at Summerville on the 3rd, 6th, 8th, 12th, 13th, 14th, 15th, 16th, 17th, 19th, 25th, 26th, 17th, 28th, 29th; at Trenton on the 2nd, 3rd, 4th, 8th, 13th, 14th, 15th, 16th, 19th, 21st, 23rd, 24th, 25th, 30th; at Trial on the 3rd, 13th, 14th, 24th, 25th, 28th, 30th; at Winthrop College on the 9th, 22nd, 24th, 25th, 26th; at Yorkville on the 2nd, 16th, 25th.

## OBSERVERS' REMARKS.

BATESBURG.—The weather was generally favorable during the month, except that excessive rainfall from the 12th to the 17th, inclusive, did slight damage.—E. J. Hite. BEAUFORT.—The accumulated excess in temperature since January 1st is 7°, and the accumulated excess in precipitation for the same period is 6.63 inches. Over six inches of rain fell during the week ending June 16th.—Sidney M. Benton. BENNETTSVILLE.—The month was characterized by excessive rainfall, and by high day temperatures and cool nights.—C. S. McCall. BOWMAN.—The month was notable for the large number of heavy thunderstorms that occurred, some of them accompanied by washing rains. The maximum temperatures were unusually high.—B. O. Evans. CLARKS HILL.—The rainfall on the 12th-13th, 4.21 inches in 24 hours, was the heaviest of record at this station.—Wm. S. Middleton. LIBERTY.—Plenty of rain, well distributed throughout the month, amply supplied the soil with moisture.—Jno. T. Boggs. SANTUC.—This month was unusually wet, and had more than the usual amount of cloudiness; there were frequent heavy thunderstorms, some accompanied by washing rains.—E. W. Jeter. STATEBURG.—The precipitation was excessive and all of it was due to the occurrence of thunderstorms. Some of the thunderstorms were accompanied by heavy rainfall and high winds of short duration while others bore the characteristics of tropical storms.—W. W. Anderson, M. D. SUMMERVILLE.—From the 10th to the 17th, inclusive, 6.88 inches of rain fell, mostly in the form of showers, accompanied by high winds.—Miss E. H. Gadsden. TRENTON.—The accumulated precipitation is 1.88 inches more than the average for the first six months of the year, there having been a harmful excess during this month.—C. A. Long. YORKVILLE.—There were frequent thunderstorms; some were near by and others were far off.—J. R. Schorb.

## JUNE WEATHER.

The mean daily temperature increases regularly during June, from the first to the last day, at the rate of one degree for every ten days, from a normal of 77° on the first to 80° on the last. This month does not maintain the same evenness of temperature as July and August do, as the records indicate wide fluctuations, especially in the minimum temperatures, although the mean of the daily minimum temperatures show smaller differences from year to year than the means of the daily maximum temperatures show. The ratio of the latter is in direct proportion to the percentage of sunshine which in turn varies widely from year to year.

The precipitation was copious in some parts of the State in every one of the last thirteen years, and it was scant in some sections in all but four years, indicating an irregular geographical distribution, but a study of the rainfall charts for the different years does not indicate that any particular division has been more favored than others in the average amount

of rainfall. Heavy local rains are of almost annual occurrence, as in ten of the last thirteen years falls of more than 4 inches in 24 hours have been noted. June is the month of greatest hailstorm frequency but records of hailstorms are so incomplete that a more accurate record might show a different result. The record of wind direction, reduced to percentages, shows that the prevailing direction is from the southwest, and that it blows from that direction during about one-fourth the time.

The total number of clear days in the last thirteen years was 153, of partly cloudy days was 140, of cloudy days was 97, and of rainy days was 131.

## HAILSTORMS IN JUNE.

Through the courtesy of hailstorm insurance companies their reports of the occurrence of hailstorms in South Carolina during the current June are given herewith. The summary of such storms grouped under the dates of occurrence represents all reports received after the elimination of obvious duplications of reports and counting only one storm where two reports were credited to the same vicinity but in slightly different localities. The main object intended is to show the geographical distribution rather than the largest number of hailstorms on any one date. One company reported the character of the hailstorms and classified them as light 10, severe 21, very serious, 1. This classification was based, no doubt, on the amount of damage done to crops, as no description of the hailstones themselves was supplied. The total number of hailstorms reported was 70, and they occurred on 21 dates, as follows: On the 2nd at Kemper; on the 4th at Lykesland; on the 5th at Society Hill; on the 6th at Hampton, Fork, Kemper; on the 7th at Zion; on the 8th at Kemper, Congaree, Fork, Chester, Bishopville; on the 11th at Fork, Mullins; on the 13th at Gallivants Ferry, Gideon, Exile, Justice, Mullins; on the 14th at Gallivants Ferry, Loris, Finklea; on the 15th at Lancaster, Anderson, Darlington, Society Hill, Ousley's; on the 16th at Timmons ville, St. Charles; on the 17th at Lancaster, Middendorf; on the 18th at Lancaster, Dillon, Blenheim; on the 20th at Mullins, Mont Clare, Darlington, Timmons ville, Lamar, McBee, Gideon, Exile, Latta; on the 21st at Lancaster; on the 22nd at Mullins; on the 23rd at McConnellsville, Kemper, Laurens, Manning; on the 24th at Mont Clare, Timmons ville, Darlington, Dovesville, Workman, Hymen, Cades, Tatum, Finklea, Bennettsville, Palmetto; on the 25th at Lancaster, Kershaw, Clio, Chester, McBee, Hartsville, Lykesland, Timmons ville; on the 28th at Lake City; on the 30th at Wysacky.

VOL. IX.

COLUMBIA, S. C., JULY, 1906.

No. 7.

## GENERAL SUMMARY.

The weather during the present month most nearly resembled July in 1894 in respect to temperature, rainfall, and cloudiness. The average temperature was somewhat higher than in 1894, but it was the second lowest of record during a period of thirteen years. The same is true of the mean of the daily maximum temperatures, while the mean of the daily minimum temperatures was the third lowest of record, it having been lower in 1894 and in 1904. The highest maximum temperature was the same as in 1894 and with that exception was the lowest of record. The daily mean temperature rarely rose above the normal, making the month pleasant and favorable in respect to heat.

The precipitation was excessive over nearly the entire State; the exceptions were small, widely separated areas, represented by four rainfall stations, where the monthly amounts were slightly below normal. The State average precipitation is the largest of record, and exceeded the previous largest amount, that of 1894, by 0.16 of an inch, while the greatest local amount exceeded the previous July record by 0.46 of an inch. The average number of days with rain was the same as in 1894. Rain fell in some portion of the State on every day of the month, and the ground did not become dry enough to be dusty throughout the entire month. The effect of these continuous rains was scarcely noticeable in the flow of the larger rivers, but smaller watercourses overflowed their banks in sections where the rainfall was excessive during 24-hour periods.

Thunderstorms were more numerous than in the preceding June, but there were fewer hailstorms, although some of the July hailstorms were more damaging than any that occurred in June.

The average number of clear days was the smallest of record. The previous smallest average number of clear days was 8 in 1894. Cloudiness was greatest during the middle portions of the day, the afternoons, and during the early parts of the night, while the middle parts of the nights and the early mornings were generally clear.

## Temperature.

The mean temperature for July, 1906, was  $78.4^{\circ}$ , which is  $1.3^{\circ}$  below normal. The highest local mean was  $82.3^{\circ}$  at Aiken, the lowest was  $72.8^{\circ}$  at Greenville. The monthly extremes of temperature were a maximum of  $100^{\circ}$  at Yorkville on the 1st, and a minimum of  $56^{\circ}$  at Trenton on the 13th, making the State range  $44^{\circ}$ . The greatest local monthly range was  $38^{\circ}$  at Trenton and Walhalla, the least was  $23^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $87.4^{\circ}$ , and of the daily minimum temperatures was  $69.5^{\circ}$ , making the average daily range  $17.9^{\circ}$ .

## Precipitation.

The average precipitation was 8.40 inches, which is 2.71 inches above normal. The greatest local monthly amount was 17.77 inches at Clemson College, the least was 4.01 inches at Little Mountain. The greatest 24-hour fall was 3.90 inches at Aiken on the 27th. The average number of days with .01, or more, of rain was 16, ranging from 7 at Chappells to 21 at Liberty, Saluda, and Summerville.

EXCESSIVE PRECIPITATION.—At Aiken on the 27th, 3.90 inches in 24 hours; at Batesburg on the 26th, 1.06 inches in 25 minutes; at Beaufort on the 14th, 2.27 inches in 2 hours; at Blackville on the 31st, 2.73 inches in 24 hours; at Blairs on the 30th, 1.60 inches in 1 hour; at Catawba on the 19th, 1.90 inches in 1 hour and 30 minutes; at Charleston on the 14th-15th, 3.75 inches in 24 hours; at Clemson College on the 14th, 3.06 inches in 24 hours; at Columbia on the 1st, 1.07 inches in 1 hour; at Due West on the 3rd, 2.95 inches in 24 hours; at Kingstree on the 2nd, 2.60 inches in 12 hours; at Liberty on the 15th, 3.35 inches in 3 hours; at St. Matthews on the 16th, 1.90 inches in 1 hour; at Smiths Mills on the 4th, 1.00 inch in 1 hour, and on the 6th, 1.90 inches in 2 hours, and on the 16th, 1.00 in one hour; at Stateburg on the 2nd, 1.13 inches in 45 minutes; at Trenton on the 30th, 3.10 inches in 24 hours; at Walhalla on the 14th, 3.20 inches in 24 hours.

## Wind.

The prevailing direction of the wind was from the south and the southwest at 16 stations each, from the east at 6 stations, from the northeast and the west at 5 stations each, and from the north and the southeast at 1 station each.

## Sunshine and Cloudiness.

The average number of clear days was 5, of partly cloudy days was 17, and of cloudy days was 9.

## MISCELLANEOUS PHENOMENA.

PARHELIA.—At Santuc on the 20th.

SOLAR HALOS.—At Charleston on the 10th, 16th; at Santuc on the 10th, 11th.

LUNAR HALOS.—At Charleston on the 4th, 31st; at Saluda on the 27th, at Stateburg on the 4th; at Winthrop College on the 1st.

DENSE FOGS.—At Blackville and Little Mountain on the 24th; at Columbia on the 26th, 27th; at Liberty on the 9th, 16th, 22nd, 26th; at Seivern on the 27th; at Society Hill on the 5th, 27th; at Stateburg on the 26th, 28th.

THUNDERSTORMS.—Two hundred and fifteen thunderstorms were reported from twenty-two stations on twenty-nine dates, as follows: At Beaufort on the 2, 3, 4, 5, 6, 7, 8, 14, 15, 16, 22, 23, 24, 25, 29, 30, 31; at Bennettsville on the 2, 17, 22; at Blackville on the 1, 2, 3, 5, 8, 12, 18, 22, 23, 24, 25, 26, 29, 31; at Bowman on the 2, 3, 4, 5, 6, 8, 9, 14, 15, 16, 17, 18, 23, 24, 25, 27, 29, 30; at Charleston on the 3, 4, 5, 6, 8, 9, 14, 15, 22, 23, 24, 25, 28, 29, 30, 31; at Cheraw on the 1, 2, 3, 4, 5, 18, 19, 20, 22; at Columbia on the 1, 3, 4, 5, 11, 16, 17, 18, 22, 25, 27, 28, 29, 30, 31; at Due West on the 3, 8, 9, 12, 16, 19; at Kingstree on the 25; at Liberty on the 3, 8, 15, 16, 17, 19, 21, 22, 23, 25, 26, 27, 29, 30, 31; at Newberry on the 1, 4, 11, 16, 17, 20, 25, 29; at Rimini on the 2, 5; at Saluda on the 1, 2, 4, 8, 11, 14, 18, 22, 25, 28, 30; at Santuc on the 2, 5, 11, 16, 17, 18, 19, 20, 22, 25, 29, 31; at Seivern on the 1, 2, 4, 5, 6, 15, 17, 18, 19, 23, 26, 30; at Society Hill on the 2, 3, 4, 8, 11, 19, 22, 23; at Stateburg on the 1, 2, 4, 17, 18, 19, 22, 29; at Summerville on the 3, 4, 5, 6, 8, 15, 18, 23, 25, 28, 29, 31; at

Trenton on the 1, 3, 4, 5, 6, 15, 17, 18, 19, 22, 24, 27, 29, 30, 31; at Trial on the 3, 4, 5, 15, 16, 17, 18, 23, 25, 28, 29, 30, 31; at Winthrop College on the 2, 18, 22, 25, 27, 29; at Yorkville on the 21, 22, 31.

## OBSERVERS' REMARKS.

BEAUFORT.—The accumulated deficiency in temperature since January 1st is 61°, and the accumulated excess in precipitation since January 1st is 9.78 inches.—Sidney M. Benton. BATESBURG.—The rainfall was excessive and damaging. There were no high winds and only a few moderate thunderstorms.—E. J. Hite. BENNETTSVILLE.—The weather throughout the whole month was humid and cool, with too much rainfall. Sunshine was deficient.—C. S. McCall. BOWMAN.—The month was noteworthy for the large number of partly cloudy days, there having been twenty-one such, and only six clear days.—B. O. Evans. HEATH SPRINGS.—Generally cloudy weather prevailed throughout the month, with rain on sixteen days. The temperature range was nearly normal.—J. A. Weaner. LIBERTY.—The month was very wet. High winds and overflows of streams did much damage.—John T. Boggs. SANTUC.—There was only one clear day in the month, while rain fell on nearly half the days. There were no high winds, and only few and light thunderstorms.—E. W. Jeter. STATEBURG.—The month was remarkable for the smallest number of clear days ever observed at this station during any month, only one clear day having been noted, and it also had the largest number of cloudy days and days with rain of record.—W. W. Anderson, M. D. SUMMERVILLE.—More than the July normal precipitation fell during the first half of the month.—Miss E. H. Gadsden. TRENTON.—The accumulated precipitation since January 1st is 10.21 inches in excess of the normal amount. The excessive rainfall for the month was very damaging.—C. A. Long. YORKVILLE.—Many thunderstorms occurred within hearing of the station, in every direction, while only three passed over the station.—J. R. Schrob.

## HAILSTORMS IN JULY.

Hailstorm insurance companies and cooperative observers reported comparatively few hailstorms during July, compared with the number in June, although thunderstorms were more numerous this month. Several of the July hailstorms were unusually destructive, especially one that occurred on the 27th in Greenwood county, near the village of Epworth, where over a considerable area all field crops were destroyed, and many renters made destitute so that State aid was solicited for their relief. Another very severe and damaging hailstorm occurred in Darlington county, in the vicinity of Hartsville, on the 11th, and on the same day in the vicinity of Society Hill; and a very severe hailstorm was reported on the 25th from the town of Kershaw, Lancaster county. As in June, no description of the character of the hailstones was given, but the severity of the storms was expressed in terms indicating the amount of damage wrought. Reports were not received from one insurance company that rendered a report in June, which, had they been received, might have increased the total number of storms somewhat. Only nine hailstorms were reported for July, on five dates, as follows: on the 1st at Hartsville and Darlington; on the 11th at Hartsville and Society Hill; on the 17th at Spartanburg; on the 25th at Lugoff, Kershaw, and Congaree (newspaper dispatches reported hail on this date in Kershaw, Lee, and Sumter counties also); on the 27th at Epworth.

## BAROMETER AND WIND TABLE FOR JULY, 1906.

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., AUGUST, 1906. No. 8.

**GENERAL SUMMARY.**

The weather during the present month was not materially different from the usual August weather, except that the temperature was slightly higher and more equable than usual. There was no excessive heat, and the highest maximum temperature has been exceeded in every year since 1894, except in 1898 and 1901, and the State minimum temperature has been lower in every year except in 1900 and in 1903 when it was the same. The warmest part of the month was from the 7th to the 12th, inclusive, while the coolest parts were on the 1st and 2nd, and from the 21st to the 23rd, inclusive. The range of the minimum temperature at the different stations was unusually small; the greatest range in the minimum temperatures at any station was 15° at Trenton, while the least range was only 4° at Bennettsville and at Greenville, and the average range was only 7°, causing a remarkable uniformity in the night temperatures. It is also noteworthy that the minimum temperatures differed but little over all parts of the State, although the extreme western portion had somewhat lower minimum temperatures than the central and eastern portions. The range of the daily maximum temperatures was also smaller than usual at nearly every station, and they averaged nearly as high in the western portion of the State as in the central and eastern portions. The mean temperature for the State was equal to the third highest August mean of record; the years 1899 and 1900 were warmer, and 1903 had the same mean temperature.

The precipitation was not unusually heavy, although the average number of days with rain has been greater only in 1898, and was the same in 1901, both of which years had nearly a half more rainfall than the current August. There were frequent showers in all parts of the State from the 1st to the 4th, inclusive, after which there was very little rain until the 10th, but from that date to the end of the month there were daily showers in some part of the State. The rainfall was quite well distributed, although there were three comparatively small areas with excessive precipitation; the most northerly area comprised Cherokee, Spartanburg, and York counties; the most southerly area included parts of Aiken, Lexington, Barnwell, and Orangeburg counties, while the third and smallest area included the eastern part of Chesterfield and the western part of Marlboro counties. The State average rainfall has been greater in six years, and has been less in six years, since 1894. More thunderstorms were noted this month than in either June or July, but there were fewer hailstorms and high winds in connection with the thunderstorms.

The average number of clear days was equal to the smallest number of record, and was the same as in the year 1901, while the average number of partly cloudy days was the

second largest of record, there having been four more in 1900; the number of cloudy days was about equal to the August average.

**Temperature.**

The mean temperature for August, 1906, was 80.6°, which is 1.2° above normal. The highest local mean was 83.5° at Aiken, the lowest was 75.4° at Greenville. The monthly extremes of temperature were a maximum of 100° at Walhalla on the 7th and at Blackman and Bowman on the 10th, and a minimum of 60° at Trenton on the 1st, making the State range 40°. The greatest local monthly range was 36° at Trenton and Walhalla, the least was 20° at Georgetown. The mean of the daily maximum temperatures was 89.3°, and of the daily minimum temperatures was 71.9°, making the average daily range 17.4°.

**Precipitation.**

The average precipitation was 6.62 inches, which is 0.63 of an inch above normal. The greatest local monthly amount was 12.45 inches at Spartanburg, the least was 2.00 inches at Allendale. The greatest 24-hour fall was 5.19 inches at Bowman on the 26th-27th. The average number of days with .01 of inch, or more, of rain was 15, ranging from 5 at Allendale to 23 at Cheraw.

**EXCESSIVE PRECIPITATION.**—At Batesburg on the 1st, 3.53 inches in 2 hours; at Blackville on the 7th, 3.00 inches in 2 hours and 35 minutes, and on the 23rd, 3.25 inches in 1 hour and 30 minutes; at Blairs on the 2nd, 2.66 inches in about 12 hours; at Bowman on the 26th-27th, 5.19 inches in about 8 hours; at Charleston on the 2nd, 3.41 inches in 24 hours; at Cheraw (1) on the 27th, 1.45 inches in 1 hour, and at Cheraw (2) on the 27th, 1.84 inches in 40 minutes; at Clarks Hill on the 14th, 3.43 inches in about 12 hours; at Columbia on the 12th, 1.85 inches in 1 hour; at Georgetown on the 2nd, 2.65 inches in 24 hours; at Greenwood on the 23rd, 2.10 inches in about 1 hour; at Newberry on the 28th-29th, 2.64 inches in 24 hours; at Santuc on the 28th-29th, 2.77 inches in 24 hours; at Seivern on the 1st, 2.86 inches in 24 hours, and on the 13th, 4.08 inches in 24 hours; at Smiths Mills on the 19th, 2.10 inches in 1 hour and 30 minutes; at Spartanburg on the 10th, 2.10 inches in 1 hour, and on the 30th, 3.00 inches in 1 hour and 30 minutes, and on the 30th, 5.15 inches in 24 hours; at Stateburg on the 22nd, 2.68 inches in 24 hours; at Trenton on the 1st, 3.71 inches in 24 hours; at Walterboro on the 26th, 1.12 inches in 1 hour.

**Wind.**

The prevailing direction of the wind was from the southwest at 19 stations, from the south at 17 stations, from the west at 6 stations, from the southeast at 5 stations, from the northeast at 3 stations, and from the north at 1 station.

**Sunshine and Cloudiness.**

The average number of clear days was 7, of partly cloudy days was 17, and of cloudy days was 7.

**MISCELLANEOUS PHENOMENA.**

**PARHELIA.**—At Santuc on the 6th.

**LUNAR HALOS.**—At Charleston on the 1st, 3rd.

**SOLAR HALOS.**—At Charleston on the 6th; at Stateburg on the 23rd.

**DENSE FOGS.**—Dense fogs of one hour, or longer duration were recorded as follows: At Blackville on the 20th, 33rd, 25th; at Camden on the 4th, 15th, 22nd; at Columbia on the

4th, 27th; at Heath Springs on the 16th, 18th, 20th, 22nd, 23rd, 24th, 25th, 26th; at Liberty on the 6th; at Newberry on the 22nd, 23rd; at Saluda on the 2nd, 3rd, 4th, 5th, 17th, 18th, 19th, 23rd; at Santuc on the 20th, 22nd, 23rd, 24th, 31st; at Seivern on the 18th, 19th, 20th, 21st, 22nd; at Society Hill on the 3rd, 4th, 17th, 18th; at Stateburg on the 26th; at Winthrop College on the 22nd, 24th, 25th, 31st; at Yorkville on the 2nd, 22nd, 24th, 25th, 31st.

**THUNDERSTORMS.**—Two hundred and forty-one thunderstorms were reported from twenty-one stations on thirty dates, as follows: Beaufort, 1, 2, 9, 10, 11, 15, 16, 18, 20, 21, 23, 24, 25, 26, 27, 28, 29, 31; Batesburg, 2, 18, 23, 27; Blackville, 4, 5, 7, 9, 17, 22, 23; Bowman, 4, 7, 12, 13, 14, 15, 16, 17, 23, 31; Charleston, 1, 2, 4, 9, 10, 15, 16, 17, 18, 19, 20, 21, 23, 24, 25, 26, 27, 31; Columbia, 6, 7, 11, 12, 14, 15, 16, 17, 19, 20, 21, 22, 23, 24, 25, 27, 31; Georgetown, 3; Liberty, 1, 4, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31; Newberry, 1, 4, 12, 13, 15, 16, 17, 18, 19, 20, 21, 22, 28, 29, 30; Saluda, 1, 2, 13, 14, 16, 17, 18, 19, 20, 30, 31; Santuc, 10, 12, 13, 15, 18, 19, 22, 28, 30; Seivern, 1, 2, 7, 13, 15, 16, 22, 23; Society Hill, 2, 10, 20, 22, 26, 27, 31; Spartanburg, 16, 30; Stateburg, 8, 14, 16, 19, 21, 22, 24, 25, 26; Summerville, 3, 4, 15, 16, 17, 18, 19, 20, 21, 23, 25, 27, 28; Trenton, 1, 2, 3, 4, 12, 13, 14, 16, 17, 20, 21, 22, 23, 24, 25, 28, 29, 30, 31; Trial, 4, 11, 12, 19, 20, 21, 22, 28; Winthrop College, 1, 2, 22; Yorkville, 3, 13, 19, 20, 21, 28, 30.

## OBSERVERS' REMARKS.

**BARKSDALE.**—The latter half of the month was very rainy with scarcely any sunshine.—J. T. Garrett. **BATESBURG.**—There were twenty days with rain during the month, which is an unprecedented number for any one month at this station.—E. J. Hite. **BEAUFORT.**—The mean temperature was below normal and the total precipitation was above normal. The temperature was equable, and showers fell at frequent intervals throughout the month.—Sidney M. Benton. **BENNETTSVILLE.**—The month was unusually cloudy, there having been but three clear days, with rain on thirteen days.—C. S. McCall. **BOWMAN.**—The month was remarkable for the number of days with rain, the amount of cloudiness that occurred, and for an exceedingly heavy rainfall on the 26th, when in the course of somewhat over two hours 5.19 inches fell.—B. O. Evans. **CAMDEN.**—Persistent showery weather prevailed from the 10th to the end of the month; there were no high winds.—J. B. Mickle. **GREENVILLE.**—The weather was cloudy during the greater part of the month, and rain fell on sixteen days.—Mrs. S. A. Crittenden. **HEATH SPRINGS.**—There was an unusual amount of cloudy weather, and rain fell on 21 days, but there were no destructive storms.—J. A. Weaner. **LIBERTY.**—The month was damp, with frequent rains, but with warm sunshine between showers that stimulated growth of vegetation.—Jno. T. Boggs. **SANTUC.**—The month was very wet; trace, or more, of rain fell on 22 days, and some rain fell in sight of the station nearly every day. Mosquitoes and other insect pests became very numerous and troublesome.—E. W. Jeter. **SOCIETY HILL.**—During the summer of 1817 rain fell every day in Charleston, with such regularity that gentlemen would make appointments in the afternoons, "after the shower." The frequent showers of the current summer have a precedent. Charleston had an epidemic of yellow fever in 1817.—Maj. J. J. Lucas. **SUMMERVILLE.**—There was a slight earthquake tremor about 1:20 a. m. on the 5th.—Miss E. H. Gadsden. **TRENTON.**—The accumulated precipitation since January 1st is 9.40 inches more than the

average for the first eight months of the year. The excess in moisture and in cloudiness have been injurious.—C. A. Long. **YORKVILLE.**—The month was abnormally wet and the weather was generally unfavorable.—J. R. Schorb.

## BAROMETER AND WIND TABLE FOR AUGUST, 1906.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. § Exposed not standard.  
 \* On other dates also a indicates 1 day missing, b, 2 days, etc. c The state of sky at 8 a. m. not used in averages.  
 † Minimum thermometer not standard.

## ERRATA.

The following changes should be made in the July, 1906, number of the Monthly Reports: On page 53, the mean temperature at Batesburg, 77.4, should be 77.8; at Newberry the mean temperature, 79.2, should be 79.3; at St. Matthews the mean temperature, 78.8, should be 77.2; on page 54, at Batesburg the mean maximum temperature, 88.0, should be 88.6;

at Newberry the mean maximum temperature, 89.2, should be 89.3, and the mean minimum temperature, 69.2, should be 69.3; at St. Matthews the mean maximum temperature, 87.2, should be 84.0; on page 56, at Batesburg, the precipitation on the 16th, 1.27, should be .27 on the 15th; on pages 53 and 56, at Heath Springs, the total precipitation, 4.54, should be 5.03; at Walhalla the total precipitation, 13.47, should be 13.87; at Walterboro the total precipitation, 10.65, should be 11.65.

## CLIMATOLOGICAL REPORT: SOUTH CAROLINA SECTION.

AUGUST, 1906.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING AUGUST, 1906.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

MAP OF PRECIPITATION FOR AUGUST 1900

## DAILY PRECIPITATION FOR SOUTH CAROLINA, AUGUST, 1906.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR SEPTEMBER, 1906.

(Arrows fly with the wind).

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., SEPTEMBER, 1906.

No. 9.

## GENERAL SUMMARY.

The weather during September was abnormal in a number of its conditions, and was especially noteworthy in having been the warmest September in the last thirteen years, owing to both high daily maximum and high daily minimum temperatures, but more particularly the latter. There were no cool periods and there was no extreme heat, but there was an unusually even temperature from the first to the last of the month. This was illustrated by the fact that at eight stations both the highest and the lowest temperature for the month occurred on the same date, at six stations on the 9th, and at one station for each date on the 8th and 11th. The lowest minimum temperature was  $3^{\circ}$  higher than the previous record; the mean of the daily minimum temperatures was  $1.1^{\circ}$  higher than the previous highest; the mean of the daily maximum temperatures was within  $0.3^{\circ}$  as high as the previous highest; and the monthly mean was  $0.9^{\circ}$  higher than the previous highest monthly mean temperature.

It was also the second wettest September of record, the year 1894 alone having had a greater average rainfall. So also it was second in the average number of days with rain, there having been 12 days in 1894 and 9 in the current month. The thirteen-year September average is 5 days with rain. There were fewer clear days and more partly cloudy days than in any previous September, while the number of cloudy days was above the average number.

The first half of the month was warm and generally dry, with the exception of light rains on the 3rd-4th and the 11th-13th. A severe storm passed northwestward over the State on the 17th, attended by high winds that attained gale velocity along the coast and in the central counties, and by heavy precipitation in many places, especially in the east central counties, where amounts of more than four inches were measured, and in the extreme western counties, where the amounts ranged from two to three inches. The storm entered the State on the coast in the vicinity of Georgetown, where an aneroid barometer read 28.72 inches about noon. The center of the storm reached the vicinity of Columbia at 7 p. m., and the storm attained its greatest violence about midnight in the extreme northwestern part of the State. The storm decreased in violence as it progressed into the interior, but damaging winds occurred over the southern half of the whole State; on the northern side of the storm's center the winds were not so high and the damage done was comparatively insignificant.

The last decade had unsettled and threatening weather, with frequent showers, over the whole State, and with heavy precipitation in the extreme western counties and particularly in the mountain districts, where the monthly amounts were largely in excess of the normal.

## Temperature.

The mean temperature for September, 1906, was  $78.6^{\circ}$ , which is  $2.9^{\circ}$  above normal. The highest local mean was  $80.5^{\circ}$  at Blackville, the lowest  $71.9^{\circ}$  at Greenville. The monthly extremes of temperature were a maximum of  $98^{\circ}$  at Blackville on the 2nd, 6th, and 11th, and a minimum of  $55^{\circ}$  at Greenville on the 9th, making the State range  $43^{\circ}$ . The greatest local monthly range was  $37^{\circ}$  at Sumter, the least was  $22^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $87.7^{\circ}$ , and of the daily minimum temperatures was  $68.3^{\circ}$ , making the average daily range  $19.4^{\circ}$ .

## Precipitation.

The average precipitation was 4.85 inches, which is 0.80 of an inch above normal. The greatest local monthly amount was 14.37 inches at Walhalla, the least was 1.43 inches at Edisto. The greatest 24-hour rainfall was 4.45 inches at Trial on the 17th. The average number of days with 0.01 of an inch, or more, precipitation was 9, ranging from 3 at Winnsboro to 14 days at Spartanburg and Walhalla.

**EXCESSIVE PRECIPITATION.**—At Calhoun Falls on the 1st, 3.76 inches in 24 hours; at Camden on the 18th, 2.00 inches in 2 hours; at Chappels on the 17th, 2.64 inches in 5 hours; at Greenville on the 25th, 2.90 inches in 24 hours; at Kingstree on the 17th-18th, 3.10 inches in 24 hours; at Kingstree (2) on the 17th-18th; 2.95 inches in 24 hours; at Little Mountain on the 17th-18th, 2.46 inches in 17 hours and 30 minutes; at Pinopolis on the 17th, 4.00 inches in 24 hours; at Smith's Mills on the 17th-18th, 3.00 inches in 22 hours; at Stateburg on the 17th, 2.50 inches in about 12 hours; at Trial on the 17th, 4.45 inches in about 15 hours; at Trenton on the 17th-18th, 3.20 inches in 16 hours and 20 minutes; at Walhalla on the 18th, 2.84 inches in 24 hours.

## Wind.

The prevailing direction of the wind was from the northeast at 18 stations, from the east and south at 10 stations each, from the southwest at 5 stations, from the west at 3 stations, from the southeast at 2 stations, and from the north at 1 station.

**HIGH WINDS.**—High winds occurred at Beaufort, Bowman, Charleston, Columbia, Effingham, Georgetown, Kingstree, Newberry, Pinopolis, Sumter, Trial, Walhalla, Winthrop College on the 17th; at Blackville, Liberty, Saluda, Stateburg on the 17th, 18th; at Camden on the 3rd, 17th; at Society Hill on the 15th.

## Sunshine and Cloudiness.

The average number of clear days was 10, of partly cloudy days was 12, and of cloudy days was 8. The 13-year average for September is 15 clear days, 9 partly cloudy days, and 6 cloudy days.

## ERRATA.

The following corrections should be made in the August, 1906, Monthly Report: On page 61, at Clemson College, the highest temperature,  $92^{\circ}$  on the 12th, should be  $93^{\circ}$  on the 9th; at Seivern, the lowest temperature  $66^{\circ}$  on the 1st, should be  $66^{\circ}$  on the 1st and other dates. On page 62, at Winthrop College, the mean maximum temperature,  $89.3^{\circ}$ , should be  $89.2^{\circ}$ . On pages 61 and 64, at Walhalla, the total precipitation, 7.57, should be 7.67. On page 64, at Florence, the total precipitation, 5.75, should be 5.76.

## OBSERVERS' REMARKS.

BATESBURG.—A severe storm of wind and rain passed over the station on the 17th, during which time 2.80 inches of rain fell. The last week was cloudy with low temperature and frequent rains.—E. J. Hite. BEAUFORT.—The mean temperature was 1.8° above normal; the precipitation was 2.81 inches less than the normal amount. There were frequent rains but they were confined to small areas and they were generally light.—S. M. Benton. BENNETTSVILLE.—The weather was generally clear during the first half of the month; the latter half was cloudy with too much rain. The sunshine was below the average.—C. S. McCall. BOWMAN.—The first half of the month was hot and dry; the latter half was showery and windy. A damaging storm prevailed on the 17th. The high winds began from the east, shifting by the north, and west, to the south. Many forest trees were blown down.—B. O. Evans. CAMDEN.—The weather was generally warm and dry during the first half of the month; the latter half had unsettled and showery weather. The storm of the 17th was the most severe that has occurred in many years.—J. B. Mickle. CONWAY.—The rainfall on the 17th is estimated, as the rain gage was blown down by the storm that prevailed all day. Small houses, chimneys, sheds, trees, fences, etc., were blown down, and the winds were more destructive on the seashore.—Miss Marjory G. Quattlebaum. GREENVILLE.—Although there were fifteen clear mornings, the sky was generally overcast during the middle of the day throughout the month, with almost daily rains after the 10th.—Mrs. S. A. Crittenden. HEATH SPRINGS.—The weather was generally unfavorable after the 11th. Rain fell on 11 days, with a total rainfall much above the September average. The mean temperature was also above normal.—J. A. Weaner. LIBERTY.—A heavy thunderstorm prevailed from 11 a. m. to 3 p. m. on the 4th. The month was very rainy and the winds and rain caused considerable damage.—John T. Boggs. NEWBERRY.—The gale on the 17th did much damage to forest trees and to telegraph and telephone wires.—W. G. Peterson. SALUDA.—High winds prevailed from 12 noon of the 17th to 2 a. m. of the 18th that did much damage to forest trees, etc.—Alvin Etheridge. SANTUC.—The prevailing weather was partly cloudy to cloudy after the 10th of the month, and there were numerous light rains. The wind storm of the 17th-18th was very severe.—E. W. Jeter. SOCIETY HILL.—High winds prevailed on the 15th. A lunar halo on the 29th showed prismatic colors very beautifully.—J. J. Lucas. STATEBURG.—The storm of the 17th-18th was very destructive to forest and fruit trees.—Dr. W. W. Anderson. SUMMERVILLE.—High winds began on the 16th that increased on the 17th into a storm of considerable severity. Many trees and fences were blown down. The height of the storm was between the hours of 12 noon and 4 p. m.—Miss E. H. Gadsden.

## MISCELLANEOUS PHENOMENA.

PARHELION.—At Liberty on the 29th.

SOLAR HALOS.—At Charleston on the 27th, 29th.

LUNAR HALOS.—At Beaufort on the 28th; at Blackville on the 1st, 27th, 28th; at Bowman on the 25th, 26th, 27th, 28th; at Camden on the 4th, 27th; at Charleston on the 23rd, 25th, 26th, 27th, 28th; at Columbia on the 26th, 27th, 28th, 29th; at Greenville on the 29th; at Little Mountain on the 27th, 29th; at Santuc on the 26th, 27th.

DENSE FOGS.—At Blackville on the 22nd, 30th; at Bowman on the 11th, 12th, 20th, 21st, 22nd, 23rd; at Camden on the 11th, 13th, 20th; at Columbia on the 11th, 13th; at Heath Spring on the 2nd, 13th; at Liberty on the 5th, 13th, 21st,

24th, 30th; at Saluda and Santuc on the 13th; at Society Hill on the 11th, 12th; at Winthrop College on the 13th, 24th; at Yorkville on the 20th.

THUNDERSTORMS.—Seventy-three thunderstorms were reported from eighteen stations on nineteen dates during September, as follows: From Beaufort on the 1st, 2nd, 4th, 6th, 13th, 19th, 20th, 23rd; from Bowman on the 5th; from Camden on the 3rd, 19th, 23rd; from Charleston on the 1st, 4th, 5th, 13th, 14th, 19th, 23rd; from Cheraw on the 24th, 25th; from Columbia on the 4th, 12th, 19th, 24th; from Georgetown on the 14th, 23rd; from Greenville on the 11th; from Liberty on the 3rd, 4th, 5th, 11th, 12th, 13th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 29th; from Newberry on the 2nd, 3rd, 12th, 19th, 23rd, 24th; from Saluda on the 3rd, 12th, 23rd; from Santuc on the 3rd, 12th, 20th, 23rd; from Society Hill on the 18th, 23rd; from Stateburg on the 21st; from Summerville on the 1st, 4th, 13th, 19th, 20th; from Trenton on the 1st, 3rd, 4th, 11th, 12th, 22nd, 23rd; from Trial on the 4th; and from Yorkville on the 3rd, 12th.

The station at Seivern, Aiken county, has been permanently discontinued. A station was first established in that vicinity in May, 1894, at Shaw's Fork, and was removed to Seivern, about five miles distant, in February, 1904. The records from that vicinity show some peculiar climatic features, especially in the matter of low minimum temperatures. The lowest minimum temperature recorded at any station in South Carolina since the establishment of the climatic service of the Weather Bureau occurred at Shaw's Fork on February 14th, 1899, when a reading of eleven below zero was noted. The lowest minimum temperature that has been noted in May was recorded on the 10th of that month in 1906 at Seivern, when a reading of 30° was recorded, with killing frost, this being the latest killing frost of record in this State.

CLIMATOLOGICAL DATA FOR THE MONTH OF SEPTEMBER, 1900.

UNDER DIRECTION OF

WILLIS L. MOORE

CHIEF U. S. WEATHER BUREAU

BY

J. W. BAUER

SECTION DIRECTOR

RALEIGH, N. C.  
WEATHER BUREAU OFFICE  
NOVEMBER 24, 1906.

A detailed map of Georgia with county boundaries and names. Red arrows indicate the movement of the 1880-81 winter weather system across the state. The arrows show a general path from the northwest to the southeast, with some local variations. Key locations marked include Savannah, Augusta, Macon, and Atlanta. The map also shows the Atlantic Ocean to the east and the Florida border to the south.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., OCTOBER, 1906.

No. 10.

## GENERAL SUMMARY.

The current October was the coldest since 1896, and at some stations was the coldest of record. High temperatures and generally cloudy weather with frequent rains prevailed from the 1st to the 6th, after which the temperature fell slowly to the 10th, with occasional widely scattered showers and partly cloudy weather. A cool wave passed over the State from the 11th to the 14th, causing unusually low minimum temperatures, and the lowest October minimum temperature of record occurred at Heath Spring on the 12th. Frosts were general during this period to within a few miles of the coast. The frosts were killing over a large portion of the State on the 11th, being the earliest killing frost of record at such stations where it occurred. Cloudiness increased rapidly during the 15th and a general rainy and cloudy period began on the 16th, which continued to the 24th, with the temperatures generally above normal. Unusually heavy rainfall occurred in Georgetown and Horry counties on the 20th, and gales prevailed along the entire coast, the winds attaining hurricane velocity in places, with a recorded maximum velocity of 64 miles per hour at Charleston and an estimated maximum velocity of 60 miles per hour at Beaufort. After the 24th, the weather cleared and remained clear to the end of the month. A second cool wave crossed the State from the 29th to the 31st, causing killing frosts to within a few miles of the coast, and light frosts along the coast except in the extreme southeastern portion.

There were fewer clear and partly cloudy days and more cloudy days than the average numbers for this month. The month as a whole may be characterized as having been unusually cool, and wet, especially along the northern portion of the coast, where the rainfall was excessive. As usual, the prevailing direction of the wind was from the northeast.

## Temperature.

The mean temperature for October, 1906, was  $61.9^{\circ}$ , which is  $1.7^{\circ}$  below normal. The highest local mean was  $66.2^{\circ}$  at Charleston, the lowest  $56.6^{\circ}$  at Greenville. The monthly extremes of temperature were a maximum of  $90^{\circ}$  at Sumter on the 1st, and a minimum of  $24^{\circ}$  at Heath Spring on the 12th, making the State range  $66^{\circ}$ . The greatest local monthly range was  $60^{\circ}$  at Heath Spring and Sumter, the least was  $40^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $71.7^{\circ}$ , and of the daily minimum temperatures was  $52.1^{\circ}$ , making the average daily range  $19.6^{\circ}$ .

## Precipitation.

The average precipitation was 3.69 inches, which is 0.61 of an inch above normal. The greatest local monthly amount was 12.15 inches at Georgetown, the least was 0.84 of an inch

at Bennettsville. The greatest 24-hour rainfall was 6.00 inches at Georgetown on the 20th. The average number of days with 0.01 of an inch, or more, precipitation was 7, ranging from 3 at Allendale, Blairs, and Chappels to 11 days at Beaufort, Heath Spring and Newberry.

**EXCESSIVE PRECIPITATION.** At Beaufort on the 1st, 2.54 inches in 5 hours; at Camden on the 18th-19th, 4.03 inches in 24 hours; at Camden (2) on the 18th-19th, 3.94 inches in 24 hours; at Catawba on the 19th, 2.50 inches in 24 hours; at Conway on the 20th 21st, 2.80 inches in 24 hours; at Georgetown on the 20th, 6.00 inches in 24 hours; at St. George on the 18th, 4.00 inches in 3 hours; at St. Matthews on the 18th-19th, 2.50 inches in 16 hours; at Smiths Mills on the 20th, 2.40 inches in 14 hours; at Stateburg on the 17th-18th, 5.47 inches in 24 hours; at Trial on the 18th, 2.22 inches in 11 hours, 30 minutes.

## Wind.

The prevailing direction of the wind was from the northeast at 26 stations, from the east at 9 stations, from the north at 8 stations, from the west at 5 stations, from the south, southwest, and northwest at 1 station each.

**HIGH WINDS.**—High winds occurred at Beaufort on the 6th, 20th, 21st; at Blackville on the 18th; at Bowman on the 17th, 20th; at Camden on the 6th, 9th, 19th, 20th, 25th, 31st; at Charleston, Georgetown, Summerville on the 20th; at Columbia, Yorkville on the 6th, 20th, 27th; at Liberty on the 6th; at Newberry, Trial on the 19th, 20th; at Saluda on the 21st.

## Sunshine and Cloudiness.

The average number of clear days was 14, of partly cloudy days was 6, and of cloudy days was 11.

## MISCELLANEOUS PHENOMENA.

**SOLAR HALO.**—At Charleston on the 30th.

**LUNAR HALOS.**—At Charleston and Stateburg on the 26th; at Little Mountain on the 5th.

**DENSE FOGS.**—At Camden, Liberty, Newberry, Society Hill on the 4th; at Cheraw on the 25th; at Columbia, Yorkville on the 5th; at Winthrop College on the 1st, 4th, 5th.

**THUNDERSTORMS.**—Nine thunderstorms were reported from five stations, on five dates, as follows: From Beaufort on the 2nd, 6th, 20th; from Charleston on the 2nd, 9th, 20th; from Cheraw and Summerville on the 3rd; from Stateburg on the 2nd.

**FROSTS.**—Frosts occurred in the western portion of the State on the 7th and 9th, and generally over the State on the 10th, 11th, and 12th, and from the 29th to the 31st inclusive. The first killing frost of the season was reported from the following stations: On the 11th from Anderson, Batesburg, Blairs, Chappels, Darlington, Dillon, Greenwood, Heath Spring, Little Mountain, Newberry, Pelzer, Saluda, Santuc, Society Hill, Spartanburg, Stateburg, Walhalla, Winthrop College, Yemassee, Yorkville; on the 10th from Liberty; on the 12th from Bennettsville, Cheraw, Florence, Kingstree, St. Matthews; on the 29th from Blackville, Clemson College, Columbia, Greenville, Trenton. The first light frost of the season occurred at Charleston on the 29th.

## ERRATA.

The following corrections should be made in the September, 1906, Monthly Report: On page 69, at Greenville the mean temperature,  $71.9^{\circ}$ , should be  $72.0^{\circ}$ ; at Pinopolis the mean temperature,  $78.0^{\circ}$ , should be  $77.8^{\circ}$ . On page 70, at Greenville, the mean minimum temperature,  $62.2^{\circ}$ , should be  $62.3^{\circ}$ ; at Winthrop College the minimum temperature on the 21st,  $68^{\circ}$ , should be  $67^{\circ}$ .

CLIMATOLOGICAL DATA FOR STATEBURG, S. C.

This station was established by the Signal Corps, U. S. Army, in 1881, with Dr. W. W. Anderson, M. D., as co-operative observer, and with but slight breaks that do not materially impair the record Dr. Anderson has taken daily observations ever since. Stateburg is in Latitude  $33^{\circ} 55'$  and Longitude  $80^{\circ} 23'$ ; its elevation is approximately 500 feet. Stateburg was named by Gen. Thomas Sumter, who lived there during and after the revolutionary war. It is located in the western part of Sumter county, on a spur of "The High Hills of Santee." The region is peculiar in its topographic features, being a miniature range of mountains forming a perfect dividing ridge for nearly fifty miles, between the Wateree river on the west and the Pocotaligo river on the east, and to the southward the hills abut on the swamps of the Wateree river near its junction with the Congaree river. The immediate vicinity of Stateburg is a moderately level tableland, having an average width of about five miles. Dr. Anderson's premises occupy the highest point of this tableland, with gentle slopes in every direction.

For seven and a half years after the establishment of the station, the thermometers used were made by J. Kendall & Co., and for the first year were exposed on the outside of a window facing north with only the ordinary window-shutters for a shelter. This was unsatisfactory and they were removed to the north window of a small Pise outbuilding in

1882, within a small lattice-work shelter. Up to 1887 the daily mean temperatures and the daily maximum and minimum temperatures were obtained from ordinary thermometers. In August, 1887, a set of maximum and minimum thermometers was received from the Signal Corps, and the same instruments have been used ever since. A standard Cotton Region shelter was received in January, 1898, and was set up about 60 feet to the westward of the dwelling, in an open space, and the location has not been changed to date. In February, 1893, the method of deducing the mean daily temperature was changed from using the 7 a. m., 2 p. m., and 9 p. m. readings of an ordinary thermometer to that ordinarily used, which is half the sum of the maximum and minimum for the day.

The rain gage used from 1881 to February, 1893, was a 9-inch conical gage made by Benjamin Pike, and was exposed about 30 feet south of the dwelling in an open space. In February, 1893, a standard Weather Bureau rain gage was received and exposed in a vegetable garden in an open space of more than 60 feet from any building or tree, and about two feet above the surface of the ground.

The following table summarizes the record obtained:

| Month            | Temperature<br>1881-1905. |          |         | Precipitation, in<br>inches,<br>1881-1905. |                   |                   | Average Number of<br>Days,<br>1894-1905. |        |                |         | Prevailing Wind Direction. |

Highest temperature ever recorded,  $105^{\circ}$ , August 20, 1900.

Lowest temperature ever recorded,  $3^{\circ}$ , February 14, 1899.

Greatest monthly precipitation ever recorded, 18.42 inches, June, 1903.

Least monthly precipitation ever recorded, 0.56 inches, October, 1901.

Greatest precipitation ever recorded in 24 consecutive hours, 5.47 inches, October 17th-18th, 1906.

Greatest snowfall ever recorded in one storm, 14.7 inches, February 11th-13th, 1899.

Warmest year, 1900, with an average temperature of  $65.1^{\circ}$ .

Coldest year, 1885, with an average temperature of  $60.5^{\circ}$ .

Wettest year, 1903, with a total precipitation of 59.99 inches.

Driest year, 1886, with a total precipitation of 32.61 inches.

Latest date of killing frost in Spring, April 19, 1905.

Earliest date of killing frost in Autumn, October 11, 1906.

Average date of latest killing frost in Spring, April 1.

Average date of earliest killing frost in Autumn, November 16.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR NOVEMBER, 1906

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., NOVEMBER, 1906. No. 11.

## GENERAL SUMMARY.

The weather was generally clear and pleasant from the 1st to the 10th, but the temperature was unusually low from the 1st to the 7th, and was high from the 8th to the 11th, the maximum temperature for the month having been recorded at a few stations on the 9th and 10th. There was no precipitation from the 1st to the 10th, inclusive. A general rainy period began on the 11th, with thunderstorms in the central and northeastern portions, and continued to the 20th, mostly as widely scattered light showers, except on the 14th when the precipitation area extended over the entire State, as rain, sleet, and snow in the western and central portions, and as rain only in the eastern portion.

The snowfall in the northwestern counties was the heaviest of record for November, from one to over four inches having fallen over a wide area, of which from a trace to three inches remained on the ground for several days, while the rest melted as it fell. In the central and middle western counties the precipitation consisted of rain, sleet and snow. The sleet and snow melted as they fell.

The temperature was unusually low on the 13th and 14th, causing the minimum temperatures for the month on these dates at all stations. A period of abnormally high temperatures occurred from the 17th to the 23rd, and the maximum temperatures for the month were noted at all but a few stations from the 18th to the 22nd. Thunderstorms occurred in the western counties on the 18th.

The temperature was below normal from the 24th to the end of the month.

There was no precipitation after the 20th in any part of the State, and the weather was generally clear with only occasional short periods of cloudiness.

Frosts were noted on an unusually large number of days. The first killing frost of the season occurred at a small number of stations on the 1st, at some stations on the 12th and 13th, and on the immediate coast on the 16th.

The mean temperature for the month was about normal, but the daily departures were at times from  $15^{\circ}$  to  $20^{\circ}$  both above and below normal. The average precipitation was below normal and it was the smallest of record in the past 13 years. It was evenly distributed except that slightly larger

amounts were noted in the extreme eastern and western portions than in the other parts of the State. The average number of clear days was larger than usual, and the average number of cloudy days was the smallest of record.

## Temperature.

The mean for November, 1906, was  $53.8^{\circ}$ , which is  $0.1^{\circ}$  above normal. The highest local mean was  $58.6^{\circ}$  at Beaufort and Charleston, the lowest was  $47.9^{\circ}$  at Greenville. The monthly extremes of temperature were a maximum of  $89^{\circ}$  at Blackville on the 9th, and a minimum of  $20^{\circ}$  at Greenville on the 13th and 14th, making the State range  $79^{\circ}$ . The greatest local monthly range was  $61^{\circ}$  at Walterboro, the least was  $43^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $66.7^{\circ}$ , and of the daily minimum temperatures was  $41.0^{\circ}$ , making the average daily range  $15.7^{\circ}$ .

## Precipitation.

The average precipitation was 0.96 of an inch, which is 1.84 inches below normal. The greatest local amount was 2.36 inches at Walhalla, the least was "trace" at Winnsboro. The greatest 24-hour rainfall was 1.33 inches at Walhalla on the 18th. The average number of days with 0.01 of an inch, or more, precipitation was 3, ranging from none at Winnsboro to 6 days at Anderson.

## Wind.

The prevailing direction of the wind was from the northeast at 13 stations, from the southwest at 11 stations, from the northwest at 8 stations, from the north at 7 stations, from the west at 3 stations, and from the east and the southeast at 1 station each.

## Sunshine and Cloudiness.

The average number of clear days was 18, of partly cloudy days was 8, and of cloudy days was 4.

## MISCELLANEOUS PHENOMENA.

SOLAR HALO.—At Charleston on the 1st.

LUNAR HALO.—At Liberty on the 20th.

PARHELIA.—At Beaufort and Santuc on the 14th.

HIGH WINDS.—At Camden on the 27th; at Charleston on the 1st; at Liberty on the 9th, 11th; at Stateburg on the 11th.

DENSE FOGS.—At Beaufort on the 19th, 20th; at Blackville on the 15th; at Camden, Society Hill, Stateburg, Winthrop College, on the 20th; at Charleston, Georgetown on the 19th; at Columbia on the 14th, 20th; at Yorkville on the 8th.

THUNDERSTORMS.—There were nine thunderstorms on two dates, as follows: at Camden, Columbia, Saluda, Society Hill, Stateburg on the 11th; at Liberty, Greenville, Santuc, Yorkville on the 18th.

SLEET.—Sleet was reported from the following stations: At

Beaufort, Bowman, Camden, Cheraw, Columbia, Little Mountain, Newberry, Society Hill, Stateburg, Sumter, Trenton on the 14th; at Darlington on the 15th.

**SNOW.**—Snow fell over the western and central parts of the State on the 14th, varying in depth from "trace" to slightly over four inches, the heaviest snowfall having occurred in the northwestern counties, where it remained on the ground several days, while in the central parts of the State the snow melted as it fell.

**KILLING FROSTS.**—The first killing frost of the season was noted at the following stations during November, and this list is supplementary to the one published in the October Monthly Report: At Aiken, Allendale on the 12th; at Beaufort, Conway on the 14th; at Bowman on the 2nd; at Camden Kingstree, Little Mountain, St. Stephens, Summerville, Winnsboro on the 1st; at Charleston, Clarks Hill on the 16th; at Sumter on the 15th.

#### REMARKS BY OBSERVERS.

**BEAUFORT.**—The month was very dry, the precipitation having been 2.01 inches below normal. **BENNETTSVILLE.**—The greater portion of the month was dry with bright sunshine. **BOWMAN.**—The month was noteworthy for the small amount of precipitation and for the large number of clear days and generally pleasant weather. **GREENVILLE.**—Snow began falling on the 14th at 12.30 p. m. and ended at about 5 p. m., with a depth of three inches on the ground at that time and about one inch melted as it fell. **LIBERTY.**—The greater portion of the month had favorable weather. **NEWBERRY.**—The month as a whole was cool, but the weather was exceedingly pleasant during the greater portion. **SANTUC.**—The greater portion of the month had fair weather. There were a few abnormally warm days. Streams were lower than during any other month of the year. **TRENTON.**—The sleet that fell on the 14th melted as it fell. By the end of the month, the total precipitation since January 1st was 6.44 inches more than the normal for the same time.

\* On other dates also.

#### ERRATA.

The following corrections should be made in the October, 1906, number of the Monthly Report. On page 77, the mean temperature at Bowman, 62.9°, should be 63.0°; at Little Mountain the highest temperature, 80°, on the 1st, should be 81° on the 1st. On pages 77 and 80, at Trial the total precipitation, 3.82, should be 4.22; at Winnsboro the total precipitation, 2.35, should be 3.35. On page 78, at Bowman the mean maximum temperature, 72.9°, should be 73.0°.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1886.

U. S. DEPARTMENT OF AGRICULTURE,

**CLIMATOLOGICAL SERVICE**

OF THE

**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. IX. COLUMBIA, S. C., DECEMBER, 1906. No. 12.

**GENERAL SUMMARY.**

The mean temperature was one degree above normal but the daily fluctuations of temperature were at times rapid and severe. The month began with a period of warm and very pleasant weather, the maximum temperature for the month having occurred on the 1st and on the 3rd at a number of stations. The 6th was another warm day, on which thunderstorms were noted in all portions of the State. The 10th was also very warm, and a period of unusually high temperatures began on the 13th and ended on the 17th during which the maximum temperatures were noted at a majority of the stations. After the 18th the temperature was below normal until the last three days which were mild and pleasant.

The coldest weather of the month began on the 23rd and ended on the 27th. During this period the minimum temperatures were recorded at all stations, generally on the 24th and 25th.

Maximum temperatures of 70°, or above, were noted on eleven days in the extreme southeastern portion of the State, and on an average of eight days in the central portions, while in the western portion the maximum temperatures were generally below 70°, altho at a few stations the maximum was slightly above 70° on one day.

The minimum temperatures fell to 32°, or below on from eight to twenty days in the western half of the State; on an average of eight days in the central and northeastern portion, and on five days along the southeastern coast.

The precipitation was heaviest in the extreme western and northwestern tier of counties where it was largely in excess of the normal amount. It was very evenly distributed over the rest of the State, the amounts having been nearly normal in all sections except in parts of the coast regions and in the lower Savannah valley where deficiencies of over an inch occurred.

There were four well defined rainy periods, beginning on the 5th, 10th, 16th, and 27th, respectively. The first two periods were short and had comparatively light rainfall, the last two were much longer and had heavier rainfall. The heaviest rains were noted generally on the 14th, 20th, and 31st. The precipitation was practically all in the form of rain altho a trace of sleet fell on the 19th in the central and

western portions and a trace of snow on the 22nd in the north central and northeastern portions, both melting as they fell. There was an ice storm in the western portion of the State on the 19th and 20th, altho the ice coating did not become heavy enough to do any damage.

The wind movement was unusually light on a number of days, the total movement having been less than 100 miles on 14 days at Columbia, and less than 50 miles on 5 days. The maximum velocity was only 3 miles per hour on the 2nd, only 4 miles per hour on the 10th, and only 5 miles per hour on the 9th and 19th, at Columbia.

The prevailing direction of the wind was from the southwest for the first time in the last 13 years.

The average number of clear days was the same as the average number for the past 13 years, while the number of partly cloudy days was greater, and the number of cloudy days was less than the 13-year average.

**Temperature.**

The mean for December, 1906, was 48.0°, which is 1.0° above normal. The highest local mean was 53.7° at Sumter, the lowest was 41.4° at Greenville. The monthly extremes of temperature were a maximum of 89° at Blackville on the 14th, and a minimum of 11° at Dillon on the 26th, making the State range 78°. The greatest local monthly range was 71° at Blackville, the least was 51° at Beaufort. The mean of the daily maximum temperatures was 58.1°, and of the daily minimum temperatures was 38.0°, making the average daily range 20.1°.

**Precipitation.**

The average precipitation was 3.25 inches, which is 0.18 of an inch above normal. The greatest local amount was 7.71 inches at Walhalla, the least was 1.18 inches at Winnsboro. The greatest 24-hour rainfall was 2.90 inches at Walhalla on the 31st. The average number of days with 0.01 of an inch, or more, precipitation was 7, ranging from 3 days at Blairs and St. Matthews to 10 days at Anderson, Beaufort, Little Mountain, Saluda, and Summerville.

**Wind.**

The prevailing direction of the wind was from the southwest at 20 stations, from the north and the west at 8 stations each, from the northeast at 6 stations, from the northwest at 5 stations, and from the south at 3 stations.

**HIGH WINDS.**—At Bowman on the 3rd, 6th, 31st; at Camden on the 3rd, 6th, 17th, 23rd; at Charleston and Santuc on the 3rd; at Columbia on the 6th; and at Newberry on the 3rd, 6th.

**Sunshine and Cloudiness.**

The average number of clear days was 14, of partly cloudy days was 8, and of cloudy days was 9.

## MISCELLANEOUS PHENOMENA.

SOLAR HALO.—At Charleston on the 10th.

LUNAR HALOS.—At Camden on the 31st; at Charleston on the 27th; at Winthrop College on the 1st, 3rd, 31st.

SNOW.—At Bowman, Heath Springs, Society Hill, Summerville on the 22nd.

SLEET.—At Aiken, Liberty, Spartanburg, Trenton on the 19th; at Batesburg, Santuc on the 20th; at Yorkville on the 19th, 20th.

THUNDERSTORMS.—At Liberty on the 5th; at Beaufort, Camden, Columbia, Newberry, Saluda, Society Hill, Spartanburg, Trial on the 6th; at Cheraw on the 7th.

DENSE FOGS.—At Aiken, Camden, Cheraw, Columbia, Georgetown on the 29th; at Blackville on the 28th, 29th; at Beaufort on the 13th, 16th, 29th, 31st; at Charleston on the 20th, 29th, 31st; at Darlington on the 30th; at Greenville, Little Mountain, Santuc, Society Hill, Yemassee on the 29th, 30th; at Liberty on the 21st, 28th, 29th, 30th; at Newberry, Winthrop College on the 28th, 29th, 30th.

## REMARKS BY OBSERVERS.

BEAUFORT.—The total precipitation for the year 1906 was 53.14 inches, which is 5.04 inches in excess of the normal amount.

BOWMAN.—The most noteworthy features of the December weather were the small amount of precipitation for the first 18 days, and the low temperature during the third decade.

CLARKS HILL.—The rain that fell on the 19th froze as it fell.

DARLINGTON.—Rain on the 20th of the month froze as it fell.

LIBERTY.—The precipitation was well distributed thruout the month and kept the soil saturated. The hard freeze from the 23rd to the 27th did some damage.

SANTUC.—With the exception of the 24th and 25th, which were unusually cold, the weather was mild thruout the month. The precipitation was well distributed and the rains were light until on the last day.

TRENTON.—The precipitation for the year was 6.73 inches in excess of the normal amount.

WALHALLA.—The rainfall for the month was 4.73 inches above the normal.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR JANUARY, 1907.

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. DAUER, Section Director.

Vol. X.

COLUMBIA, S. C., JANUARY, 1907.

No. 1.

## GENERAL SUMMARY.

The monthly mean temperature was nearly eight degrees above normal. The daily mean temperatures were above normal every day from the 1st to the 20th, inclusive, and they were generally below normal from the 21st to the end of the month. The highest temperatures were noted at most stations on the 13th, 14th and 19th. The lowest temperatures were generally noted on the 24th and 29th.

Maximum temperatures of 80° or above, were recorded on from one to three days in the northeastern and eastern portions of the State except along the immediate coast, and at one station in the extreme northwestern portion (Walhalla). Maximum temperatures of 70°, or above, were recorded on an average of six days in the western counties; on from seven to sixteen days in the central and eastern portions; and on nineteen days at three stations in the east central portion.

Minimum temperatures below 32° were recorded on from seven to ten days in the western half of the State; on from four to six days in the central and eastern portions, except on the coast where the minimum fell to 32°, or below, on two days only. The minimum temperature did not fall to 32°, or below, in any portion of the State from the 1st to the 20th.

The average precipitation was the least of record for any January since 1889, when rainfall observations were first begun. The average precipitation was only 20 per cent of the normal amount. The amounts were generally less than an inch in all parts of the State, except that small, scattered areas had from one to two inches. The rainfall was below normal at every station.

There were four well defined rainy periods, beginning on the 10th, 20th, 26th and 31st. Each period was of short duration and had light rainfall, except on the 26th when the precipitation was moderately heavy in all parts of the State. The precipitation was all in the form of rain with the exception of a trace of snow in Anderson and Spartanburg counties on the 27th.

The average number of clear and partly cloudy days was larger than usual, and the average number of cloudy days was the smallest of record.

In comparison with the weather of previous Januarys, the present month most nearly resembled that of 1890, which is

the warmest January of record having had a monthly mean temperature of 54.1°, or 7.1° higher than that of the present month. The maximum temperature was higher this month, but the mean of the daily maximum temperatures was not quite so high as in 1890. The minimum temperature was one degree higher, and the mean of the daily minimum temperatures was 1.8 lower than in 1890. The present month was the second warmest, and the driest of record, and had fewer rainy and cloudy days than any January since observations were begun in 1889.

## Temperature.

The monthly mean for January, 1907, was 53.4°, which is 7.7° above normal. The highest local monthly mean was 57.7° at Beaufort, the lowest was 47.2° at Greenville. The monthly extremes were a maximum of 89° at Conway and at Florence on the 13th, and a minimum of 18° at Darlington and at Dillon on the 29th, making the State range 71°. The greatest local monthly range was 67° at Conway and at Florence, the least was 46° at Beaufort. The mean of the daily maximum temperatures was 64.1° and of the daily minimum temperatures was 42.6°, making the average daily range 21.5°.

## Precipitation.

The average precipitation was 0.71 of an inch, which is 2.88 inches below normal. The greatest local monthly amount was 1.91 inch at Georgetown, the least was trace at Catawba and at Yorkville. The greatest 24-hour rainfall was 1.11 inches at Georgetown on the 26th. The average number of days with 0.01 of an inch, or more, precipitation was 4, ranging from none at Catawba and Yorkville to 7 at Newberry.

## Wind.

The prevailing direction of the wind was from the southwest at 18 stations, from the northeast at 9 stations, from the south at 8 stations, from the west at 6 stations, and from the north, east and northwest at 2 stations each.

HIGH WINDS.—High winds were noted at Beaufort on the 19th; at Camden and Columbia on the 4th, 12th, 20th; at Charleston, Liberty, and Yorkville on the 20th.

## Sunshine and Cloudiness.

The average number of clear days was 15, of partly cloudy days was 9, and of cloudy days was 7.

## MISCELLANEOUS PHENOMENA.

SOLAR HALO.—At Liberty on the 8th.

LUNAR CORONAE.—At Winthrop College on the 7th, 8th.

SNOW.—Trace of snow fell at Anderson, Liberty and Spartanburg on the 27th.

DENSE FOG.—Dense fogs of one hour, or longer, duration were noted as follows: At Beaufort and Bowman on the 1st; at Bennettsville on the 7th, 8th, 15th; at Blackville on the 13th, 17th, 18th; at Camden on the 16th, 17th; at Charleston on the 1st, 6th, 17th; at Cheraw, Clarks Hill, Summerville,

Walterboro on the 17th; at Columbia on the 1st, 7th, 10th, 11th, 16th, 17th; at Darlington on the 17th, 18th, 19th; at Greenville on the 26th; at Heath Spring on the 6th, 7th, 17th, 31st; at Liberty on the 3d, 17th, 19th; at Little Mountain on the 17th, 18th; at Newberry on the 1st, 17th, 18th; at Santuc on the 7th, 16th, 17th; at Society Hill on the 2d, 7th, 17th, 18th; at Trenton on the 10th, 17th, 18th; at Trial on the 1st, 14th, 15th, 16th, 17th, 18th; at Winthrop College on the 7th, 8th, 16th, 17th, 25th; at Yorkville on the 3d, 7th, 8th, 16th, 17th, 18th, 17th, 18th, 26th.

## REMARKS BY OBSERVERS.

AIKEN.—The month was very warm and generally clear; Japanese magnolias were in full bloom on the 15th.—C. F. McGahan, M. D.

BATESBURG.—The weather was generally clear and warm from the 1st to the 21st, and was cold and mostly cloudy with some rainfall from the 21st to the 31st.

BEAUFORT.—The monthly mean temperature was the highest of record for any January except January 1900, at this station. The precipitation was 1.99 inch below normal.

BOWMAN.—The month was noteworthy for its mild and pleasant weather from the 1st to the 21st, from which date to the close the weather was cold, generally cloudy and typical of the ordinary winter season. Wild jessamine and plum trees were in bloom and different kinds of shrubbery began to bud.—B. O. Evans.

CAMDEN.—The month was unusually warm and the rainfall very light.—J. B. Mickle.

CLARK'S HILL.—Plum trees began blooming toward the close of the month but other fruit trees were not so advanced.—Wm. S. Middleton.

HEATH SPRING.—The month was remarkable for its warmth up to the 21st, and for its light precipitation.—J. A. Weaner.

SANTUC.—The precipitation was unusually light, and the

temperature very high during the first two decades, causing some fruit trees to bud and bloom.—E. W. Jeter.

SOCIETY HILL.—The monthly mean temperature was the highest, and the precipitation was the least in the last fifteen years for the month of January.—Maj. J. J. Lucas.

TRENTON.—The precipitation was 2.84 inches below normal.—C. A. Long.

YORKVILLE.—It was not cold enough for the formation of frost from the 1st to the 21st.—J. R. Schorb.

## REMARKS BY OBSERVERS.

AIKEN.—The month was very warm and generally clear; Japanese magnolias were in full bloom on the 15th.—C. F. McGahan, M. D.

BATESBURG.—The weather was generally clear and warm from the 1st to the 21st, and was cold and mostly cloudy with some rainfall from the 21st to the 31st.

BEAUFORT.—The monthly mean temperature was the highest of record for any January except January 1900, at this station. The precipitation was 1.99 inch below normal.

BOWMAN.—The month was noteworthy for its mild and pleasant weather from the 1st to the 21st, from which date to the close the weather was cold, generally cloudy and typical of the ordinary winter season. Wild jessamine and plum trees

temperature very high during the first two decades, causing some fruit trees to bud and bloom.—E. W. Jeter.

SOCIETY HILL.—The monthly mean temperature was the highest, and the precipitation was the least in the last fifteen years for the month of January.—Maj. J. J. Lucas.

TRENTON.—The precipitation was 2.84 inches below normal.—C. A. Long.

YORKVILLE.—It was not cold enough for the formation of frost from the 1st to the 21st.—J. R. Schorb.

NOTE. —All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc. ° The state of sky at 8 a.m. not used in averages.

### STATIONS.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR JANUARY, 1907.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR FEBRUARY, 1907

(Arrows fly w. for the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. DAUER, Section Director.

Vol. X.

COLUMBIA, S. C., FEBRUARY, 1907.

No. 2.

## GENERAL SUMMARY.

The monthly mean temperature was below normal, but no extremely low temperatures occurred during the month. There was less than the usual number of days with minimum temperatures of 32° or below, especially along the coast where only three days with freezing temperatures were recorded. The number of days with freezing temperatures was larger in the interior, averaging from six to eight in the central parts of the State, from sixteen to nineteen in the North Carolina border counties, and twenty-two in the mountain districts. The coldest portion of the month was from the 6th to the 9th, with another cool period from the 23d to the 25th. The maximum temperatures at the different stations were recorded on eleven separate dates, no warm wave having been noted during the month. Generally the warmest days were the 2d, 3d, 13th, 15th, 19th, 25th, and the 27th.

The average precipitation was below normal. A few stations in the northeastern, the central, and the south central parts had monthly amounts slightly above normal. The greatest deficiencies occurred along the coast. A portion of the precipitation for the month was in the form of snow and sleet. The snowfall was heaviest in the northeastern counties where from one to six inches were recorded on the 7th and 8th. The western counties had about an inch of snowfall.

The prevailing winds were generally northeasterly and the wind movement was light in comparison with the usual movement for the same month in previous years.

The number of clear, partly cloudy and cloudy days was about normal.

In comparison with the February weather of previous years, the month had no noteworthy variations from average conditions, except in the matter of minimum temperatures, lower minimum temperatures having been recorded each year since 1894.

## Temperature.

The monthly mean for February, 1907, was 45.1°, which is 0.7° below normal. The highest local monthly mean was 52.0° at Beaufort, the lowest was 39.3° at Greenville. The monthly extremes were a maximum of 84° at Batesburg on the 19th, and a minimum of 16° at Dillon on the 9th, making the State range 68°. The greatest local monthly range was 65° at Batesburg, the least was 42° at Charleston and Clemson College. The mean of the daily maximum temperatures was 54.9°, and of the daily minimum temperatures was 35.3°, making the average daily range 19.6°.

## Precipitation.

The average precipitation was 3.63 inches, which is 1.08

inch below normal. The greatest local monthly amount was 5.63 inches at Society Hill, the least was 1.61 inch at Charleston. The greatest 24 hour rainfall was 2.23 inches at Batesburg on the 5th. The average number of days with 0.01 of an inch, or more, precipitation was 8, ranging from 4 at Bowman to 12 at Anderson.

## Wind.

The prevailing direction of the wind was from the north-east at 20 stations, from the west at 9 stations, from the northwest at 6 stations, from the southwest at 5 stations, from the north and east at 4 stations each, and from the south at 1 station.

**High Winds.** High winds were noted at Bowman on the 15th, 21st; at Camden on the 11th, 14th, 21st; at Charleston on the 23d; at Cheraw, Clarks Hill, Columbia, Newberry, Saluda, Trial and Winthrop College on the 14th; at Liberty on the 14th, 21st.

## Sunshine and Cloudiness.

The average number of clear days was 10, of partly cloudy days was 8, and of cloudy days was 10.

## MISCELLANEOUS PHENOMENA.

**SOLAR HALOS.**—At Liberty on the 25th.

**LUNAR HALOS.**—At Charleston and Little Mountain on the 22d; at Columbia on the 22d, 25th.

**THUNDERSTORMS.**—Seventeen thunderstorms were noted during the month on seven dates as follows: At Beaufort on the 2d, 14th; at Blackville on the 4th, 19th; at Charleston on the 3d, 4th, 14th; at Columbia, Effingham, Little Mountain and Trenton on the 4th; at Darlington on the 5th; at Dillon on the 6th, 14th; at Georgetown and Trial on the 14th.

**DENSE FOGS.**—Dense fogs of one hour, or longer, duration occurred as follows: At Beaufort on the 1st, 4th, 13th, 14th, 16th, 28th; at Blackville and Society Hill on the 3d; at Camden on the 1st, 3d; at Charleston on the 1st, 3d, 27th; at Columbia on the 1st, 25th; at Liberty on the 2d, 27th; at Santuc on the 26th; at Trial and Winthrop College on the 2d; at Walterboro on the 4th; at Yorkville on the 2d, 6th, 19th, 27th.

**SLEET.**—Sleet was noted as follows: At Aiken and Trial on the 7th; at Allendale, Blackville, Conway, Effingham, Georgetown, Saluda, Smiths Mills, and Summerville on the 8th; at Batesburg on the 8th, 24th; at Cheraw on the 20th, 24th; at Darlington on the 25th; at Greenville on the 5th, 24th; at Heath Spring on the 4th, 24th; at Liberty on the 4th, 5th, 24th; at Newberry on the 7th, 20th; at Santuc on the 4th, 23d; at Society Hill on the 4th, 24th; at Trial on the 7th; at Winthrop College on the 4th; at Yorkville on the 4th, 5th.

## REMARKS BY OBSERVERS.

BEAUFORT.—Ice formed heavily on all trees, vegetation, and buildings on the 8th, but caused very little damage except in spots.—SIDNEY M. BENTON. BOWMAN.—The February precipitation was below normal; the temperature was below normal except on occasional days at the beginning and near the middle of the month. No fruit trees came into bloom except some varieties of plum trees.—B. O. EVANS. CAMDEN.—The heaviest snowfall of the season occurred on the 8th, when about one-half of an inch fell.—J. B. MICKLE. LIBERTY.—The weather was favorable during nearly the whole month, but the temperature was very changeable.—Jno. T. Boggs. Santee.—The month had many and sudden changes in weather, and it was generally cold, but without any severe cold wave. There was more than the usual amount of cloudiness.—E. W. JETER. SUMMERVILLE.—Rain froze as it fell during the 8th, covering everything with ice, most of which had melted by 6 p. m. Trees were greatly damaged by the heavy weight of ice on them.—Miss E. H. Gadsden.

## ERRATA.

The following corrections should be made in the November, 1906, Monthly Report: On page 85, the mean monthly temperature at Dillon, 54.1, should be 53.0; at Aiken, 53.8 should be 53.6; at Clemson College, 51.0 should be 51.4; at Trial, 55.2 should be 55.1; at Walhalla, 53.3 should be 52.9. Same page: at Little Mountain the date of minimum temperature should be 14th and other dates; at Newberry, date of maximum temperature should be 19th and other dates; at Walhalla, date of minimum temperature should be 14th and other dates. On page 86: At Aiken, the minimum temperature on the 30th, 48, should be 38, and the mean minimum temperature, 43.4, should be 43.1; at Camden, the maximum temperature on the 1st, 55, should be 59; on the 12th, 65 should be 66; and the mean of maximum temperatures, 65.9, should be 66.1; at Clemson College, the maximum tempera-

ture on the 4th, 69, should be 70; on the 12th, 51 should be 60; on the 29th, 55 should be 60, and the mean maximum temperature, 63.0, should be 63.8; at Conway, the minimum temperature on the 13th, 39, should be 37; at Dillon, the mean maximum temperature, 67.2, should be 67.1; at Liberty, the maximum temperature on the 12th, 61, should be 62; at Trial, the minimum temperature on the 27th, 42, should be 36, and the mean minimum temperature, 41.8, should be 41.6; at Winnsboro, the maximum temperature on the 6th, 54, should be 55; at Walhalla, the mean maximum temperature 66.4, should be 66.1.

In the December, 1906, Monthly Report, the mean maximum temperature at Georgetown, page 94, 59.3, should be 59.2.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. \* Maximum thermometer not standard. † Minimum thermometer not standard. ‡ Exposed not standard. \* On other dates also. a indicates 1 day missing, b 2 days, etc. The state of sky at 8 a.m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING FEBRUARY, 1907.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

Vol. X.

COLUMBIA, S. C., MARCH, 1907.

No. 3.

## GENERAL SUMMARY.

The marked features of the month were the phenomenally high temperatures of the third decade over practically the entire State. While the temperatures averaged above normal almost continuously throughout the month, the marked excess of the monthly mean temperature was due principally to the large daily excesses after the 25th of the month, when the maximum temperatures rose to or above 90° on an average of from 6 to 7 days in the southeastern counties, from 5 to 6 days in the central counties, and from 2 to 4 days in the western and North Carolina border counties.

The maximum temperature records of former years were exceeded at every station from 1° to 6°.

The minimum temperatures fell to 32° at a few stations in the western portion of the State. The lowest temperatures were recorded generally on the 4th and 7th. There was another cool spell of short duration on the 16th, when frost occurred in exposed places in the central and western counties.

In the extreme western and a portion of the northeastern counties the precipitation averaged from 2 to 3 inches; in the central and southeastern counties the precipitation was generally less than an inch. The rainfall was below normal over the entire State, the deficiency ranging from 1 to 4 inches.

The precipitation was general over the State on the 1st, 2d, 15th, and 31st, while scattered showers occurred on the 7th, 8th, 9th, and 26th.

The prevailing winds were westerly, generally from the west and southwest, with northeast the next most frequent direction. The total wind movement and the average hourly velocity were above normal along the coast and about normal in the interior.

The number of clear and partly cloudy days was above normal, and the number of cloudy days was below normal.

In comparison with the March weather of previous years, the month was noteworthy for having had a higher mean maximum temperature, a higher monthly mean temperature and higher maximum temperatures than any other, and it was also the driest of record.

## Temperature.

The monthly mean temperature for March, 1907, was 62.0°, which is 7.7° above normal. The highest local monthly mean was 67.6° at Walterboro, the lowest was 55.0° at Greenville. The monthly extremes were a maximum of 99° at Blackville and Darlington, and a minimum of 20° at Greenville, making the State range 79°. The greatest local monthly range was 71° at Greenville, the least was 49° at Clemson College and Charleston. The mean of the daily maximum temperatures

was 74.3°, and of the daily minimum temperatures was 49.7°, making the average daily range 24.6°.

## Precipitation.

The average precipitation was 1.57 inch, which is 2.30 inches below normal. The greatest local monthly amount was 3.02 inches at Clemson College, the least was 0.59 of an inch at Blackville. The greatest 24-hour rainfall was 1.60 inch at Walhalla on the 5th. The average number of days with 0.01 of an inch, or more, precipitation was 5, ranging from 2 at Aiken, Allendale, Pinopolis, and Smith Mills to 9 at Little Mountain and Newberry.

## Wind.

The prevailing direction of the wind was from the west and southwest at 14 stations, from the northeast at 11 stations, from the north, east, and south at 3 stations each, and from the northwest at 1 station.

**HIGH WINDS.**—High winds were noted at Bowman on the 3d, 8th, 14th, 19th, 20th, 22d, 23d, 24th; at Camden on the 3d, 6th, 13th, 14th, 19th, 22d, 24th, 25th, 28th, 29th; at Charleston on the 16th; at Cheraw on the 19th; at Columbia on the 12th, 13th, 19th; at Liberty on the 2d, 3d, 19th, 20th, 22d, 23d, 24th, 31st; at Newberry on the 21st, 22d, 23d; at Society Hill on the 29th; at Winthrop College on the 3d; at Yorkville on the 25th, 31st.

## Sunshine and Cloudiness.

The average number of clear days was 15, of partly cloudy days was 10, and of cloudy days was 6.

## MISCELLANEOUS PHENOMENA.

**PARHELION.**—At Liberty on the 25th.

**LUNAR HALO.**—At Society Hill on the 28th.

**SOLAR HALOS.**—At Camden on the 9th; at Columbia on the 16th.

**HAIL AND SLEET.**—Hail occurred at Camden on the 31st; sleet at Winthrop College on the 7th.

**FOGS, DENSE.**—At Beaufort on the 1st, 17th, 22d; at Blackville, Santuc on the 22d; at Camden on the 1st, 10th, 18th, 22d; at Charleston, Cheraw, Darlington, Liberty on the 1st; at Columbia on the 1st, 2d; at Newberry on the 1st, 10th; at Winthrop College, Yorkville on the 1st, 18th, 22d.

**THUNDERSTORMS.**—There were 39 thunderstorms noted on 6 dates, as follows: at Beaufort, Bowman, Summerville on the 2d, 31st; at Blackville, Yorkville on the 15th; at Camden, Society Hill on the 14th, 31st; at Charleston on the 2d, 31st; at Cheraw on the 15th, 31st; at Columbia on the 14th, 15th, 31st; at Darlington, Dillon, Georgetown, Spartanburg, Trial on the 31st; at Greenville, Little Mountain on the 1st; at Liberty on the 2d, 26th; at Newberry on the 1st, 14th; at Saluda, Santuc, Winthrop College on the 2d, 15th; at Trenton on the 1st, 15th, 26th.

## ERRATA.

The following corrections should be made in the January, 1907, Monthly Report: On page 5, at Blackville, the mean temperature, 55.5°, should be 55.0°; at Cheraw, the date of minimum temperature, 29th, should be 24th and 29th. On page 6, at Blackville, the mean minimum temperature, 44.5°, should be 43.5°; at Darlington, the mean maximum temperature, 62.8°, should be 62.9°.

## REMARKS BY OBSERVERS.

BEAUFORT.—The maximum temperature exceeds by four degrees the previous highest on record for either March or April. The accumulated deficiency in rainfall since January 1st is 4.43 inches.—Sidney M. Benton. BOWMAN.—The month was remarkable for high temperatures during the third decade when midsummer heat prevailed, as well as for the small precipitation during the latter half of the month. The wind movement was unusually heavy.—B. O. Evans. CAMDEN.—The month was warm and vegetation made rapid growth. The third decade was exceptionally hot and dry.—J. B. Mickle. CLARK'S HILL.—Peach trees were in full bloom by the 20th.—Wm. S. Middleton. LIBERTY.—The precipitation was light but well distributed thruout the month, which with unusually high temperatures advanced vegetation rapidly. The month was very windy. Peach trees began to bloom on the 10th and pear trees on the 20th.—Jno. T. Boggs. SANTUC.—The month was generally warm, while the latter portion had almost midsummer heat. The maximum temperature for the month was the highest recorded in any March since the establishment of the station, a period of 14 years.—E. W. Jeter. SOCIETY HILL.—No killing frost occurred. The monthly mean temperature was the highest in 16 years, except in 1903, when it was 0.6° higher.—Maj. J. J. Lucas. SUMMERVILLE.—This was the warmest March of record, especially from the 20th to the end of the month.—Miss E. H. Gadsden. TRENTON.—The accumulated precipitation is 6.87 inches less than the normal for the first three months.—C. A. Long. YORKVILLE.—The weather was unusually warm during the latter part of the month.—J. R. Schorb.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. \* Maximum thermometer not standard. † Minimum thermometer not standard. § Exposed not standard. \* On other dates also. † indicates 1 day missing, 2, 2 days, etc. ‡ The state of sky at 8 a.m. not used in averages.

APPENDIX.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

100

## DAILY PRECIPITATION FOR SOUTH CAROLINA. MARCH, 1907.

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X.

COLUMBIA, S. C., APRIL, 1907.

No. 4.

## GENERAL SUMMARY.

The month ranked as the second coldest of record, owing principally to unusually low temperatures during the first half of the month. The latest killing frost, and thin ice, occurred on the 15th.

The precipitation was slightly below normal in the central counties and was generally above normal in the rest of the State. It was excessive in portions of the southern and eastern portions.

## TEMPERATURE.

The monthly mean temperature for April, 1907, was 56.4°, which is 5.7° below normal. The highest local monthly mean was 60.4° at Kingstree, the lowest was 50.8° at Greenville. The monthly extremes were a maximum of 89° at Blackville on the 26th, and a minimum of 20° at Walhalla on the 11th, making the State range 69°. The greatest local monthly range was 66° at Walhalla, the least was 41° at Charleston. The mean of the daily maximum temperatures was 67.7°, and of the daily minimum temperatures was 45.0°, making the average daily range 22.7°.

## PRECIPITATION.

The average precipitation was 4.40 inches, which is 1.05 inch above normal. The greatest local monthly amount was 9.07 inches at Edisto, the least was 2.40 inches at Winnsboro. The greatest 24-hour rainfall was 3.70 inches at Conway on the 23d. The average number of days with 0.01 of an inch, or more, precipitation was 10, ranging from 4 at Due West to 16 at Charleston, Beaufort, Conway, and Yemassee.

## WIND.

The prevailing direction of the wind was from the southwest at 15 stations, from the northeast, west and northwest at 9 stations, from the south at 4 stations, from the north at 3 stations, and from the east at 2 stations.

**HIGH WINDS.**—High winds were reported as follows: At Anderson on the 12th; at Beaufort on the 2d, 9th; at Bowman on the 1st, 9th, 10th, 12th, 13th, 14th; at Camden on the 8th, 23d; at Charleston on the 2d (50 miles per hour); at Cheraw on the 8th, 9th, 11th, 14th, 23d; at Clarks Hill and Columbia on the 23d (48 miles per hour); at Effingham on the 8th, 20th; at Heath Springs on the 1st, 2d, 23d; at Newberry on the 12th, 13th, 14th, 23d; at Society Hill on the 1st, 2d, 8th, 9th, 10th, 14th, 23d; at Stateburg on the 1st, 2d, 3d, 10th; at

Summerville on the 1st, 2d; at Trial on the 1st, 8th; at Yorkville on the 1st, 2d, 9th, 10th, 13th, 14th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 10, of partly cloudy days was 13, and of cloudy days was 7.

## MISCELLANEOUS PHENOMENA.

**SNOW.**—Trace of snow was noted at Liberty, Spartanburg, and Santuc on the 9th; at Newberry on the 9th, 11th.

**LUNAR HALOS.**—At Charleston, Columbia, Little Mountain on the 25th; at Santuc on the 26th, 27th; at Winthrop College on the 26th.

**SOLAR HALOS.**—At Beaufort on the 5th; at Camden on the 26th; at Charleston on the 25th; at Columbia on the 21st, 26th; at Liberty on the 7th; at Santuc on the 15th, 19th, 21st.

**HAIL.**—Hail was noted at Anderson, Cheraw, Greenville, Newberry, Santuc on the 8th; at Charleston on the 7th; at Liberty on the 8th, 19th, 27th.

**DENSE FOG.**—The following places reported dense fog: Beaufort on the 30th; Camden on the 23d; Charleston on the 18th; Columbia on the 29th; Greenville, Winthrop College on the 8th.

## REMARKS BY OBSERVERS.

BATESBURG.—The weather was unusually cool up to the 16th, while the latter half of the month was warmer and pleasant. Frost occurred on five mornings; ice and frozen ground on two mornings.—E. J. Hite. BEAUFORT.—The minimum temperature on the 15th was 6° below the coldest recorded in former years in April; the monthly mean temperature was the lowest in the last twenty years, and was 6.9° below the April mean temperature.—Sidney M. Benton. BOWMAN.—Except the last week which was warm and pleasant, the month was cold and disagreeable, with frequent killing frost up to the 15th that did much damage.—B. O. Evans. CAMDEN.—The first half of the month was remarkable for almost continuous fresh to brisk winds and unseasonably low temperatures.—J. B. Mickle. CLARKS HILL.—The month was unusually cold, with killing frost on the 2d and 15th, the latter damaging trees and other vegetation seriously.—Wm. S. Middleton. DILLON.—It was the coldest April of record.—A. E. Rowell. LIBERTY.—The freeze of the 15th denuded many forest trees of their leaves, and damaged vegetation generally. The rainfall for the month was well distributed.—Jno. T. Boggs. NEWBERRY.—A tornado passed over Chappells, in this county, on the 8th,

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard. \* On other dates also a indicates 1 day missing, b, 2 days, etc. The state of sky at 8 a. m. not used in averages.

[CONTINUED FROM PAGE 28.]

doing slight damage. There was killing frost, ice, and a slight ground freeze on the 15th.—W. G. Peterson. **SANTEE.**—The month was much colder than March, with a number of killing frosts that damaged vegetation. The month had well distributed and copious rainfall.—E. W. Jeter. **STATEBURG.**—The temperature was much below normal, and there were unusually high winds; on the 1st, 2d, and 3d the winds did as much, or more, damage than the frosts would have done that they prevented.—W. W. Anderson, M. D. **SOCIETY HILL.**—There was a disastrous freeze on the 15th, which date was the 58th anniversary of the great snow storm and freeze in 1849 which destroyed all vegetation even kill-

ing grapevines to the ground.—Maj. J. J. Lucas. **SUMMERVILLE.**—An earthquake was felt at 3.30 a. m. on the 19th. High winds prevailed on the 1st and 2d, and ice formed on the 3d that damaged vegetation seriously. The minimum of 28° on the 15th is the lowest temperature on record for April, the previous lowest having been 33°.—Miss E. H. Gadsden. **TRENTON.**—Frequent killing frosts and ground freeze on the 14th did much damage to vegetation, especially to fruit trees. The precipitation since January 1st is 7.49 inches less than the average for the first four months of the year.—U. A. Long. **YORKVILLE.**—The weather was unusually cold; the frost did great harm to vegetables, grapevines and fruit trees.—J. R. Schorb.

STATIONS

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.  
+ The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

+ The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR APRIL, 1907.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR MAY 1967

TEMPERATURE IN °F

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., MAY, 1907.

No. 5.

## GENERAL SUMMARY.

The mean temperature was below normal, due largely to low maximum temperatures thruout the month. The mean of the daily maximum temperatures was the second lowest of record, while the mean of the daily minimum temperatures was slightly above the average of the last 14 years. The highest maximum and the lowest minimum were well within the limits of previously recorded extremes.

The precipitation was well distributed geographically, all portions of the State having received ample moisture and only a comparatively small area in the south central portion having received an excessive amount.

There was a marked deficiency in bright sunshine, and, with one exception, the month had the smallest number of clear days of any previous May of record.

## TEMPERATURE.

The mean temperature for May, 1907, was  $70.8^{\circ}$ , which is  $1.4^{\circ}$  below normal. The highest local mean was  $73.1^{\circ}$  at Kingstree, the lowest was  $64.2^{\circ}$  at Greenville. The monthly extremes were a maximum of  $96^{\circ}$  at Little Mountain on the 20th and a minimum of  $41^{\circ}$  at Dillon on the 22d, making the State range  $55^{\circ}$ . The greatest local monthly range was  $51^{\circ}$  at Darlington, the least was  $29^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $80.8^{\circ}$ , and of the daily minimum temperatures was  $60.8^{\circ}$ , making the average daily range  $20^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.51 inches, which is 1.12 inches above normal. The greatest local monthly amount was 8.97 inches at Bowman, the least was 1.98 inch at Barksdale. The greatest 24-hour rainfall was 4.54 inches at Trial on the 30th-31st. The average number of days with 0.01 of an inch, or more, precipitation was 10, ranging from 6 days at Calhoun Falls and Georgetown to 15 days at Charleston and Walterboro.

## WIND.

The prevailing direction of the wind was from the southwest at 19 stations, from the south at 12 stations, from the west at 7 stations, from the northeast at 5 stations, from

the north and southeast at 2 stations each, and from the east at 1 station.

**HIGH WINDS.**—At Beaufort on the 27th; at Bowman on the 9th, 10th, 26th; at Camden on the 20th, 21st, 28th; at Charleston on the 26th; at Cheraw on the 8th, 9th; at Georgetown on the 12th; at Greenville on the 6th, 26th; at Liberty on the 18th, 23d, 27th; at Newberry on the 15th, 20th; at Trial on the 26th, 31st; at Winthrop College on the 8th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 11, of partly cloudy days was 12, and of cloudy days was 8.

## MISCELLANEOUS PHENOMENA.

**SOLAR HALOS.**—At Liberty on the 8th; at Saluda on the 8th, 20th, 24th, 29th.

**LUNAR HALOS.**—At Camden on the 20th, 26th; at Little Mountain, Saluda, and Santuc on the 19th.

**DENSE FOG.**—At Blackville and Charleston on the 3d; at Camden on the 15th.

**HAIL.**—At Beaufort on the 26th; at Liberty on the 2d, 26th; at Pelzer on the 2d.

**THUNDERSTORMS.**—There were 123 thunderstorms noted, on 21 dates, as follows: At Barksdale on the 24th; at Batesburg on the 4th, 7th, 9th, 25th, 26th; at Beaufort on the 1st, 3d, 9th, 12th, 15th, 25th, 26th, 27th, 30th, 31st; at Blackville on the 9th, 11th, 12th, 26th, 31st; at Bowman on the 3d, 4th, 7th, 8th, 9th, 11th, 25th, 26th, 31st; at Camden on the 3d, 6th, 8th, 9th, 10th, 25th, 26th, 31st; at Charleston on the 5th, 6th, 10th, 11th, 16th, 26th; at Cheraw on the 2d, 6th, 8th, 10th, 19th, 26th, 27th; at Columbia on the 3d, 6th, 8th, 9th, 24th, 25th, 26th, 31st; at Greenville on the 3d, 4th, 26th; at Liberty on the 2d, 6th, 7th, 20th, 24th, 25th, 26th, 31st; at Little Mountain on the 8th, 25th; at Newberry on the 2d, 3d, 6th, 8th, 25th, 26th, 31st; at Saluda on the 3d, 7th; at Santuc on the 3d, 4th, 6th, 8th, 20th, 24th, 25th, 26th, 31st; at Society Hill on the 1st, 6th, 8th, 26th; at Summerville on the 1st, 4th, 7th, 9th, 11th, 26th, 31st; at Trenton on the 2d, 3d, 6th, 8th, 27th, 30th, 31st; at Trial on the 1st, 3d, 6th, 11th, 26th, 31st; at Walterboro on the 25th; at Winthrop College on the 3d, 4th, 20th; at Yorkville on the 3d, 6th, 11th, 25th.

## REMARKS BY OBSERVERS.

**BARKSDALE.**—The night temperatures were too low thruout the month.—J. T. Garrett. **BEAUFORT.**—The precipitation was above normal and both temperature and sunshine were below normal.—Sidney M. Benton. **BOWMAN.**—The temperature was unusually low at times, and the precipitation excessive. The greatest 24 hour rainfall of record at this station occurred on the 31st when 4.06 inches fell in three and one-half hours.—B. O. Evans. **CAMDEN.**—The month was noteworthy for its heavy rainfall and generally low temperature.—J. B. Mickle. **LIBERTY.**—The noteworthy features of the weather for May were the deficiency in sunshine, the high relative humidity and the

low night temperatures.—Jno. T. Boggs. SALUDA.—Locusts were first heard on April 28th and they were quite numerous on May 1st, but disappeared by May 24th.—Alvin Etheridge. SOCIETY HILL.—The mean temperature was below, and the precipitation was above normal.—Maj. J. J. Lucas. TRENTON.—The accumulated precipitation since January 1st is 5.26 inches less than the average for the first five months of the year.—C. A. Long. TRIAL.—There were three distinct showers on the 31st, as follows: From 3 a. m. to 9 a. m., 2.05 inches; 2 p. m. to 3 p. m., 0.03 of an inch; and from 4 p. m. to 6 p. m., 2.00 inches, making a total of 4.08 inches.—Estell Gaillard.

## ERRATA.

The following corrections should be made in the March, 1907, number of the Monthly Reports: On pages 21 and 24,

at Allendale, the total precipitation, 0.67, should be 0.65; at Clemson College, total precipitation, 3.02, should be 3.11; at Walterboro, total precipitation, 1.21, should be 1.24. On page 22, at Liberty, the maximum temperature on the 10th, 65°, should be 67°.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard.

\* On other dates also      a indicates 1 day missing, b, 2 days, etc.      ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING MAY, 1907.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR MAY, 1907.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, MAY, 1907.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., JUNE, 1907. No. 6.

## GENERAL SUMMARY.

The mean temperature was the second lowest for any June since 1894. The daily mean temperatures were below normal during the first half of the first decade, the whole of the second decade, and the last half of the third decade.

The precipitation was above normal and was well distributed thruout the month, and also geographically except that small areas in the northeastern portion had excessive amounts.

The percentage of sunshine was approximately normal.

## TEMPERATURE.

The mean temperature for June, 1907, was 75.4°, which is 2.5° below normal. The highest local mean was 79.0° at Blackville and at St. George, the lowest was 70.0° at Greenville. The monthly extremes were 99° at Blackville on the 25th and at Florence on the 10th, and 47° at Walhalla on the 28th, making the State range 52°. The greatest local monthly range was 47° at Saluda, the least was 29° at Charleston and St. George. The mean of the daily maximum temperatures was 86.1°, and of the daily minimum temperatures was 64.8°, making the average daily range 21.3°.

## PRECIPITATION.

The average precipitation was 5.92 inches, which is 1.16 inches above normal. The greatest local monthly amount was 12.38 inches at Darlington, the least was 2.22 inches at Clemson College. The greatest 24-hour rainfall was 4.22 inches at Beaufort on the 28th-29th. The average number of days with 0.01 of an inch, or more, precipitation was 10, ranging from 4 at Calhoun Falls to 17 at Santuc.

**EXCESSIVE PRECIPITATION.**—At Beaufort on the 28th-29th, 4.22 inches in 24 hours; at Barksdale on the 1st, 3.90 inches in 24 hours; at Blackville on the 28th-29th, 3.82 inches in 18 hours and 50 minutes; at Camden on the 28th-29th, 2.70 inches in 24 hours; at Clarks Hill on the 28th, 3.09 inches in 12 hours; at Darlington on the 12th, 3.22 inches in 24 hours, and on the 29th, 3.93 inches in 24 hours; at Edisto on the 29th, 3.90 inches in 24 hours; at St. George on the 29th-30th, 2.56 inches in 23 hours; at St. Matthews on the 29th, 2.68 inches in 10 hours; at Walterboro on the 29th, 2.61 inches in 12 hours; at Winnsboro on the 27th, 2.90 inches in 24 hours; at Yemassee on the 29th, 3.07 inches in 12 hours.

## WIND.

The prevailing direction of the wind was from the southwest at 19 stations, from the south and west at 9 stations

each, from the northeast at 6 stations, from the east at 3 stations, from the northwest at 2 stations, and from the north at 1 station.

**HIGH WINDS.**—At Beaufort on the 13th; at Bowman, Newberry on the 5th; at Camden on the 2d, 5th, 13th, 26th; at Charleston on the 2d; at Columbia on the 1st; at Liberty on the 5th, 14th, 15th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 12, of partly cloudy days was 13, and of cloudy days was 5.

## MISCELLANEOUS PHENOMENA.

**SOLAR HALOS.**—At Camden on the 18th; Santuc on the 7th.

**LUNAR HALOS.**—At Charleston on the 18th; at Santuc on the 26th; at Society Hill on the 25th.

**DENSE FOGS.**—At Blackville on the 10th; at Bowman on the 22d; at Darlington on the 23d, 24th; at Liberty on the 10th; at Newberry on the 11th; at Santuc on the 24th.

**HAIL.**—At Beaufort, Pinopolis on the 2d; at Blackville on the 14th; at Bowman on the 5th, 10th, 13th; at Camden, Darlington, Effingham on the 10th, 11th; at Cheraw, Winthrop College on the 11th; at Columbia on the 1st; at Liberty on the 8th, 9th, 19th; at Society Hill on the 10th, 11th, 22d; at Summerville, Trial, Walterboro on the 10th.

**THUNDERSTORMS.**—There were 192 thunderstorms noted on 25 dates, as follows: At Barksdale on the 1st, 21st, 22d, 23d; at Batesburg on the 1st, 14th, 26th, 28th, 29th; at Beaufort on the 2d, 5th, 9th, 10th, 11th, 12th, 13th, 17th, 18th, 26th, 27th, 28th, 29th, 30th; at Blackville on the 1st, 10th, 14th, 27th, 28th, 29th, 30th; at Bowman on the 5th, 9th, 10th, 11th, 13th, 20th, 27th, 28th, 29th; at Camden on the 2d, 10th, 11th, 13th, 19th, 25th, 26th, 27th, 28th; at Charleston on the 2d, 5th, 9th, 10th, 11th, 12th, 13th, 18th, 22d, 26th, 27th, 29th; at Cheraw on the 2d, 3d, 10th, 11th, 13th, 14th, 19th, 22d, 24th, 27th, 28th; at Columbia on the 1st, 9th, 10th, 13th, 25th, 26th, 27th, 29th, 30th; at Darlington on the 3d, 10th, 11th; at Georgetown on the 1st, 2d, 5th, 9th; at Greenville on the 8th, 9th, 13th, 21st, 22d, 23d, 27th, 29th; at Liberty on the 1st, 8th, 9th, 11th, 12th, 13th, 19th, 20th, 21st, 23d, 27th, 28th, 29th; at Newberry on the 1st, 8th, 9th, 11th, 19th, 22d, 23d, 24th, 27th, 28th, 29th; at Pinopolis on the 2d, 5th, 10th, 13th; at Saluda on the 1st, 2d, 13th, 23d, 24th, 28th; at Santuc on the 8th, 9th, 11th, 13th, 19th, 21st, 22d, 23d, 24th, 25th, 27th, 28th, 29th; at Society Hill on the 1st, 2d, 9th, 10th, 11th, 13th, 21st, 22d, 26th, 27th, 28th; at Spartanburg on the 23d, 24th, 27th, 28th; at Summerville on the 1st, 2d, 9th, 10th, 11th, 14th; at Trenton on the 8th, 9th, 10th, 11th, 13th, 19th, 24th, 26th, 27th, 28th; at Trial on the 5th, 9th, 10th, 13th, 19th; at Walterboro on the 10th, 11th; at Winthrop College on the 11th, 12th, 13th, 21st, 28th; at Yorkville on the 2d, 11th, 19th, 20th, 23d, 28th.

## ERRATA.

The following changes should be made in the April, 1907, number of the Monthly Report, namely: On page 29, the monthly mean temperature at Stateburg, 58.0°, should be 58.1°; on page 30, at Due West the maximum temperature on the 20th, 64°, should be 68°, and the mean maximum, 67.2°, should be 67.3°; at Stateburg, the maximum temperature on the 10th, 57°, should be 58°, and on the 24th, 73°, should be 76°; and the mean maximum, 69.7°, should be 69.8°. On pages 29 and 32, at Aiken, the total precipitation, 3.15, should be 4.15; at Saluda, the total precipitation, 3.16, should be 2.86.

## REMARKS BY OBSERVERS.

BOWMAN.—The sunshine was above normal. The rainfall was excessive during the latter part of the month. Hail fell on three dates and did some damage over small areas.—B. O. Evans. BARKSDALE.—The rainfall was excessive during the last decade. The temperature was favorable thruout the month.—J. T. Garrett. GREENVILLE.—During the thunderstorms on the 9th, there was a continuous roar of thunder lasting for 45 minutes.—Mrs. S. A. Crittenden. HEATH SPRING.—The weather was favorable thruout the month.—J. A. Weaner. LIBERTY.—The weather was warm and humid thruout the month, and was very favorable.—Jno. T. Boggs. SANTUC.—The month was rainy, but the rainfall was light until the last decade when heavy rains occurred that damaged lands by washing; otherwise the weather was favorable.—E. W. Jeter.

SOCIETY HILL.—Destructive hail fell on the 10th and 11th. The month was deficient in warmth and had excessive rainfall.—Maj. J. J. Lucas. TRENTON.—The precipitation since January 1st is 4.92 inches less than the normal for the first six months.—C. A. Long.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard.

\* On other dates also a indicates 1 day missing, b, 2 days, etc. The state of sky at 8 a.m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING JUNE, 1907.

[illegible]

At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, JUNE, 1907.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X.

COLUMBIA, S. C., JULY, 1907.

No. 7.

## GENERAL SUMMARY.

This month as a whole ranks among the warmest of all preceding Julys on record for this State. In all other respects the weather conditions were nearly normal.

The mean temperature was as high as that of 1901, which was the warmest July during the last fourteen years. The mean of the daily maximum temperatures exceeds the similar record of preceding years for the same month, by slightly over half a degree. There were two periods of unusually high temperatures, namely, from the 7th to the 10th, inclusive, and from the 19th to the 25th, inclusive. The 7th, 8th, 9th, 23d, and 24th were the hottest days, on which the maximum temperatures ranged from 90° to over 100° in all parts of the State. Thirty-one out of the forty-six stations had maximum temperatures of 100°, or higher, on one or more days.

The average precipitation was slightly below the normal. The southern half of the State had the heaviest rainfall, with the exception of a small area on the immediate coast, in the vicinity of Charleston, where it was only 32 per cent. of the normal amount. The precipitation was well distributed thruout the month. The longest periods with practically no rain were from the 5th to the 8th, inclusive, and from the 21st to the 23d, inclusive.

Occasional high winds and light hail accompanied thunderstorms but without doing any material damage.

There were fewer clear and cloudy days and more partly cloudy days than usual, tho the percentage of sunshine was approximately normal.

## TEMPERATURE.

The mean temperature for July, 1907, was 81.4°, which is 1.6° above normal. The highest local mean was 84.0° at St. George, the lowest was 76.4° at Greenville. The monthly extremes were 106° at Blackville on the 8th and 56° at Walhalla on the 15th, making the State range 50°. The greatest local monthly range was 49° at Walhalla, the least was 27° at Kingstree. The mean of the daily maximum temperatures was 91.8°, and of the daily minimum temperatures was 71.0°, making the average daily range 20.8°.

## PRECIPITATION.

The average precipitation was 5.06 inches, which is 0.55 of an inch below the normal. The greatest local monthly amount was 9.01 inches at Edisto, the least was 2.27 inches at Greenville. The greatest 24-hour rainfall was 3.54 inches at Conway on the 30th-31st. The average number of days with 0.01 of an inch, or more, precipitation was 11, ranging from 5 at Walhalla to 17 at Saluda.

EXCESSIVE PRECIPITATION.—Excessive precipitation at

the rate of 2.59 inches in 24 hours or 1.00 inch an hour occurred as follows: at Conway on the 30th-31st, 3.54 inches in 14 hours; at Effingham on the 15th, 2.00 inches in 1 hour and 30 minutes; at Georgetown on the 4th, 3.40 inches in 24 hours; at Santuc on the 25th, 2.01 inches in 1 hour and 15 minutes; at Trial on the 10th, 2.51 inches in 2 hours and 35 minutes; at Winnsboro on the 2d, 3.50 inches in 24 hours; at Yemassee on the 28th, 1.59 inches in 1 hour, and on the 30th, 1.29 inches in 30 minutes.

## WIND.

The prevailing direction of the wind was from the southwest at 20 stations, from the south at 11 stations, from the west at 10 stations, from the southeast at 4 stations, and from the northeast and east at 1 station each.

HIGH WINDS.—High winds occurred at Aiken on the 1st; at Beaufort on the 12th, 24th; at Camden on the 2d, 11th, 12th, 24th, 25th; at Charleston on the 24th; at Clarks Hill, Columbia, Summerville on the 11th; at Liberty on the 9th, 11th; at Trial on the 10th, 24th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 13, of partly cloudy days was 13, and of cloudy days was 5.

## MISCELLANEOUS PHENOMENA.

LUNAR HALOS.—Winthrop College on the 19th.

HAIL.—Hail occurred at the following stations, namely: at Batesburg on the 26th; at Liberty on the 9th, 11th; at Little Mountain on the 10th, 28th.

DENSE FOG.—Dense fog occurred on six dates, as follows: at Camden and Winthrop College on the 16th; at Heath Springs on the 15th; at Liberty on the 3d; at Saluda on the 4th; at Stateburg on the 5th; at Trial on the 4th, 31st.

THUNDERSTORMS.—Thunderstorms occurred on twenty-seven days. There were three periods of maximum frequency, namely, 2d-3d, 9th-19th, 24th-30th, when from five to thirteen of the thirty-four cooperative stations reported the occurrence of thunderstorms. None were reported on the 5th, 7th, 21st, 22d, and they were comparatively infrequent on the 1st, 4th, 6th, 8th, 20th, 23d, and 31st.

## REMARKS BY OBSERVERS.

BEAUFORT.—Altho the precipitation was 0.60 of an inch in excess of the normal at this station, nearby localities had apparently less rainfall.—S. M. Benton. BATESBURG.—The temperature was unusually high at times. Beneficial showers fell during the first and the last decades. The hail on the 26th did no damage.—E. J. Hite. BOWMAN.—Altho there were fewer thunderstorms than usually occur in July, they were more severe than ordinarily, the lightning having been very vivid. A large number of trees were struck by lightning.—B. O. Evans. LIBERTY.—The sunshine was ample and the rainfall was generally well distributed, tho a few localities suffered from excessive precipitation.—Jno. T. Boggs. SANTUC.—The month was noteworthy for the unusually large number of thunderstorms and the severity of the storms, especially for the vivid lightning and loud thunder that accompanied some of the thunderstorms.—E. W. Jeter. SOCIETY HILL.—The heat was very oppressive during the month, the maximum temperature exceeding 90° on seventeen days.—J. J. Lucas. SUMMERVILLE.—The minimum temperature on the 24th, 76°, was the warmest night since August 6th, 1903.—Miss E. H. Gadsden.

\* On other dates also.

## ERRATA.

The following corrections should be made in the May, 1907, number of the Monthly Report: On page 37, the Aiken monthly mean temperature, 71.4°, should be 71.5°; the Saluda monthly mean temperature, 70.8°, should be 70.2°. On pages 37 and 40, the Dillon total precipitation, 3.61, should be 3.21; the Saluda total precipitation, 3.54, should be 3.24. On page 38, the maximum temperature at Aiken on the 3d, 72°, should be 77°, and the monthly mean maximum, 83.3, should be 83.5; the Saluda monthly mean minimum, 59.4°, should be 57.9°.
